[end quote]

Here, CTCSS is defined as "a subaudible tone" "encoded with the voice audio at all times during the transmission."

Sure sounds like your SATS definition, and PL to me...

Quod Erat Demonstrandum

ETS is "End of Transmission Signaling". In other words, the slang term
"roger beep".

You might be confusing it with DCS..

I don't think it's a cap. Your radio has an internal voltage regulator
and that's likely the culprit. Those regulators are responsible for
the 'buzzing' of some radios when they are fed with a supply voltage
that's too high, and it sounds like your's is permanently damaged. The
reason your PA still works is because it's powered directly from the
power line, not the internal regulator.

... unless a bad cap is biasing his balanced mixer, in which case the
squeal would be produced. I saw this in a Cobra 2000 GTL once. One of
the electrolytics shorted, causing similar behavior.

In my case, however, the power mic I was using (a Turner +2 SSB) had a
bad cap in it as well, and was sending DC voltage down the audio chain,
which caused the other cap to short, which caused the squeal.

Mine didn't change pitch with the volume control, however, but this
might just be a symptom of different radio design.

These radios are designed to run at 13.8 VDC, +/- 5% or so.. 14V isn't
going to hurt the radio or its regulators.

And Galaxy/Ranger/whomever is required to use the same abbreviation as
the CMC?

DVD = Digital Video Disk
DVD also = Digital Video Downlink

Can you think of any other acronyms that mean different things depending
on the context in which they're used? There's OODLES of them.

For this CB, ETS = Roger Beep.

Why are you so eager to be proved wrong repeatedly?

....huh? The radio goes back into squelch when the signal is lost
because when the signal is lost so are the tones.

He can't properly form a complete sentence, and I'm drunken and
delirious. That's rich.

Don't push your personal life off on me, not-not-gorge. Just because you
like to "sniff toilets seat" doesn't mean everyone else does..

That should have been "you're delirious", not "your". "Your" is the
possessive form. "You're" is the contraction of "you are". I learned the
difference in Grammar School..

I've never seen that but it's possible. The reason I'm sure it's the
regulator is because I have seen the same fault lots of times in
similar radios. In fact, I'd be willing to bet that his radio uses the
same Uniden board as a TRC-453/PC-122.

The only problem with that scenario is that his PA still works. So the
shorted cap would have to be much further down the chain from the mic
and inside the area fed by the internal regulator.

>These radios are designed to run at 13.8 VDC, +/- 5% or so.. 14V isn't
>going to hurt the radio or its regulators.

I have a TRC-435 that squeals at 14 volts and a Colt 357A that won't
even power up at that voltage. Drop it down to 13.6 (or even as low as
11.5 volts) and both work just fine.

Can't see anything that looks suspect visually (caps etc), but the IC 5 (kia
7217) 5.8w amp sure gets hot when not in PA mode, theres a 7808 reg beside
this IC and the voltage is spot on 8v.
Is the input voltage reg normally a 3 pin jobby? If so I can't see it
offhand.

PA and SSB were clean on the audio on the 2000, too. It only showed up
on AM. It was odd, but replacing that cap (actually, I replaced all the
caps in the audio and mixer chains, just to be safe, after I replaced
the one and tested the rig) fixed the problem.

That would be it. Put the voltmeter on AC (yes, AC) and measure it.

So that would be the "internal modifications" rule..

If the radio is type accepted, and comes with such a thing as a power
control from the factory, then it's not internally modified, and
therefore not illegal.

Quod Erat Demonstrandum.

Yeah, that's pretty strange alright! Was it a DC block or a supply
bypass cap?

A lot of radios do it. Just turn up the juice and start running them
through the bench. You'll see what I mean.

Ok, i've measured 1Vac across the output of that 7808 reg, is that cool?
Also the schematic says at the bottom "Hatadi super cheetah", I could post
this (the schematic) on my website or email to anyone who's interested in
taking a look.
Thanks your help so far too guys!

One of a couple of things is happening here..

Either your power supply is going to pot (disconnect the radio and measure the AC voltage across + and -) or the regulator (or one of its filter caps) is going/gone bad.

And that's for starters.

Check your power supply first. If the AC voltage across the outputs isn't VERY close to 0 volts, then it's time for a new power supply.

If it's at or close to 0 volts, the power supply is probably OK, and the problem is in your radio. How handy are you with a soldering iron? Got any test equipment besides a VOM?

Caps pass AC, but not all AC.. like any LC or RC circuit, some
frequencies are filtered and/or blocked, and others are allowed to pass.
Just because there isn't an inductor or a resistor in a circuit doesn't
mean it lacks L or R...

Sorry, didn't mean to be so vague.

Right on the money. There should be no more than a few (less than 10)
millivolts AC at the output of that regulator. You will need a scope
to find the source of the fault.

Righto, The power supply is about a month old, but I checked it anyway, VOM says millivolts AC ripple.
I will check filter caps tomorrow once its daylight.

I'm fairly handy with a soldering iron, have made a few electronic gadets over the years (cystral set at age 8 :))
I only have a FET VOM and a digi VOM, no scope unfortunately.

I can't find any reference to a specific rule that either allows or
prohibits adjustable power.

On the one hand, if it were legal, you would think that more radios
would utilize this "feature" as a selling point.

On the other hand, many hand held radios are equipped with "hi/lo"
power switches.

In the mid 60's, a few Lafayette models had a 5W/100mW switch on the
back. But the selling point for those was that they used to claim that
you could operate your radio on the 100 mW position before your
license came back in the mail. The FCC later clarified part 15 so that
the antenna had to be self contained and less than 5 feet in length.
So that pretty much killed that purpose of that switch, and it
disappeared with the next models.

>FRS radios have such tones because they are permitted by this rule:
>
>"Sec. 95.193 (b) The FRS unit may transmit tones to make contact or
>to continue communications with a particular FRS unit....."
>
>CB radio has an identical rule:
>
>"Sec. 95.412 (b) You may use your CB station to transmit a tone
>signal only when the signal is used to make contact or to continue
>communications....."

But you failed to print the entire rule subpart. Why this is
significant I will explain after I post it in its entirety:

"(b) You may use your CB station to transmit a tone signal only
when the signal is used to make contact or to continue communications.
(Examples of circuits using these signals are tone operated squelch
and selective calling circuits.) If the signal is an audible tone, it
must last no longer than 15 seconds at one time. If the signal is a
subaudible tone, it may be transmitted continuously only as long as
you are talking."

Now, when you look at the rule, it becomes clear what the intent of
this rule is. They are defining selective calling units, that operate
either with CTCSS or dual tone (paging style) squelch systems.
Lafayette used to sell them from the 1960's into the early 70's.

You might be able to infer that this rule also applies to roger beeps,
but you have to remember that this rule was written long before roger
beeps were even heard of on CB radio communications.

I will concede that the rule is open to a wide variety of
interpretation. It is conceivable that you MIGHT be ok if you use the
roger beep strictly as an ETS signal. The minute you start making
multiple tones, musical notes or otherwise, you fall into the category
spelled out by 95.413, prohibited transmissions subpart 6 and 7:

(6) To transmit music, whistling, sound effects or any material to
amuse or entertain;
(7) To transmit any sound effect solely to attract attention;

>So it should be obvious that if any radio with a "roger-beep" is
>accepted, the tone is considered to be a tool that is used to
>-facilitate- communications, a purpose which is consistent with the
>above rule(s).

The question remains, with the exception of the Galaxy, there are no other domestic radios with this built in feature. If the rule was so cut and dry, then why not add another selling point?

>And another fact: I brought this same issue to your attention almost a >year ago..... in -THIS- newsgroup.

I remember the discussion. I believe it was Bert who provided the picture of his Galaxy radio with the FCC ID number which you initially looked up and couldn't find, and then claimed that the radio's Roger beep was an "add-on" accessory..

That was back when you were on my side, before you found out that I'm one of those "evil" capitalist loving conservatives who still believes in personal responsibility.

said......

Damn dude, that copy sucks! Try scanning it in grayscale (256 colors),
300 dpi, then reduce it to 16 colors and save it as a .gif file.

Now. Yes it looks like the regulator is the place to start. Disconnect
the output and measure AC ripple. If it's more than a few millivolts
then the regulator is toast. If it's smooth then you have an
oscillation somewhere else and you will -NEED- a scope to find out
where it's coming from.

BTW, make sure that all your power devices have good heatsinks. Those
gray plastic insulators are crap, and quite a few manufacturers
mistakenly use the "more is better" rule for heatsink grease (and
solder, too). I only mention this because of your observation that the
AF amp gets hot. It shouldn't. Not unless you are "peaked & tweaked"
for overmodulation.

I'm not familiar with the radio mentioned. Does Pierce Simpson still
make radios? I'm assuming it's an old 23 channel classic.

With old radios like that, the problem is almost always related to
caps drying out. I once had an old 23 which would receive, but along
with the receive audio was a squeal. The squeal would change pitch and
volume when the volume control was advanced. The problem turned out to
be a bad cap in the audio stage just after the detector.

>cut and dry, then why not add another selling point?

How about because the service was intended to be a cheap-&-easy way to
get 2-way radio comm? There were literally hundreds of models WITHOUT
a control for RF gain, delta-tune, SWR, etc, etc. And the FCC used to
cite people for nothing more than failure to comply with the time-out
rule. So would -you- have included it in a radio? I doubt it.

>>And another fact: I brought this same issue to your attention almost a
>>year ago..... in -THIS- newsgroup.

>in personal responsibility.

I'm still on your side, Dave. The difference we have is that you
refuse to look at -political- issues from both sides of the coin.
Apparently your problem is migrating to CB issues; i.e, your false
claim about me stated above.

Dave, when will you learn to just keep your trap shut when you don't
know what you are talking about? I have antique radios from the 1920's
and up that still have good capacitors. They start having problems
when they are pushed over their rated voltage or physically leak; and
most electrolytics made since the 50's don't use liquid electrolyte.

The only thing you can check is if they are shorted, and that doesn't
always work if they are still in the circuit. If you really want to go
that route then unsolder all electrolytic caps and rig up a charging
circuit (battery + high-value resistor). Trust me, it's a bigger pain
than taking it to the shop.

There shouldn't be any confusion -- Twisty defends illegal radio and I
oppose it. But that doesn't answer the question: Did you make a
mistake?

I have read the about the amazement of acceptance while including adjustable power. Dunno, it is bone stock 4/12 watts. I have heard form others that it is a BEAR to get more channels out of, etc.

It IS a good CB RADIO though. I think it sounds great, really natural and has excellent receive. Sideband performance is suprising for a Galaxy although it did need a frequency allignment from the get-go and am

modulation was low (limiter slammed with a tone and only doing about 80%)

Microphone preamp is very sensitive, no NEED for a power mic but a better sounding dynamic is in order to get the best fidelity. With the stock mic I keep the mic gain at about 1 o'clock to keep the limiter from pumping.

They are not cheap but it has been a good, robust radio thus far.

For the record I would trade my roger beep for an unlocked clarifier in the law books, anyday, hands down :)

I THINK the 959 and 949 is the same radio as the 2547, the 2547 is a mobile in a big case.

Could not find them using the C2R prefix but there is a bunch. That board is used in a bunch of radios and has a PLL that does not like to be modded, I think that made the FCC happy. Iroic that there IS spots on the board for another final and support components, a simple call to Galaxy and you can have a dual final radio in less than an hour. OOPS!!!!!

Chad

Looks like the 2537 (vaporware) was a 949 as it does not have the freq counter.

OMG!!!!
Frank has an attitude, he's sometimes pompous, arrogant,
but that doesn't make him "On anyone's side".
I've had issue's with Frank in the past and will have them in the
future, that's a give me, but to come out here and say "My
side", that's a hoot!
A DD214 is a DD214, no matter how you try to dissect it
Dave, so if it says Kerry was discharged, he was discharged.
If federal government records show Kerry's service records,
then it's up to you to prove they were forged (To which I
think no one was contesting they weren't real, just the timeline).
Now like you, I don't like Kerry but at the same time I don't
think Bush is much better, but "I" felt he was the lesser of
three evils, so I voted for Bush.
One thing I've seen about Frank as of late, he doesn't
seem to let his emotions do his talking. He will say what
he believes, without prejudice to which is a very tough thing
to do.

Landshark

They are exactly the same radio. Same board and all. The 949 doesn't have a
frequency counter. None the less, they are approved by the FCC, because they are
not exports. They do their 4 watts. And the channel mods require a hell of alot
more than a solder bridge.

Correct. This was rather pricey. I think upwards of $60, but not sure. It was almost more economical to get a small amp.

Nah, less than 10 bucks and some time if you have the know how to bias out
that second final, best to buy two matched, still less than 10 bucks. But
big deal you gain another 10 watts :)

Because they are idiots, like all keyclowns are. One time I was on 2 meters FM talking when a keyclown looked at my watt meter and said..."Damn, man...you aint got no swing at all!" I sent him to see mopeydopey, then he REALLY swung!

But that is in parts cost. I don't recall exactly, since I don't own the radio anymore. If you can get to a local supply, I am sure it's $10. But if you oder online, many places have minimum orders, and if you order from mulitple places, you get nail for mutliple shipping and handling. In one case, the handling was somewhere near $10 for orders under $25. Here is a good example:

http://www.rfparts.com/usorder.html

I wish I had a local supply house.

I am very lucky to work for and live in a town with one of the largest
Engineering Universities, I walk 3 blocks and get what I need! I need a
smoke break, I walk to EE stores!

If I need to order from a specialty house such as RF Parts I will contact others and get a big order to help absorb shipping costs. I am always ordering from somewhere and really never order in small quantities. As for small common parts, I have those in stock at home from doing audio repair.

So, you are right, for a one time job shipping will eat you alive!

Your deficit, Dave, is hurting you. Pay attention: "Is known" by the pros, Dave. How does one get known, grasshoppah? By their history. Historically, Pittsburgh is known for not covering the spread. Citing the single exception (this year) to the rule is nice, but has nothing to do with the pros picks and how the team is viewed in such circles. Now pick yourself up and cscrape yourself off from my shoe.

Your "side" indicates an intentional adversarial position. Everything isn't right or wrong and this side or that side of an issue...seeing everything as black and white is myopic. Stop looking for "sides" in which to take and stand on your own feet....for once.

(I did, and don't call me Twisty. Are you saying that you made a mistake
by claiming you were referring to an illegal modification instead of a
factory design feature?)

Insertion of a fact, here.....he didn't write twisty anything.

>No you most certainly are starting to become

>twistys clone I actually thought he might have

>been forging you.

Illustrating that you really are incapable of acquiring new knowledge,
even when it's given freely to you. Webtv can't forge. Webtv can not
change the user name for usenet without changing it across the board,
and even then, the webtv headers remain and so does their IP number. You
may now re-immerse yourself forging mopar and forging my headers to
suit your agenda. You have been effectively and permanently reduced,
Dave.

>Actually I was confused

(There shouldn't be any confusion -- Twisty defends illegal radio* and I
oppose it. But that doesn't answer the question: Did you make a mistake?
)

*Too much of a blanket statement. I share my feelings only when asked of
such actions...I guess some can view that as a defense, but a defense
can come only when one is on the receiving end of another who brought
confrontation or attack.
Let there be no doubt of what constitutes "illegal radio" in my
world.... talking dx and the occasional freebanding on select
frequencies located in the freeband, only. No other unlawful activity is
"defended" or participated.

That's typical of most out of the box CB radios. The limiters are
usually set conservatively at 85% max.

I'm with you on that one. Until they can find a way to phase lock
everybody's transmit frequency to an exact standard, there will always
be a slight variation in frequency, which you will have to adjust to
every time a different station transmits, if everyone has a "locked"
on transmit receive-only clarifier. When running a roundtable on SSB,
it becomes very annoying in short order.

It would be helpful for you to read my entire point before snipping
the parts that change the context. If you had, you would have seen
that I had "convicted" nothing. I was only bringing up two sides of
the issue.

You are adopting Twisty tactics.

You really are sore aren't you?

It's not really beyond the DX2547's limits. There's an ample power supply in there and the board is already punched, labled and wired for another final, just needs support components and biased up.

But as stated earlier the gain in power is not really worth the hasle, and not enough to drive a high drive amp.

More of a bragging right I guess.

Btw, for the technician it is a wonderful radio to work on. The top and bottom comes off like most mobiles and it's wide enough to sit on it's side and work on both sides. Only have to clip 2 nylon ties holding the speaker cable in. There's plenty of room and the super razor sharp edges are kept to a minimum. I was pleasantly suprised when working on it, the manual is also very easy to understand and comprehensive.

Chad

So why do all the libs cry that Bush's honorable discharge was somehow
"bought"? See, both sides can make up all sorts of stories to explain
the "facts".

But I digress, this thread is not about politics.

I NEVER heard a roger beep on CB until the early 80's. They certainly
were not around in 1970 when I first got on the band.

Now, I'm not saying that some clever tech type didn't invent one, and
used it in some local pocket somewhere. But their use was not
widespread, or I would 've heard them it, especially when the skip
rolled in.

None of this is valid today. Even if you despise the art of marketing and capitalism, the fact remains that bells and whistles sell products. A roger beep is not a difficult thing to add to a radio (and not expensive), yet it will add perceived value as another "feature" to justify an increased price for.

Besides, I never said that *all* radios should have it. But yo would think at least the flagship radios from all the big name manufacturers would include this "feature" as another sale item.

Well, by golly, I goofed again. The FCC ID number is C2R-DX-2547, it's
a Ranger, and it is legal for CB. But what I didn't see on the Galaxy
website was a built-in roger-beep -- instead the board is available as
an accessory.

I'm not the one displaying binary thinking. I never claimed that
issues are either ones or zeroes. But there is an overall difference
in philosophy between one "side" and the other, a cumulative sum of
all the individual "issues".

As part of Narcissistic Personality Disorder, it is common that since suffers view themselves as always right, they therefore cannot fathom how so many people can disagree with them. So in order to justify your position, you tell yourself that the many people who find you to be "a few fries short of a happy meal", are really one or two people pretending to be all the others. It offers you a security blanket of self-justification for your belligerence and haughty behavior.

Frank, I'm getting a little tired of your tone.

I've had tube radios where the filter caps exploded with the force of
a firecracker, after not being powered for 10 years or more. In fact,
if you check with the pros who restore old radios, they recommend
replacing aging caps since they are known to change value. They also
recommend that you power up an old radio gradually with a Variac, so
as to no "shock" an old cap into shorting.

> They start having problems
>when they are pushed over their rated voltage or physically leak; and
>most electrolytics made since the 50's don't use liquid electrolyte.

I'm telling you what I've personally experienced in close to 30 years
of repairing CB radios. It is COMMON for small 1uF and such
electrolytic caps to open up from age. I just got done retelling an
exact problem that I once fixed. Now, either you are calling me a
liar, or you need to modify your statement, since my examples are
proof that maybe you should keep your trap shut, since CB radios don't
seem to be your high point in experience.

Hey-

Check out this great site that is giving away totally FREE Desktop PCs!

I've joined and I think you should as well.

It's a completely legitimate offer, and this company has already given away $4 million in FREE stuff!

All you have to do is join, complete an online offer, and refer friends to do the same. That's it!

Here is my referral link. To help me get my Desktop PC, click this exact link to join, or copy and paste it into a browser: http://www.FreeDesktopPC.com/?r=13995904

This is my best second free computer.Its super easy. Just pick something you can cancel. The blockbuster thing is good. I used the Efax thing. I got a free fax number for a couple weeks and it got me a computer. I just did it again for this second attempt at a new computer. Good times.

Or, if you suspect it's a cap, just replace all the caps in that
circuit. A little more trouble, but allot cheaper than sending it to a shop.

If you're going to replace the caps in your regulator circuit, replace
the regulator as well.

One thing you can do to test a cap is to LOOK at it. If the top is bowed
out like a dome, or there's some brownish crusty ichor on the top or
bottom of the cap, it's bad.

Barring that, replace the regulator, and follow the schematic to find
the caps in that circuit to replace them all.

Or if the AF amp is going bad.. An internal short could cause that kind
of heat, too.

Frank:

Not to jump into this fray, too, but the reason my Swan 350D isn't
functional right now is specifically because the caps have "dried out"..
it DOES happen. It's not as rare as some people think.

check the supply voltage to the af amp...if the voltage is too low it can
make the squeeling sound varying with the af gain control. this low voltage
could be caused by a resistor that supplies bias to the af amp breaking down
under increasing current drain. a common problem.

You're describing what your poor children do, when you deprive them of food
and clothing.

Now answer the questions:

1. How is the court ordered shrink working out for you?

2. How's the court ordered job hunt going?

3. How's the court ordered wage withholding going?

4. Have you made the rain report for jamming repeaters again, Doug?

5. Have you threatened to kick anyone elses ass, only to have them show
up at your section 8 slum and prove what a fucking coward you are, maggot?

http://n8wwm.4t.com/

Go lay down by your bowl,

*CASH*CASH*CASH*

Posted By: B (205.188.197.157)
Date: 01/02/05

Turn $6.00 into $42,000...read this to find out how!!! READING THIS COULD CHANGE YOUR LIFE! I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of cash within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting cash in the mail! I was shocked! I figured it would end soon, but the cash just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more cash than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the cash come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy

to pay big bucks for quality lists. However, the cash made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

1) Nathan Gilreath 6049 Porter Ave. East Lansing, MI 48823

2) Beth Collins 1012 Woodbine Ave., Toronto, Ontario M4C 4C1

3) Melody McKinley 8 Huntingdon Drive Dartmouth, Nova Scotia B2V 1w1

4) C. Witt 12 Pine ST. Attleboro, MA 02703

5) Ben Ervin 1281 Cadillac Dr. Hamilton, OH 45013

6) D J Kelly 661 powell st apt # 3 Brooklyn Ny 11212

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more cash you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need cash, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the cash that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of cash in CASH!!! What an opportunity for only

$6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE Cash YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving cash from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625.00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the cash? So what! What are

the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will really work.

THIS IS REAL...TAKE YOUR TIME AND READ THIS.....NOBODY IS SCAMMING YOU
THE 5 MINUTES IT WILL TAKE YOU TO READ THIS WILL CHANGE YOUR FUTURE!

I'm sure you've read these letters asking you to send $1 to six different addresses. Putting your home address or mailing address on the internet can be risky, but through PayPal all you have to provide is your email address. It's safe and easy. Just go to WWW.PAYPAL.COM and set up your FREE account! No credit card is needed. I am not a gullible person and have never trusted things like this, but I gave it a try. Hey it's only $6. I figured at least 6 people would respond out of the millions of people that use the internet. You should give it a try too! You have nothing to lose, and thousands to gain! Read on for the letter that I found (of course, I added my PayPal e-mail on #6)...

HOW TO TURN $6 INTO $6,000+!!! THIS REALLY CAN MAKE YOU EASY MONEY!!!

IT WORKS!!! BUT YOU HAVE TO FOLLOW IT TO THE LETTER FOR IT TO WORK!!!!

A little while back, I was browsing through newsgroups, just like you are now and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah, right, this must be some kind of scam" but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 though PayPal to each of the emails stated in the article. You then place your own email address in the bottom of the list at #6, and post the article in at least 200 news groups. (There are thousands) No catch. That was it. So after thinking it over, and talking to few people first, I thought about trying it. I figured what have I got to lose except $6.00, right? Like most of us I was a little skeptical and a little worried about the legal aspects of it. It follows the same regulations as the "mailed chain letters, which according to the U.S. Post Office (1-800-725-2161) is indeed legal! Then I invested the measly $6.00. Well GUESS WHAT!!? Within 7 days, I started getting money in my PayPal account! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $20.00. By the end second week I had made a total over

$1,200.00!!! In the third week I had over $10,000.00 and it's still

growing. This is now my fourth week and I have made a total of just over $36,000.00 and it's still coming in rapidly. It's Certainly worth $6.00. I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works? Also, make sure you print a copy of this article now, so that you can get the information off of it as you need it.

$$

REQUIREMENTS: You must have a confirmed PayPal account. If you do not have a PayPal account you can go to www.paypal.com and follow the instructions to set up a free account. In order to place the initial $6 into your account, you will have to confirm your bank account with PayPal (which may take a few days). PayPal is 100% secure and is used my millions of people world wide. Confirming a www.paypal.com account simply means (1) PayPal will first ask you to confirm the email you used to sign up your PayPal account by sending you an email with a link for you to click to that email. As soon as you click that link your email is confirmed. (2) PayPal will then make two small deposits into your bank account if you set up your PayPal account with a checking or savings bank account. Or PayPal will make two small deposits to your credit card if you set up your PayPal account with your credit card. Then after a few days (it takes up to a few days for these deposits to appear in your bank account or on your credit card statement) then after a few days you go back to the www.paypal.com website and sign in. Then you click where it says this account is not yet confirmed. A screen will pop up that gives you 2 boxes to fill in. You then enter the numbers of the 2 small deposit amounts (two separate 2 digit numbers) that were deposited to your bank account or credit card. Now you have a working and confirmed PayPal account and can receive payments.

$$

[STEP 1]
Send, though PayPal, $1.00 to each email on the below list. Make the subject of the payment "Email List" and in the comments, write "PLEASE PUT ME ON YOUR EMAIL LIST." What you are doing is creating a service by this - and best of all you are not giving your address to anyone you do not know. THIS IS ABSOLUTELY LEGAL!! YOU ARE CREATING A SERVICE. Here are the latest PayPal e-mails on the e-mail lists:
#1) bigmicrosoft @ yahoo. com

#2) mr_skunky29 @ yahoo. com

#3) bmedsker @ cablespeed. com

#4) honesteyez @ yahoo. com

#5) spontaniuz @ msn. com

#6) dholla @ hotmail. com

www.paypal.com

Subject of Payment: ***Email List***

Comments: ***PLEASE PUT ME ON YOUR EMAIL LIST***

[STEP 2]
Now take the #1) email off the list that you see above, move the other addresses up one (6 becomes 5 & 5 becomes 4, etc) the put YOUR email address (the one used in your PayPal account) as #6) on the list. **MAKE SURE THE EMAIL YOU SUPPLY IS EXACTLY AS IT APPEARS IN YOUR PAYPAL ACCOUNT**

[STEP 3]
Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups, message boards, etc. (I think there are close to 32,000 groups) All you need is 200, but remember, the more you post, the more money you make - as well as everyone else on the list! In this situation your job is to let as many people see this letter as

possible. So they will make you and me reach!!!! You can even start

posting the moment your email is confirmed. Payments will still appear in your PayPal account even while your bank account is being confirmed.

$$

DIRECTIONS ON HOW TO POST TO NEWSGROUPS/MESSAGE BOARDS.

[Step 1]
You do not need to re-type this entire letter to do your own posting. Simply put your CURSOR at the beginning of this letter and drag your CURSOR to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into your computer's temporary memory.

[Step 2]
Open a blank Notepad file and place your cursor at the top of the blank page. From the 'Edit' menu select 'Paste'. This will paste a copy of the letter into notepad so that you can add your email to the list.

[Step 3]
Save your new Notepad file as a .txt file. If you want to do your postings in different sittings, you'll always have this file to go back to.

[Step 4]
Use Netscape or Internet Explorer and try searching for various newsgroups, on-line forums, message boards, bulletin boards, chat sites, discussions, discussion groups, online communities, etc. EXAMPLE: go to any search engine like yahoo.com, google.com, altavista.com, excite.com, then search with subjects like "millionaire message board" or "money making message board" or "opportunity message board" or "money making discussions" or "business bulletin board" or "money making forum" etc. You will find thousands and thousands of message boards. Click them one by one

then you will find the option to post a new message.

[Step 5]
Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting 'Paste' from the 'Edit' menu. Fill in the Subject, this will be the header that everyone sees as they scroll thru the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations! THAT'S IT!! All you have to do is jump to different newsgroups and post away. After you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS AND/OR MESSAGE BOARDS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money within days! **JUST MAKE SURE THE EMAIL YOU SUPPLY IS EXACTLY AS IT APPEARS ON PAYPAL.**
Have fun!

Is the Radio Shack/Realistic HTX100 10M transciever, any good?
I'm thinking of buying one.
Cheers

1299. Re: Content Control

Only YOU are the ONE that is interested in man on man sex.
No one else has even asked you for man on man sex.

Take your mess back to your own newsgroup and Quit cross-posting to this NG!

You don't OWN me, NOR,
Do you CONTROL me or Anyone Else on this here Newsgroup!

So, ya better take yo retarded ass on somewhere!

Ain't nobody gonna listen to you, anyway......so you can post all you want,
but we're just gonna delete ya and forget ya - as if you were never there!

This is a CB radio newsgroup -- not a porno group!!

There are users here that have been monitoring your activity as they have
elsewhere.

It's performance is a little "Wimpy".....you would much better off with a
Icom 706-MKII-G
MUCH more radio, not a whole lot more money considering what it will do.
just my 2¢ worth (I have a HTX-10 and 2 '706's)

I really don't care.

>I've had tube radios where the filter caps exploded with the force of
>a firecracker, after not being powered for 10 years or more. In fact,
>if you check with the pros who restore old radios, they recommend
>replacing aging caps since they are known to change value. They also

>as to no "shock" an old cap into shorting.

Caps wear out, that's a fact. And caps do explode on occasion. But in
every case where I have filled the shop with that unique and pungent
aroma there has -always- been some underlying cause of the failure,
such as too much AC on a filter cap, voltage ratings exceeded or
reversed, etc. I've never had one blow up just out of spite.

Also, I -am- one of those "pros who restore old radios", which has
been both a hobby and a business since I restored my first Philco 20
when I was a teenager. And after being in the electronics business
professionally for 30+ years I can say, without any doubt whatsoever,
that capacitor failure rate (i.e, the capacitor being the -primary-
cause of the failure) is no higher than for any other component. I do
-not- recommend blanket replacement of aged capacitors -- on the
contrary, I recommend -testing- aged capacitors. If they are still
within tolerance and show no DC leakage, leave them ALONE!

BTW, for anyone planning on testing caps, you don't need anything
fancy. Just find an old R/C tester like the Eico 950. I have used an
old tube-type Knight R/C tester for 20 years and it hasn't failed me
yet.

>liar, or you need to modify your statement, since my examples are
>proof that maybe you should keep your trap shut, since CB radios don't
>seem to be your high point in experience.

Your examples are proof of nothing except your lack of experience in
the broad field of electronics and your inability to find the
underlying cause of the failure. Cap failure as the -primary- cause of
failure is no more common than a weak transistor, bad IC, blown
diode/zener, or bad RF/IF can, or even poor manufacturing standards.

Swan was notorious for using cheap PS caps. Haven't seen one yet that
wasn't bad or on the edge. I had a 500 and I replaced the cap with an
-older- cap -- still works great according to the guy who has it now.

>of heat, too.

True. I looked at the schematic again and both the input and output
are DC blocked. If those were bad then the amp wouldn't work at all.
There is another cap on the side that may either be for offset or
compensation, and if that's shorted it may cause the chip to overheat.
That would be my first guess. But it still doesn't explain the squeal.

What I -didn't- see before is that the preamp before the PA is powered
directly from the regulator, so the regulator is good. The oscillation
must be coming from somewhere else.

I did indeed read the entire post. I snipped it where I did because it
was at that point where you presumed something that has yet to be

proven. The rest of your point has been addressed in other posts.

>You are adopting Twisty tactics.

Not at all. Twisty's approach is psychological, something along the lines of how a cop or lawyer badgers a suspect until he slips up. My forte is logic. And because of those differences it should come as no suprise that my arguments with Twisty usually end in a stalemate since our respective methods are diametrically opposed in both concept and practice.

>You really are sore aren't you?

I am really disappointed. For a person who otherwise demonstrates a higher-than-average intelligence and a sound grasp of logic, you just throw all that out the window when it comes to politics. What a waste.

There you go with the labels again.....

> cry that Bush's honorable discharge was somehow
>"bought"?

Maybe because he was pushed to the front of the line of the selection committee? And was accepted into the NG the day (or day after) he applied? Maybe because the records show he couldn't even keep a doctor's appointment that was required to fulfill his military obligations (he was a pilot, remember?)? Or maybe because for several months the only record of him fulfilling his duties is his pay records which the Pentagon (under the direction of Rumsfeld) suddenly produced after twice claiming no more records existed? And unlike Kerry, where his shipmates are in disagreement about his nature of service but all agree that he was indeed there, NOBODY remembers Bush being present at one of his assigned duty stations.

It's an 'inductive' argument, Dave, and it's pretty strong.

Yet you claim the same agency (the Pentagon) is responsible in a conspiricy to conceal records that are damaging to Kerry without any reason, subjective or objective, other than the fact that the records have not been released, and -despite- the fact that there is no law that requires him to do so, not even under the FIA.

You -still- don't see how stupid that sounds, do you?

> See, both sides can make up all sorts of stories to explain
>the "facts".

Those aren't made-up stories, Dave. If you can't see how the facts are
related to each other then here's what you need to do: Next time you
are at the store go to the magazine stand. Look for the section with
all the kiddie puzzle books. Pick one with a lot of connect-the-dot
puzzles. Buy it. Take it home and practice. When you finish that,
watch Sesame Street and pay careful attention when you hear the song
with the words, "Which one of these things is not like the other?"

>But I digress, this thread is not about politics.
>
>>>> e.g., the fact here is that you are
>>>>looking at the wrong rule:
>>>
>>>Am I?
>>>
>>>>
>>>>
>>>>>This is where the controversy is. Your assessment is valid, and it
>>>>>would seem that since the FCC has allowed ETS signals on FRS radios,
>>>>>(which also fall under part 95) that it would also stand to reason
>>>>>that they would allow them on class "D" CB as well. The question is
>>>>>why have they not made their position clear in the form of a rule
>>>>>modification?
>>>>
>>>>
>>>>FRS radios have such tones because they are permitted by this rule:
>>>>
>>>>"Sec. 95.193 (b) The FRS unit may transmit tones to make contact or
>>>>to continue communications with a particular FRS unit....."
>>>>
>>>>CB radio has an identical rule:
>>>>
>>>>"Sec. 95.412 (b) You may use your CB station to transmit a tone
>>>>signal only when the signal is used to make contact or to continue
>>>>communications....."
>>>
>>>
>>>But you failed to print the entire rule subpart. Why this is
>>>significant I will explain after I post it in its entirety:
>>>
>>>
>>> "(b) You may use your CB station to transmit a tone signal only
>>>when the signal is used to make contact or to continue communications.
>>>(Examples of circuits using these signals are tone operated squelch
>>>and selective calling circuits.) If the signal is an audible tone, it
>>>must last no longer than 15 seconds at one time. If the signal is a
>>>subaudible tone, it may be transmitted continuously only as long as

>>>you are talking."
>>>
>>>Now, when you look at the rule, it becomes clear what the intent of
>>>this rule is. They are defining selective calling units, that operate
>>>either with CTCSS or dual tone (paging style) squelch systems.
>>>Lafayette used to sell them from the 1960's into the early 70's.
>>>
>>>You might be able to infer that this rule also applies to roger beeps,
>>>but you have to remember that this rule was written long before roger
>>>beeps were even heard of on CB radio communications.
>>
>>
>>Bullshit. Roger-beeps have existed, legal or not, on the CB since the
>>band was barely a few months old.
>
>I NEVER heard a roger beep on CB until the early 80's. They certainly
>were not around in 1970 when I first got on the band.
>
>Now, I'm not saying that some clever tech type didn't invent one, and
>used it in some local pocket somewhere. But their use was not
>widespread, or I would 've heard them it, especially when the skip
>rolled in.

I don't know what corn field you lived in in 1970 but roger-beeps were
pretty common around here. And I'm sure that anyone on the CB scene in
NY at the time would tell you the same thing. Noise-toys (and other
minor violations) were frequent subjects in magazines such as PE and
QST which covered the CB from day one; and most of them describe their
widespread nature and general abuse of the band.

But because -you- never heard a roger-beep that means they didn't
exist. Once again you have declared something to be fact based on your
opinions. Ok, Dave. Whatever you say.

>>>I will concede that the rule is open to a wide variety of
>>>interpretation. It is conceivable that you MIGHT be ok if you use the
>>>roger beep strictly as an ETS signal. The minute you start making
>>>multiple tones, musical notes or otherwise, you fall into the category
>>>spelled out by 95.413, prohibited transmissions subpart 6 and 7:
>>>
>>>
>>> (6) To transmit music, whistling, sound effects or any material to
>>>amuse or entertain;
>>> (7) To transmit any sound effect solely to attract attention;
>>
>>
>>Damn liberals.
>
>You really have become consumed with politics. Have I rattled you that
>much?

You probably shouldn't flatter yourself over your ignorance of
political issues. Did you find out who the Vulcans are yet? Or are you
going to claim that they don't exist because you never heard of them?

>>>>So it should be obvious that if any radio with a "roger-beep" is
>>>>accepted, the tone is considered to be a tool that is used to
>>>>-facilitate- communications, a purpose which is consistent with the
>>>>above rule(s).
>>>
>>>The question remains, with the exception of the Galaxy, there are no
>>>other domestic radios with this built in feature. If the rule was so
>>>cut and dry, then why not add another selling point?
>>
>>
>>How about because the service was intended to be a cheap-&-easy way to
>>get 2-way radio comm? There were literally hundreds of models WITHOUT
>>a control for RF gain, delta-tune, SWR, etc, etc. And the FCC used to
>>cite people for nothing more than failure to comply with the time-out
>>rule. So would -you- have included it in a radio? I doubt it.
>
>None of this is valid today.

Cop-out.

> Even if you despise the art of marketing
>and capitalism,

I never said anything of the sort. You don't even understand how your
own mind works: You extrapolated that trait on me from your image of a
stereotypical 'liberal', which is a label that -you- gave me for other
reasons. You sound like a third-rate psychologist.

> the fact remains that bells and whistles sell
>products. A roger beep is not a difficult thing to add to a radio (and
>not expensive), yet it will add perceived value as another "feature"
>to justify an increased price for.

You of all people know that a manufacturing decision is based on a lot
of factors. The question is if the additional sales could justify the
extra cost, which would involve a market analysis. That analysis would
also include a comparison with competitive products; i.e, aftermarket
noise boxes, boards and mics. There is also the issue of whether or
not the FCC would pitch a bitch even if the design changes would be
technically legal but contrary to FCC policy, which would involve a
hassle in the courts (and expensive attorney fees). Then there is the
product liability issue: What would be the legal expenses defending
the company from pissed-off consumers who got an NAL when the FCC
popped them for using the roger-beep function?

Do you have those analyses, Dave? If you don't then you -don't- have
the facts and are just speculating.

>Besides, I never said that *all* radios should have it. But yo would
>think at least the flagship radios from all the big name manufacturers

>would include this "feature" as another sale item.

You go ahead and email them with that question. Until you get a
definitive response your opinions are nothing more than speculation.

>>>>And another fact: I brought this same issue to your attention almost a
>>>>year ago..... in -THIS- newsgroup.
>>>
>>>I remember the discussion. I believe it was Bert who provided the
>>>picture of his Galaxy radio with the FCC ID number which you initially
>>>looked up and couldn't find, and then claimed that the radio's Roger
>>>beep was an "add-on" accessory..
>>
>>
>>I made no such claim. Look up the thread and read the FACTS, Dave.

I really don't care about your political leanings or religious
beliefs. But if you are going to "expose" people for telling lies and
making up stories to attack those who don't share their beliefs then
don't whine when you are exposed for doing the same.

Forget about Dave. Go hit some yard sales and find yourself a scope! I
stopped by a sale last fall and picked up an immaculate Heathkit 4550
for..... are you sitting down?..... $10. They are out there, you just
have to look.

Which one? the TX800? or the newer version 500?
It doesn't matter, NO. I gave the TX to a very good
friend that moved back east a couple years ago.
The 500 got loaned out and for some strange reason, it
never made it's way home.

OT. I still say Bush is making a HUGE mistake by not announcing some sort of
exit plan.
If the Republican party wants another Man in the office,
he'd better get a plan going. The more of our people that
die over there, is just another nail in the coffin for a
Republican candidate to take office in 08.

Here's a pretty good site! Make sure you click on Second Term.

Bummer. Voobner has finally talked me into getting my ticket, so I'm
going to start picking up some HF equipment. I remember some time back
you saying something about a closet full of amps so I thought I would
ask.

I'm not so sure he really wants to exit Iraq. Either way, I think his
biggest mistake right now is the inaguration hoopla -- do we really
need NINE official balls while our troops are getting -their- balls
blown off daily in Iraq? Bad form.

As far as 08, I always liked Lamar Alexander. But if McCain gets the
Republican nod I might just vote for him instead of a third party.

me and my new boyfriend (triple) are thinking of putting a web-cam in
our bed room. would anybody care to watch us having extra hot
mano-to-mano sex?

if enough want it we'll post the url here.

G'day Trev, from what I've seen on the net , they're going 2nd hand in the US for around 50 - 60 US Dollars, there's one on ebay too, in the US, link below, I personally don't know what they perform like, I have had other Realistic products and put it this way, you only get what you pay for, and sometimes not even that lol, I agree with DR RASTIS FAF00FNIK posting on the ICOM 706MKIIG except for the price difference, new from Andrews Communications is $1399.00 AUD, and they still go for around $1200 on ebay at end of bidding, bloody good radio though I've had mine for about 4 years now and very happy with it, choosing a radio depends on what your are using it for and how often, and ofcourse the bloody bank account always plays a big part in the decision lol , Cheers for now, Warren 43PC122

Cheers Warren, the IC706 is about $1000 dearer, that would take a lot or performance boost to match the price difference. I might pay a couple of hundred for the HTX100 as its a 30 watt unit by the looks.

1319. So far this month:

Newsgroup: rec.radio.cb
Date: 2005-01-20 12:15:12 UTC
From: Frank Gilliland <w&#65533;renut@NOSPAM&#65533;cehouse.net>
Message-ID: <cd4vu01cmk11etnpb56bgta8urj2e4lsu7@4ax.com>
Source record: 194960

Nearly three years after the invasion, US troops in Iraq finally have fully armored vehicles. Yet despite this long overdue protection, 37 more American troops have been killed and 127 more wounded so far this month. Since the war began, 1370 US troops have been killed and 10371 wounded; of those casualties, 1231 were killed and 9829 were wounded since Bush declared the war over on May 1, 2003.

In one of several one-on-one network news interviews conducted just prior to the inaugural celebrations, Bush stated that elections in Iraq will be a success because the Iraqi people "want to vote" even if their fears from escalating insurgent attacks keep many of them away from the polls.

The inaugural celebrations are scheduled to include 20 balls over a 4-day period at a cost of over 40 million dollars, which is 5 million more than Bush first offered in aid for the tsunami disaster. In addition to those expenses, "the Bush administration is refusing to reimburse the District [of Columbia] for most of the costs associated with next week's inauguration....forcing the city to divert $11.9 million from homeland security projects."

In Ohio, Secretary-of-State Blackwell, administrator of the election and co-chair of Ohio's Bush-Cheney campaign, publically backed away from a fundraising letter he sent to corporate Bush contributors, a practice which is illegal in Ohio. In the letter Blackwell pats himself on the back for delivering Ohio's electoral votes to Bush.

Have a nice day and enjoy the festivities!

I have a HTX-100 and like it. It's not without it's limitations, but then no rig is. I haven't seen any lately, but they seem to hold a value of about $100 to $125, in pretty good condition.

You should know that a stock HTX-100 is USB/CW only. Someone else mentioned the HTX-10. That version eliminated CW but added LSB and AM. There are mods on the internet to expand the frequency coverge, enhance the audio, change the sideband, etc.. Operationally, a lot depends on the band conditions. During the last good propogation cycle, I had my HTX-100 in my car and ran a small 3 foot mag mount on the trunk. From Phoenix I could hit the mid west and the east coast, every day. I removed it because it's too distracting. At home I run it from a homebrew power supply and feed my tribander, and it works great.

Probably the biggest complaint I have heard about it is the audio is a little lacking, but that's fixable.

I started on HF with an HTX-100 and had a ball. It was relatively cheap and a good place to start without breaking the bank. Since then, I have moved on to an all band 100 watter but still regard the HTX-100 as one that provided a lot of fun.

It is nice to have a new BMW but an old HQ still gets you there and a lot lower cost.

What size are you looking for? I do have a bunch that
aren't being used (Not much room for one in an Early
Bronco). I'd throw it down for cheap, no cost up front,
you make sure it's ok for you first, pay later.

Agreed. You would think in war time he would show a
little common sense. If we were actually winning in Iraq,
I could understand, but that is not the case.
Again, politics have replaced common military sense
in a conflict abroad.

>
> As far as 08, I always liked Lamar Alexander.

Not me, never liked him, not sure why, but just
don't trust him (Like I should really trust a politician)

> But if McCain gets the

The thing about McCain is that he's speaks his mind. In
politics that is not always a wise thing to do.

I'm going to wait and see who throw's their hat into
the arena.

Excellent piece, Frank. St. Pete Times ran another by Dante Zappala, detailing the death of his brother, Sgt. Sherwood Baker.

Our Soldiers are dying and we're to blame

>by Dante Zappala

Last week, the White House announced, with little fanfare, that the two-year search for weapons of mass destruction in Iraq had finally ended, and it acknowledged that no such weapons existed there at the time of the US invasion. For many, this may be a story of only passing interest. But for me and y ily, it resonates with profund depth.

My brother was Sgt. Sherwood Baker. He was was a member of the Pennsylvania National Guard deployed a year ago with his unit out of Wilkes-Barre. He said goodbye to his wife and his 9 year old son, boarded a bus and went to Fort Dix, Nj., to be hastily retrained. His seven years of Guard as a forward observer, was practicall worthless because he would not face combat. All he needed to do was learn how to not die. He received a crash course in convoy security running over cardboard cutouts of children. We bought him a GPS unit and Walkie-Talkie because he wasn't supplied with them.

In Iraq, he was assigned to the Iraq Survey Group searching for wmds. David Kay, who led the group until January 2004, already stated they did not exist. Hans Blix expressed serious doubts about their presence in pre-war inspections. A cadre of US generals and UN inspectors had been saying for years Iraq posed no threat to the US.

On April 26, 2004, the Iraq Survey Group, at the behest of the stubborn administration sitting safely in office buildings in Washington, was still on its fruitless but dangerous search. My brother stood atop his Humvee, securing the permiter in front of a suspect building in Baghdad. But as soldiers entered the building, it exploded. Sherwood was struck by debris in the back of his head and neck and was killed.

SInce that day, my family and I have lived with the grief of losing an loved one. We have strggled to explain his death to his son. We have gazed at the shards of life scattered at our feet, in wonder of its fragility, in perpetual catharsis with God. I have moved from frustration to disappointment to anger. And now I have arrived at a place not of understanding but of hope----blind hope that this will change.

The Iraq Survey Group's final report, which was filed in October but revealed only last week, confirmed what we knew all along. And as my mother cried in the kitchen, the nation barely blinked. I am left with a

single word seared into my consciousness: accountability. The chance to hold our adminstration's feet to that flame has passed. But what of our citizenry? We are the ones who truly failed. We shut down our ability to think critically, to listen, to converse and to act. We are to blame. Even with every prewar assumption having been proved false, today more than 130,000 US soldiers are trying to stay alive in a foreign desert with no clear mission at hand.

At home the sidelines are overcrowded with patriots. These Americans cower from the fight they insitigated in Iraq. In a time of war and record budget deficits, many are loathe to even pay their taxes. It is not their family members who are at risk, and they do not sit up at night pleading with fate to spare them.

Change is vital. We must remind ourselves that the war with Iraq was not a mistake but rather a flagrant abuse of power by our leaders---and a case of shameful negligence by the rest of us for letting it happen. The consequence is more than a quagmire. The consequence is the death of our national treasure--our soldiers.

We are all accountable. We all share the responsibility of what has been destroyed in our name. Let us begin to right the wrongs we have done to our country by accepting that responsibility.

1326. Re: FS Johnson Thunderbolt Linear Amplifier

For Sale a Johnson Thunderbolt linear amplifier. Has two 4-400A tubes
which will generate huge amounts of power from 3.5 to 30 mHz. with only
a few watts of drive on both AM and SSB throughout this range. In good
electrical and fair physical condition, not tested, but apparently
complete. Asking $800 + shipping for this unique and rare linear
amplifier. Please e-mail radiodon (at) comcast (dot) net for details and
pictures. Thanks!
-
I've heard that (type) linear on the air and it sounded great, but 800
bucks untested "as is" seems a bit steep for something that may or may
not work.

grouchiness but I've been drinking and
listening to pre-disco BeeGees through a
Sony amp. That being said.....)

_
Didn't the Bee Gees actually ROCK back in the late sixties and early
70s?

>Absolutely! Have you checked out some of

>their more recent work? Sometimes a little

>retro but with the same unique 'sound'.

No, but I will since you mentioned it. Last thing I heard concerning the
group was Maurice dying. I remember hearing some of their pre-disco
stuff back in the day, like on the King Biscuit Flower Hour on Sunday
nights and Don Kirschner's (sp?) Rock Concert on Saturday night. I
remember it because when the soundtrack came out for Saturday Night
Fever, I thought it was pure shit compared to what I originally heard
from the group. Then I found out they wrote the soundtrack tunes without
having any idea what the movie was about.

>What's the spread?

As of yesterday, it was 3.

>Tough call..

Some interesting things to note. Despite the way it may appear, the Steeler defense did not permit a single touchdown by the Jets and the Jets' scores all came on Steeler errors, the same manner in which the Steelers won the game. Each capitalized on the other team's mistakes, but the #1 defense in the NFL remains intact.

Your "side" indicates an intentional adversarial position. Everything
isn't right or wrong and this side or that side of an issue...seeing
everything as black and white is myopic. Stop looking for "sides" in
which to take and stand on your own feet....for once.

>I'm not the one displaying binary thinking.

Your "side" indicates an intentional adversarial position.

>Dave

>"Sandbagger"

Nevertheless, calling it "your" side indicates your predisposition to an
intentional adversarial position. This is not a desirable trait and
prevents you from displaying competent communicative technique.

The act of ignoring federal law is one of personal conviction. It's hard to justify the action without getting personal. Sorry if the reflection you are forced to see in the mirror displeases you.

Oh and you've stopped being a federal criminal? Wow! Break out the champaign and call Jerry Springer.....

>>I'm sure there will be none forthcoming.

>services your area.

My area? Now, be careful now, I'm about to ask one of those questions which you can't seem to understand the motivation for: Just what is your criteria for what determines "my area"? One mile radius? 10 mile? 30 mile?

I will tell you point blank that my cable system is NOT Comcast, and therefore they have no rights to offer cable modem service. Comcast cable modem service is only offered on Comcast cable systems.

>>YOU are a liar in the first degree.

Well, if you really want to get down to brass tacks, the only true "word" is that which comes from the FCC. Anything other than that is simply an exercise in speculation. But since we all seem to enjoy a certain degree of semantic posturing, I was offering up two sides of the variable power issue. One the one side, since the feature is not included on any CB radio other than the Galaxy, and also knowing how marketing people work, WRT hawking bells and whistles for "value added" profit, it stands to reason that this evidence stands as a testimony to the possibility that the feature is not legal.

One the other hand, since hand held radios often have hi/low power switches, that evidence can be offered as testimony that variable power is legal.

I made no "conviction" either way, I merely offered two opposing sides of an issue.

I would like to see the actual rule that specifies it.

I'm not interested in your beliefs.

>I can offer many logical points to back this up, but I'm guessing that
>you wouldn't believe them anyway.

I don't have to believe squat to recognize a valid argument. Por
enjemplo:

Premise #1: The moon is copper.
Premise #2: Copper is squishy.
Conclusion: The moon is squishy.

That argument is perfectly valid despite what I believe. The trick is
that if you want a factual conclusion you need factual premises. I
will admit that you have consistently presented valid arguments, but
you have been severely lacking in factual premises.

Now if you think you can finally offer up some verifiable facts then
go for it.

>> What a waste.

Nah, I shopped forever for a base and was completely sold on a Cobra 2000. I simply could not find one that was unadulterated for a price even close to the 2547. I also looked into used Cherokee CBS1000's but heard bad things about their reliability. I do have a "keyclown" radio in the truck, A Magnum 257. It is a wonderful radio and would have probably had bought one for the home if I would have known about it. The only reason I have not is that I like the 6 digit counter on the 2547 as opposed to the 5 digit on the 257, I would be happy with a counter with only the 6th digit for CB use. I also prefer the ease of use of the 2547, the 257's buttons are very mulit function. The radio sits on my bench and it's nice to reach up and twist a knob or punch a button knowing it only does one thing.

I bought the 257 for it's price and features, it sounds great on transmit and also because I'm learning code as we speak and want a "decent" entry level 10 meter rig. I do ABSOLUTELY NO freeband work, the 257 is clean and not overly powerful in that it will be immedately noticed as a 10 meter radio. Do buy an external speaker though! It was also one of the few affordable/convertable 10M rigs that was straight up with no echo, beeps, and other bullshit. It looks good too. Sideband performance is better than the Galaxy and AM is on par. The newer ones come with a speech processor and an electret mic, once agin the transmit audio is great! Up/down button placement on the mic is backwards! Down is to the right. Out of the box it was spot on calibration wise, we've had 0 degree weather here and it takes about 10-15 min to get it's shit together in the morning.

Down and dirty the 2547 is a hunderd bucks more than the 257. Although I do not overly advocate the use of "freeband radios" I would reccommend it over the 2547 if you do not need the 6th digit and ease of use. BTW the newer 257 can be locked down to only the 40 CB channels and power internaly dialed back to 4 watts so that the front panel control would be maxed out at 4 watts. Still ain't gonna do squat for you if you require an accepted radio.

The price of the DX2547 has declined in the past year but it is still expensive, I was quite hesitant to spend that money, but, it has been good. Although I do consider selling it from time to time to pocket some cash and grab another 257. When that ham ticket comes I have the feeling it will be time to upgrade :)

Was your 949 in a vehicle? I have noticed the drift but after a warmup
period it settles down. I would be hesitant to have one in a vehicle where
the temp is constantly rising and falling. My 2547 is in a heated section
behind my garage, the temp DOES vary and it DOES affect the radio, I just
don't shut it off and it seems OK. In the warmer months it does quite well

and gets shut off but I still would not trust it in a car. Many have reported reliability problems with galaxy's when subjected to lots of vibration and temp change. Another thing that was noted while shopping :)

Did you buy some bury-flex yet?

>It's an 'inductive' argument, Dave, and it's pretty strong.

But it also illustrates the fact that an "honorable discharge" is not
the be all and end all that it might seem.

The other fact remains that you can't malign Bush's records with all
sorts of maybe's and then have a fit when other's do it to Kerry.

>Yet you claim the same agency (the Pentagon) is responsible in a
>conspiricy to conceal records that are damaging to Kerry without any
>reason, subjective or objective, other than the fact that the records
>have not been released, and -despite- the fact that there is no law
>that requires him to do so, not even under the FIA.

I stated nothing of the sort. I stated that KERRY, by not filing a DOD
form 180 and releasing 100% of his records, is not being completely
open and honest about his service record. This leads to speculation as
to his reasons why he chose to not release those records. It casts a
shadow of doubt over his motives.

>You -still- don't see how stupid that sounds, do you?

The way you state it, it does sound stupid. But that is not how I
stated it.

>QST which covered the CB from day one; and most of them describe their
>widespread nature and general abuse of the band.

There were "noise toys", most of which were variations of a relaxation
oscillators, and commonly referred to as "birdies". But they were not
"Roger Beeps". The roger beep style ETS signal didn't become popular
until NASA pushed it to the radio forefront with their use of them
during their space missions.

I also find it curious that ham magazines like QST would cover such
things while magazines, like S9 and CB magazine, (Which I was a
subscriber to) which catered to strictly CB radio did not.

>But because -you- never heard a roger-beep that means they didn't
>exist. Once again you have declared something to be fact based on your
>opinions. Ok, Dave. Whatever you say.

I realize that this sounds like an example of Argumentum ad
Ignorantiam, but I wasn't living in a box Frank. I knew many people in
different radio circles. Like I said before, I never denied that some
small pockets of techie types may have made such a device, but it
never made the big time or, trust me, I would have known about it.

>>>>I will concede that the rule is open to a wide variety of

>going to claim that they don't exist because you never heard of them?

Yes, I found out what they referred to. It's a term coined by Condi
Rice as a lark, when they were choosing a nickname for their foreign
policy team. Most outsiders forgot or never knew the term unless one
read James Mann's book featuring that name. It certainly isn't a
universal term nor one that applies across the whole administration.
If I am guilty of ignorance, it's only to the extent that I don't read
every pundit author's interpretation of "the truth".

Most pundits refer to the Bush team as "neo conservatives", which is
also a joke, since the term "neo" meaning new, means that neo
conservatives are "new" conservatives. Which then begs the question;
what were they before? If not conservatives, then were they dare I say
it -- Liberals? Socialists? What then?

>>>>>So it should be obvious that if any radio with a "roger-beep" is

>>>rule. So would -you- have included it in a radio? I doubt it.
>>
>>None of this is valid today.
>
>
>Cop-out.

Not at all. I'm talking about right now in the present. There are
radios which carry a full load of "features" and others which carry
only a bare minimum. Some radios use the same PC board to cover
several models, the only difference being the external features they
charge the extra money for.

If a "roger beep" was clearly legal, it would stand to reason that it
would be included as another feature, and seen on at least the top
shelf models of the major radio makers.

THAT is an inductive argument as well.

>> Even if you despise the art of marketing
>>and capitalism,

>reasons. You sound like a third-rate psychologist.

You have still, to date, failed to deny that you are, in fact, a
liberal.

You have also made comments in the past that were less than
complimentary to the corporate business world. You were even somewhat
condescending when I remarked that my bonus would be a bit larger this
year than last, as if I somehow was not entitled to it, especially
after you lost your job. This all paints the picture of someone who is
fed up with "the system".

Maybe I'm wrong, but hey, I can only go on the tidbits that are
presented here.

>> the fact remains that bells and whistles sell

>>not expensive), yet it will add perceived value as another "feature"
>>to justify an increased price for.
>
>

>You of all people know that a manufacturing decision is based on a lot
>of factors.

That largest of all being the potential of increased profit.

>The question is if the additional sales could justify the
>extra cost, which would involve a market analysis.

Yes, that's exactly right. Judging from the sales of virtually identical foreign made radios, which include this feature, the cost adder should not be much (Exports already have it), and the sales of export radios would also seem to justify it. Also consider that there have been a few domestic radios made with a rather expensive (As compared to a roger beep) frequency counter built-in, for use on 40 PLL controlled channels, it makes one wonder......

> That analysis would
>also include a comparison with competitive products; i.e, aftermarket
>noise boxes, boards and mics. There is also the issue of whether or
>not the FCC would pitch a bitch even if the design changes would be
>technically legal but contrary to FCC policy, which would involve a
>hassle in the courts (and expensive attorney fees).

If the feature was legal, there would be no "fits". The fact that you acknowledge the potential for these "fits" tells me that you also acknowledge that the FCC rule on this issue is not so cut and dried. That's the whole point of this discussion. Thank you Frank.

>Then there is the
>product liability issue: What would be the legal expenses defending
>the company from pissed-off consumers who got an NAL when the FCC
>popped them for using the roger-beep function?

What? If the feature and its use were legal, this would not be a problem. Once again you are supporting my original premise that roger beeps are not legal. At the very best they are a "gray" area.

>Do you have those analyses, Dave? If you don't then you -don't- have
>the facts and are just speculating.

Yes, I am speculating. But judging from past performance, most manufacturers would gladly add a roger beep if they felt it was clearly legal. Hell, Galaxy did it. They had the balls to make the decision, they aren't afraid of the FCC, even if they might be wrong. They're willing to gamble that the FCC will not feel that this is an issue worth worrying about.

>>Besides, I never said that *all* radios should have it. But yo would

a simple acknowledgement?

I say it's a bad cap. What say you?

>reversed, etc. I've never had one blow up just out of spite.

I have. Usually they're in sweep tube CB amplifiers. For no other
reason than they just became "leaky", and start drawing current until
they heat up and explode. In my Lafayette Comstat 25 a resistor once
lit up like a candle due to a shorted cap in series with it.

The Uniden UPD-858 SSB boards (Realistic TRC-457/458, Cobra 138/139
XLR) had a pesky blue 10 uF tantalum cap that would short out and pull

the B+ feeding the driver and final stages to ground. I've seen that on at least 3 different radios. I'd call that a statistic.

>Also, I -am- one of those "pros who restore old radios", which has

But no lower either. They certainly fail more often than resistors.

>I do
>-not- recommend blanket replacement of aged capacitors -- on the
>contrary, I recommend -testing- aged capacitors. If they are still
>within tolerance and show no DC leakage, leave them ALONE!

I don't either as a rule. It's just a waste of money. But for you to discard, as idiotic, my suggestion of a small electrolytic cap changing value causing the problem in that Pierce Simpson radio is nothing but pure arrogance Frank. I have had a similar problem that was the fault of a cap.

>BTW, for anyone planning on testing caps, you don't need anything
>fancy. Just find an old R/C tester like the Eico 950. I have used an
>old tube-type Knight R/C tester for 20 years and it hasn't failed me

I have a digital capacitance tester. Not only can I tell if the cap is open or shorted, I can tell if it drifted appreciably from its original value.

>
>
>Your examples are proof of nothing except your lack of experience in
>the broad field of electronics and your inability to find the
>underlying cause of the failure.

The primary cause of the failure WAS the cap. When a cap in an audio chain opens up so that audio no longer passes through, and there are no voltages to speak of across it (Other than bias level), and when the cap is replaced, normal function is restored, that's a pretty good

indication of what the cause of the failure was.

>Cap failure as the -primary- cause of
>failure is no more common than a weak transistor, bad IC, blown
>diode/zener, or bad RF/IF can, or even poor manufacturing standards.

Ah! So at least now you admit that it is equally likely that a cap can fail as often as any particular active device. Very good, you're making progress.

Hold it right there. Being "open" and being "honest" are two different things. I am not "open" with my medical records but that doesn't necessarily imply (or as you say, "leads to spectulation") that I'm being dishonest about them. Fact: You don't know what is in those records. The only thing you have, by your own admission above, is your own speculation based on nothing more than suspicion. And your suspicion is fueled by..... what? Kerry's opposition to Bush?

That's a very, very lame argument, Dave.

>"Roger Beeps". The roger beep style ETS signal didn't become popular
>until NASA pushed it to the radio forefront with their use of them
>during their space missions.

Roger-beeps have been around almost as long as SSB because that's
where they were first widely used. The reason for that is because with
SSB it's difficult to tell when someone is finished with a
transmission. This necessitated the practice of using the words
"over", "out" and "roger". It wasn't long until someone got the bright
idea to make a circuit that would transmit a beep when the mic unkeyed
so they wouldn't sound like airline pilots in a Zucker Brothers movie.

>I also find it curious that ham magazines like QST would cover such
>things while magazines, like S9 and CB magazine, (Which I was a
>subscriber to) which catered to strictly CB radio did not.

Probably because S9 and CB magazine weren't around in 1959 when the CB
got started.

>>But because -you- never heard a roger-beep that means they didn't
>>exist. Once again you have declared something to be fact based on your

But I did. What part of "I am not a liberal" did you not understand? Oh, that's right..... you flatly rejected my statement in favor of your personal beliefs.

>You have also made comments in the past that were less than
>complimentary to the corporate business world.

I make comments that are "less than complimentary" to just about
everybody and everything. That makes me a liberal?

> You were even somewhat
>condescending when I remarked that my bonus would be a bit larger this
>year than last, as if I somehow was not entitled to it,

That's a faulty perception on your part. If you start reading between
the lines then you better be sure of what you are reading because
that's not what I wrote -or- implied. I have no idea what you do for a
living so I have no idea if your compensation is justified or not. And
if you pinned me as a liberal because you read more into my statement
than what I wrote then that's -your- fault, not mine.

> especially
>after you lost your job. This all paints the picture of someone who is
>fed up with "the system".

.....uh, sure Dave, that's why I have been on this newsgroup for years
preaching the virtues of using the system to effect changes in CB
rules instead of ignoring them. Or were you misreading between the
lines again?

>Maybe I'm wrong, but hey, I can only go on the tidbits that are
>presented here.

Over 5000 posts in THIS newsgroup -- you call that "tidbits"?

Yes, Dave, maybe you are wrong..... duh.

>>> the fact remains that bells and whistles sell
>>>products. A roger beep is not a difficult thing to add to a radio (and

>have been a few domestic radios made with a rather expensive (As
>compared to a roger beep) frequency counter built-in, for use on 40
>PLL controlled channels, it makes one wonder.....

Yes, it makes one wonder how you can draw hard conclusions from
nothing more than speculation.

>> That analysis would
>>also include a comparison with competitive products; i.e, aftermarket
>>noise boxes, boards and mics. There is also the issue of whether or
>>not the FCC would pitch a bitch even if the design changes would be
>>technically legal but contrary to FCC policy, which would involve a
>>hassle in the courts (and expensive attorney fees).
>
>If the feature was legal, there would be no "fits". The fact that you
>acknowledge the potential for these "fits" tells me that you also
>acknowledge that the FCC rule on this issue is not so cut and dried.
>That's the whole point of this discussion. Thank you Frank.

Nice try, but the FCC frequently encourages compliance with policies
when noncompliance is not necessarily or technically illegal. A recent
example being the voluntary television rating system, compliance to
which is "strongly encouraged" by the FCC.

And I never claimed the roger-beep issue was definitive. On the
contrary, it was -you- who claimed that roger-beeps were illegal
despite the existence of an FCC certified radio incorporating the
feature. It has been -my- position that its legality is in doubt; i.e,
"not so cut and dried". So while you are patting yourself on the back
you should realize that you have totally flip-flopped on the issue.

Hmmmm..... flip-flopped..... now where have I heard -that- before?

>>Then there is the
>>product liability issue: What would be the legal expenses defending
>>the company from pissed-off consumers who got an NAL when the FCC
>>popped them for using the roger-beep function?
>
>What? If the feature and its use were legal, this would not be a
>problem. Once again you are supporting my original premise that roger
>beeps are not legal. At the very best they are a "gray" area.

A certain car might be perfectly legal to manufacture and market, but
just because it can go faster than the speed limit doesn't mean
speeding is legal. It's not a "gray area" because it's the operator's
responsibility to know and abide by the laws -regardless- of the
capabilities of the equipment. The legal hassles begin when some
lawyer thinks he can make the case that it's legal to drive 90 because
the speedometer goes that high. Unfortunately, cases like that cost
lots of money not because they have merit, but because the companies
usually find it cheaper to pay off the lawyers instead of fighting it
out in court.

>>Do you have those analyses, Dave? If you don't then you -don't- have
>>the facts and are just speculating.
>
>Yes, I am speculating.

No kidding.

> But judging from past performance, most
>manufacturers would gladly add a roger beep if they felt it was
>clearly legal.

Wrong. A tone control is probably one of the cheapest and easiest features to add to a radio. Another cheap and easy feature that could have been included on AM radios is a BFO, which would allow the operator to communicate with someone having an SSB transceiver. By your reasoning, -most- radios would have included that feature. Yet few radios have tone controls; and as far as I know, only one AM CB radio ever included a BFO.

IOW, your reasoning is flawed.

> Hell, Galaxy did it. They had the balls to make the
>decision, they aren't afraid of the FCC, even if they might be wrong.
>They're willing to gamble that the FCC will not feel that this is an
>issue worth worrying about.

Speculation.

>>>Besides, I never said that *all* radios should have it. But yo would
>>>think at least the flagship radios from all the big name manufacturers
>>>would include this "feature" as another sale item.
>>
>>
>>You go ahead and email them with that question. Until you get a
>>definitive response your opinions are nothing more than speculation.
>
>If I had a contact on the inside, I would do that. But that's hardly a
>question to send to an (likely) out sourced customer service rep.

Geez, I only suggested it once and you are already making excuses.

<snip>

I don't believe that for a minute. I have worked on literally hundreds
of pieces tube gear of all shapes and sizes and -NEVER- had a cap blow
up for no reason, let alone overheating caused by leakage. But it's
not my experience that tells me your story is bullshit, it's the fact
that if the cap is leaking that much current in parallel with the
normal load then other components will fail first, such as the filter
resistor or choke, rectifier(s), transformer, etc. Usually it's the
fuse that goes first, and if there's no fuse then the transformer
overheats and shorts. Caps don't blow because of DC leakage. Caps -do-
blow when subjected to too much AC, and even a few volts of ripple can
be enough to pop a can on a tube rig. This happens when the load is
too heavy for the power supply, and the first cap to blow is the one
on the load side of the pi filter (which is a very good indication of
why it blew up). In the case of sweep-tube amps, I find that the most
likely cause of your capacitor mishap.

I would call that a design flaw. Tantalum caps have often been used in
applications where they were not a very good choice. They have certain
limitations, but many engineers haven't learned what those limitations
are, hence their reputation for failure. They are high-density caps
but are VERY sensitive to damage from overvoltage. A digital circuit
with a tightly regulated power supply is an appropriate application
for tantalum caps -- a CB is not.

I didn't discard your example as idiotic. I discarded your presumption
that a capacitor is responsible for the OP's problem. You once found a
radio that had a bad cap. Well, so have I, and so has just about
anyone that has fixed a few radios. But after you work with
electrionics for 30 years you eventually learn that you can't jump to
any conclusions. You have to locate the faulty component(s) AND you
must determine why it failed. A lot of caps do indeed go bad, but most
of the time it's a secondary fault. Finding the primary fault is what
seperates the professionals from the amateurs.

No it's not. After replacing the cap it would have been a good idea to
push the audio level rail-to-rail to see if the amp locks up, change
freqs to see if there's any resonance that could swing the AC above
the cap's rating, heat-run the radio for a few hours, and then -maybe-
you could safely conclude that the cap was the primary failure.

Of course the massive draw down of the military by that faggot clinton admin had nothing at all to do with any lack of readiness, ay?

Of course all the gutless, wimp ass, ignorant fucking around when we were hit over and over for the 8 clinton years by these camel asses did nothing to embolden the bastards, ay?

Of course the balless sissy ass clinton weeners that refused to provide close air support for the 75th Rangers in Somalia did nothing to encourage bin Laden, ay?

You described it perfectly.

>Did you buy some bury-flex yet?

No yet. I have to wait til spring. The ground is frozen. In the mean time, I will set up a 6 foot firetstik which is electrically 5/8 wave, and set up a ground plane using 9 foot wires. Just until it warms up.

Vinnie S.

As a radio they're great.

When 10m is open and there's people on that is.

At other times it'll only be good as a paperweight.

And given that sunspot numbers will be low for a few years, be prepared for
weeks at a time without contacts on 10m.

If you're on a budget, you'd be far better off with an older secondhand HF
set that covers the much more active bands of 80, 40 and 20m. At least
you'll be able to get contacts on HF just about any time you want rather
than tuning across a band that's dead most of the time.

Peter

That you are unable to grasp the moment your posts become personal, it is born of your emotion, is no surprise.

> They are pure and simple logic based on

>either facts or empirical observation.

>Something you seem unable to comprehend.

You still haven't managed to explain how one who violates the 70 MPH federal speed limit is not a "federal criminal", yet one who violates the dx rule, *is* a "federal criminal". Of special interest is your only criteria for referring to one as this "criminal" is the fact you hold the dx rule was enacted by the feds,,,,,,as was the 70 MPH limit.

>I do not have Comcast. I do not live on a

>Comcast system.

You're not being clear, Davie, a sure sign of confusion and difficulty communicating.

>That's WHY I have ptd.net. You won't find

>competing isp's on the same cable system.

Ah,,the desperate attempt to obfuscate. Too bad, comcast most certainly services your area.

>My area? Now, be careful now, I'm about to

>ask one of those questions which you can't

>seem to understand the motivation for: Just

>what is your criteria for what determines "my

>area"? One mile radius? 10 mile? 30 mile?

>I will tell you point blank that my cable system

>is NOT Comcast, and therefore they have no

>rights to offer cable modem service. Comcast

>cable modem service is only offered on

>Comcast cable systems.

>YOU are a liar in the first degree.

You have comcast in addition to whatever else.

>Prove it.

>Put up or crawl back under your rock.

Surely, but you will mind your etiquette. Proper communication dictates you answer the question posed you prior to earning the right to ask one of the inquirer. Name the ham you claimed agreed with you that roger beeps are illegal and I will illustrate with sound deftness your post from comcast.

Hey Doug, I talked to the guy at the International Boxing Club in Toledo.

He told me I can buy some ring time, right down the street from you.

The address is:

615 Front St
Toledo, OH 43605

That's real close to your house.

Let's settle this thing with the gloves on, and a ref.

What say?

At least you'll have a chance to throw the towel this way.

(save your gay remarks)

He's got so many sock puppet's, there's no keeping track. He's the asshole
that's posting those sick gay pictures here.

The simple fact remains, I'm gonna beat him to a pulp if he has the nerve to stand behind what he types.

Hey Doug, want it with or without the gloves?

See my ping N8WWM post, fugly chickenshit. I'll pay for the ring rental.

Or I can throw a much deserved street beating on your dead-beat ass.

Your call, motherfucker.

Hi Frank. I propose me renting the boxing ring time in Toledo, and Doug and I settling his -hooked on gay- in the squared circle. Like you, I really don't care, except the part where no one talks that way to my face without trouble. He only lives 3 exit's down the Ohio green-stamp from me.

I know the pat answer is to ignore him. Most times I do, but the urge to rub his deputy dogie jowls in my spit is hard to resist.

Figure a fair boxing match right down the street from his house, with me paying the rental is a fair way to settle it?

I value your opinion now, only reason I ask.

I just sent it to you. Trev's file was a 2.2M jpeg so I reduced it to
a 2-color gif of about 200K. Quality is no worse than the original,
which was pretty bad. I think he scanned a xerox copy.

Steveo's right. when you make gay references it makes Steveo feel unwelcome here. Just because Steveo is homosexual doesn't mean that he doesn't have as much right as you to post here.

Plus you bring up memories of Steveo's father leaving the home when Steveo was very young for another man.We don't need to remind him of this over and over again.

Nice. It's a good thing I only use hotmail for my Usenet addy. It works
if you take out the spam munge, and I've had it since hotmail started
handing them out. <me love it long time>

Wasn't there a time when forging my email addy -wuz- an AUP violation?

Hmmmm..... that might explain why my checkbook didn't balance this
month. But do you really think that all our dead and wounded troops,
and more dying each day, is nothing but "inane garbage"?

I'm not responsible for your state of ill health.

However, in the past couple months I have noticed something very
interesting: Say you find a strange piece of equipment and have no
idea what it does. So you start pushing buttons until something
happens. Well, I pushed a button marked "Dave Hall" and all of a
sudden I'm being treated like a keyclown by you and your other
sock-puppets, complete with forgeries and homo-dribble.

Do you have an explanation for this?

Source record: 195157

Not to mention, anyone with any sense doesn't meet with an enemy on their terms. This turdball has no idea what he has done, and he is about to learn how little he knows.

He is extremely frustrated because he cannot make the AKC stop busting auctions of keyclown gear and telling the world about keyclownism. The poor freak is to be pitied.

He dumps all this trash on people and can't understand that it matters not one iota. Those that matter know the deal, those that don't are of no concern.

dopeymopey's problem? Being a spoiled whiney baby all his life he thinks he can scream loud enough to make something change. He cannot.

When dopeymopey found out nobody cared what he said as far as it having any bearing on the outcome of the AKC's quests, he flew into a rage and made me his object of lust and hate.

Frankly, I am proud that a weird turdhunk like dopeymopey spends his time freaking out like this. As we have said all along, the AKC controls his actions totally. He daily proves it by being categorically unable to deal with the frustration in his life in a normal manner.

Probably, but these sites list the best and worst gas prices at
different stations within each city!

It's dogie and his gay obsession. Notice he was the only one posting
at 2 am. The same time the forges were occurring. What's really sick
is he signed up for newsfeeds in order to do that.

The company Landshark keeps is none of your business, either. It's
also none of my business. I simply cited the posts and never mentioned
it again.

> And if the company you keep makes you act like a jackass towards
>other then yes it is our business.

If I acted like a jackass towards you then THAT'S your business. But
the fact is that I generally ignore you. And I haven't changed my
position regarding illegal radio. So what are you whining about? My
outspoken opposition to Bush? My grouchy attitude? A technical issue
while you were posting under a different name? I can't address your
personal problems with me if all you do is fuss about who I talk with
on a newsgroup (and it's pretty sad if that gets your panties is such
a bunch). So what's your beef?

I see you found my email. Excuse my
grouchiness but I've been drinking and
listening to pre-disco BeeGees through a
Sony amp. That being said......

>Didn't the Bee Gees actually ROCK back in

>the late sixties and early 70s?

Absolutely! Have you checked out some of their more recent work?
Sometimes a little retro but with the same unique 'sound'.
-
(We're showing our age here, guys. I had Bee Gee 8-track tapes in my
portable E-150 fuck palace back in the day. (mirror-ball?))

Yea,,,you know the pathetic part? I still have a ton of 8 tracks in an
old footlocker..I have way more albums, but I still have a good
selection of 8 tracks. As of two years ago, my portable 8 track player
still worked. Last thing I listened to on 8 track was UFO "Light's Out".
Among my older tapes: Jefferson Airplane's "Bless it's Pointed Little
Head" and "Bathing at Baxters", Santana's "Abraxas", and a bootleg
Captain Beefheart.

Nah,,I believe you...I don't follow basketball anymore...haven't since Julius Irving and the sixers gave Philthy something to be proud of....During the years you mentioned, I was pretty isolated and my world was limited to two things,,,,school and kids.

>PIT is 7-7 ATS over the last 10 years (L10Y)

>in playoff games

Being the big, vegas gambler you are, you know what that record means...an incredible improvement over what they *historically* record. Whether you realize it or not, you are making
quite a case against what you profess. Keep posting those records over the years.

>I think I am doing quite a job of provin it past

>49 games they covered the spread 29 times.

>thats a 69% a sports gambler and even Jim

>Feist would love to have that as a winning

>percenatge

I guess our parting of the ways on this subject is what we each consider "historically" to constitute. Feist, perhaps,,Jimmy the Greek,,never. I admit, their record against the spread *has* improved over the years. So tell me,,,,,are you taking any line action with Pittsburgh giving 3?

1485. Powell Leaving FCC

Newsgroup: rec.radio.cb
Date: 2005-01-21 16:32:20 UTC
From: iamnotgeorge@webtv.net
Message-ID: <22871-41F12E94-487@storefull-3256.bay.webtv.net>
Source record: 195175

Hot off the Associated Press wire:

FCC Chairman Powell Said to Be Resigning
January 21, 2005 10:59 AM EST
WASHINGTON - Federal Communications Commission Chairman Michael K. Powell plans to step down from the job he's held for four years, two agency officials said Friday.

Powell, who maintained a light regulatory hand as the nation's chief media watchdog but collected some of the largest indecency fines against U.S. broadcasters, planned to issue a statement Friday but was not expected to hold a formal news conference, these officials said, speaking on condition of anonymity.

Powell, the son of departing Secretary of State Colin Powell, does not plan to step down immediately, the officials said. However, he will leave soon.

Powell privately informed some industry officials that he planned to make the announcement, according to one person who spoke with the chairman earlier this week. This person also spoke on condition of anonymity out of respect for the timing of Powell's announcement.

Powell, a champion of deregulation who critics say is too pro-big business, rose from commissioner to chairman when Bush took office in 2001. His term was to run until 2007.

While tackling complex issue ranging from telephone competition to rules for media ownership, Powell is perhaps best known for overseeing a dramatic crackdown on broadcast indecency that began before the infamous "wardrobe malfunction" during singer Janet Jackson's Super Bowl halftime performance last February.

The FCC received more than 1 million indecency complaints in 2004, most of them involving Jackson. CBS is contesting a proposed FCC fine of $550,000 for the incident.
Fines for indecent programming exceeded $7.7 million last year, a huge increase from the $48,000 imposed the year before Powell became chairman. Powell has praised the record fines, saying the commission was "wielding our sword" to protect children and viewers who object to racy programming.
"It's the most uncomfortable area you'd ever want to work in, enforcement," Powell said of indecency fines at a July 2004 symposium. "I'm a big believer in the First Amendment, but often I'm incredibly uneasy about lines we have to draw. No one takes pleasure in trying to decide whether this potty-mouth word or that potty-mouth word is a

violation of the law."

However, critics claimed Powell and the FCC are seeking to stifle free speech and intimidate broadcasters into following a more conservative agenda.
Powell succeeded in getting the Republican-dominated FCC to ease decades-old rules governing ownership of newspapers and television and radio stations.

The commission approved changes in 2003 that allow individual companies to own TV stations reaching nearly half the nation's viewers and combinations of newspapers and broadcast outlets in the same community.

Major media companies said the changes were needed because the old regulations hindered their ability to grow and compete in a market altered by cable television, satellite broadcasting and the Internet.

But lawmakers from both parties and a broad range of groups criticized the changes, saying the FCC regulations give large media companies too much control over what people see, hear and read.
Congress and the courts are considering several efforts to modify or repeal the rules.

...from the above

"When 99-412 goes into real restructuring in April, it
won't change some of those tenured old men of US
ham radio. They will be bitter, boastful, and express
contempt of newcomers, some of which will have the
exact same government-granted rank/status/privilege
as all those old men who claimed they "worked" for
theirs. Human nature doesn't change. Neither have
they."

Lenny my boy, all things 'ham radio' move like
maple syrup in Maine in February. This is as
much a constant of life issues as is Ohm's Law
and Income Taxes. I still hear hams on HF
outgassing about crap from 20 years ago as
if it happened yesterday. (This is known also as
the S.O.S.D.D. Principal - also common to other
"hobbies" like Model Trains, Golf, Equestrian
competitions and all-male Country Clubs)
What else can we say, it's human nature in all
of it's humorous facets. Always good for a
laugh. The Jerry Springer Show on the street
and in the waiting room.

Tell ja what.....save this post for 5 Years
and at that time, I'll bet you 6 dozen Dunkin Donuts
(and I'll buy!) that the same bunch of dirty old men are still
sending each other dirty nudie pics to each other
via Slo-Scan on HF and dumping a handfull of
pennies into the kitty at the club meeting then
taking 2 or 3 doughnuts and 2 refills of coffee.
(....assuming they put anything $$$ at all in the
kitty...the damm chain-smoking cheap bastards!)

xoxo
Pete the Wholesale Tea Man in Rochelle Park :)

NO WAIT! You don't understand at all! All the time I made threats was all bullCrap! I made threats because my love was not being returned!

Listen please.....just for this time,OK?

The sex with Frank was only for fun, thats all. You can ask Frank.We both just wanted to have some fun.....no love, just fucking. We both feel that way. Landshark and Twistie have their thing going.....they asked ME to join in. It was just fucking and nothing more.I will give them all up for you! Listen to me!! I LOVE YOU!!!!!!!!!!!

I promise this. if you would just return my love I will change!Doug, I know you're straight. But PLEASE LISTEN!!!!!

I LOVE YOU AND ONLY YOU!

I will change, I promise! I'll get my license. You and me can talk on 2 meters together. We'll laugh at twistie and the rest of them. I WILL STOP THE KEYCLOWN GAMES!

We can talk on the repeaters and simplex together.I even rat out auctions! I WILL DO ANYTHING TO BE WITH YOU!!!!!!!!!!!!!!!!!!!!

5745270212 Is a great find. Thank you.

Keep up the good work. My time is important to me and I appreciate
you listing all the worth while stuff on E-bay. Why plod through all
the normal stuff when you take your time to do this for us. It really
is a time saver when you go through the trouble of listing just the
important stuff. Thank you once again. You are a time saver.

Hey so far you are doing great, 5744938928, PHANTOM linear base
amplifier. Already ended with a winning bid...

Your a worthless P.O.S. Doug and so are your ratout lists..

Still posting gay shit to the radio groups, while forging me, Doug. You
really are scum.

Now answer the questions:

1. How is the court ordered shrink working out for you?

2. How's the court ordered job hunt going?

3. How's the court ordered wage withholding going?

4. Have you made the rain report for jamming repeaters again, Doug?

5. Have you threatened to kick anyone elses ass, only to have them show
up at your section 8 slum and prove what a fucking coward you are, maggot?

http://n8wwm.4t.com/

Go lay down by your bowl, dogie.

Wrong, butthead. I have not ever forged you on any NG anywhere.
However, you are just now starting to find out how it goes when you do,
fool. AKC aint finished with you yet, sunshine.

Having said that, thank you for all the laughs. It is so funny to watch
you spin wheels impotently.
PS My bowl is meerschaum, yours is petro toilet

1532. Magnet Mount Ground Question

Newsgroup: rec.radio.cb
Date: 2005-01-23 03:00:15 UTC
From: nathanp0515@aol.com
Message-ID: <1106449215.481366.147160@f14g2000cwb.googlegroups.com>
Source record: 195122

I bought a magnet mount cb antenna from radio shack. Put it up on my suburban. At about 40 miles per hour it blew down and almost fell of the car. I put velcrow in between the base and the roof of the car(i know, it's the only thing i could think of). Will this interfere with the ground? The bottom of the base didn't have any metal "contact" points or anything that i could have covered up plus the car is painted so how is it supposed to connect to the car to get a ground connection anyway? I can pick up signals pretty well.(i think, this is my first cb, can you tell)

Hi nathanp0515

I'm Steveo and it's my pleasure to serve you. I know alot about radios because i run a collins S line and it's all modified to transmit on the CB band. So thats shows I know a lot.

I was just wondering if you've ever been with a guy before(in the biblical sense)? I am VERY much willing and able to discuss that too!!thats actually the main focus of this group.....we're just a bunch of extra happy cb dudes!

Welcome to the group, Nathan.....just think of me as uncle steve,OK??

>cb, can you tell)

The mag mount depends on a decent capacitive coupling between
the mag base and the sheet metal of the car. If this coupling isn't
maintained then the antenna won't function properly and in your case
gets blown off the roof.

1545. I had a BALL at the bar today

Newsgroup: rec.radio.cb
Date: 2005-01-23 04:55:37 UTC
From: George Busch <WA3MOJ@aol.com>
Message-ID: <41f32e49$1@x-privat.org>
Source record: 195135

The stocky pal came too, and sat on the other side of me. We didn't waste time, the tall guy said 'hello' and kissed me on the mouth, the stocky guy pulled my nipple and tightened, not letting go. Hands everywhere, and the two guys worked me over, working my cock inside my pants, which is a good size and started to tent up - the tall guy guided my hand to the back of his jeans, and I realized that the flap was a hole and his ass was accessible, and was in fact all lubed up.

I stuck a finger or two inside him, while doing this the stocky guy undid my pants and released my cock. The ass was so moist, I soon realized that he must have had a load or two up there - this bar has a basement toilet that can get quite out of hand, even on a weekday afternoon.

Later, a good few drinks later, I cruised round the bar - and caught the eye
of the slight guy I had'nt tussled with yet. He motioned for me to follow
him to the downstairs loo. Now this is a notorious cruising spot and I have
seen some action here, but I was unprepared for the sight of my lanky guy
being fucked at the urinal. This had been going on for some time, and once
the guy fucking him had come, another guy next to him moved in and got
going - the skinheads customized jeans meant he could take all of this
without taking his trousers off, though when he turned I saw the front of
his pants awash with spunk stains, and I think he had been pissed on a
little.

His stocky friend was also getting some action, being sucked by a
black guy,when he came up for air I could see that the stocky guy had a
thick and massive cock. The slight guy guided my hand to his basket and
flipped his buttons open - not wasting any time I got onto my knees and soon
had a mouthful of hot meat - the two other guys noticed this and moved over
to me, and I found myself alternating three cocks at once, and getting a
good hard on myself in the process. I sensed the guys were on the edge and
gobbled away, and was rewarded by the stocky guy shooting a big load into my
face, open mouth and down my front - this set off the other two and their
loads mingled in - this was a lot of jizz, in fact it felt like I was being
pissed on, they soaked my mouth, chin, t-shirt and jeans - three distinct
flavours too. I've heard jizz is good for the complexion.....

You'll have to excuse the Village Idiot Frank...or whoever the dork is!
Those magnet mounts are notorious for
not having the strength to hold on at
speeds they are often rated for!
If you are serious and want to keep using
the radio in the vehicle, look to use a
mirror mount or a triple magnet-mount
or quad magnet for best results. Magnet
mounts can work good but a solid mount
is best, even if it is on a mirror. Good luck.

"Got RF?"

One of twithed's boyfriends, no doubt.

FCC levies $10,000 fine for unlicensed operation (Jan 19, 2005) -- The FCC has fined a Jacksonville, Florida, CBer $10,000 for transmitting without Commission authorization. The Commission released the Forfeiture Order (NOF) to Tommie Salter on December 27. The FCC says that in March 2004 its Tampa Field Office, responding to interference complaints, restricted Salter's hours of operation. The FCC lifted the quiet hours two months later, providing Salter "operated in full compliance with the Commission's rules." When interference complaints resumed, the FCC last July 15 again notified Salter it was restricting his hours of operation. The FCC NOF said a family member signed for the notice but that Salter told Commission officials he had not read it. As a result he transmitted while his operation was prohibited--between 6 AM and 11:59 PM. An August 2004 station inspection of Salter's CB station revealed that he was operating a non FCC-certificated transmitter, in violation of Part 95 rules. A Notice of Apparent Liability (NAL) proposing the $10,000 fine followed in October. The FCC's NOF upholds the fine, despite Salter's protests that his violation was not willful because he did not understand that use of non-certificated transmitters violated the rules and did not know about the reinstated quiet hours. Salter also claimed he couldn't pay the fine, but the FCC says he failed to provide tax returns or other necessary documentation to back up that claim. The FCC authorizes CB operation "by rule"--essentially a blanket license.--FCC

Put the base of the mag mount directly on the vehicle's sheet steel - or it
will blow off, particularly if whatever you put under it (like Velcro) is
thick.

>I can pick up signals pretty well.(i think, >this is my first cb, can you
tell)

You need to get a trucker-grade antenna - NOT a Radio Shack
mag-mount. It can be a mag mount - but it has to have a larger diameter magnet
(4"-5") for you to get out. It really makes a huge difference. So get over to
your local truck stop.

Sorry for the late reply, been busy and went skiing yesterday (went to bed
early, got up early).
Going to a sportsman show this morning with the wife & kids, If I get a
chance, I'll email you what I got available.

Smart politicain should be that way.
I wonder if he became Pres, would he shut down the borders more (being he's
from Az, he's aware of the
mass flow of illegals)?

Hi we are a gay couple, and the idea of you having a web cam on in your
bed room while having sex really turns us on.
May even have a go ourselves if it looks nice.

regards
2Marts

Those loaders are nice. We went from 6:30 am till around 2;30 in the
afternoon yesterday..took a break and then went from 11 last night till
5:30 this morning.

Felt like I was about 80 years old when I finally got out of the truck
this morning.

I haven't heard the grand total but it sounds like you got more than us.
The 30-40 mph wind gusts made for some nasty drifts.

It should make for an interesting football game today. Atlanta's not used to playing in that stuff. Did they get the field and seats cleared?

PL is the Motorola copyrighted name for CTCS is stands for Private
Line. CTCS, PL, ETS are all the same thing.

Good call. I ended up going to his house and watched both games over there.
Looks like the best PA team is in the SB.

I'll be putting my grand on the Pats tho. I won on both games, but the
mother-load came on the over for the Steeler game..35!?!? bwahahahaha

Nice win for your guys btw, I took them and gave 5.5. Rock on. :)

Yea, the guys that do the shopping center next door use those. They're
cement contractors in the summer, so the machine works year around. Those
do a nice job around parked cars. We have to be careful not to plow them
in when we plow isles with pickup trucks. I can out plow them on an open
parking lot or roadway tho. Ever use bobcat?

TONIGHT ON COAST TO COAST AM WITH ART BELL. . .

-HAARP- www.coasttocoastam.com

Guy Cramer
Dr. Joseph Resnick

Inventors Guy Cramer (superforce.com / hyperstealth.com)
and Dr. Joseph Resnick (NAT2DTC / NxGen BodyArmor)
will be sharing their expertise in the area of the HAARP.

The official purpose of Project HAARP which is based in
Alaska, is said to be for studying the ionosphere in order
to "understand and use it to enhance communications
and surveillance systems for both civilian and defense
purposes." Yet, over the years allegations have
arisen that HAARP is involved in everything from
weather modification to mind control.
Guy Cramer has a new article posted which concludes
that in addition to HAARP, there is another
huge ionospheric array in Alaska. The page also contains
photos, maps, and recommended links from Cramer
and Dr. Joseph Resnick.

hurrah
i love instruction videos
full audio i hope
and having the lights on is a good idea

more bets are you will be sucking up sweat on the couch.
bite the neck and slide in deep.
if you enjoy it

all you need is a california director to figure out the continuity.

well, when i lived in vancouver and i went to bed with the windows open.
Usually the neighbourhood went berzerk.
Some of us are slightly verbal.

good luck to your endevour

dug

hi steveo
i just read that entire posting
and believe me, you OWE me big time for that.

no idea the dougie nemisis

the greatest truth of life, is you are not gonna get out of here alive.

do you gotta be happy
nope
shitheads are everywhbere

will you scream when i throw you down on the hammock and move it back and
forth.
maybe

you happen to remind me of california buddies.

MY opinion.
What chit chat groups ya got.
white power and flame. HOW DISMAL

talk anytie you like
my email is real.

Don't know how i effect anyone.
cum once or cum over and over.

no reply required
i just see mountain view from your wiondow.

a very good night to ya

> the car.

The magnet is not strong enough. This is often the case when buying product that is considered enferior, as Radio Shack's usually are. If you have th ereceipt, take it bak and try and get your 30 bucks, or whatever you paid, and then buy a Wilson 1000. Much better magnet for only a few $'s more. In CB, as with almost any other hobby, you get what you paid for.

I put velcrow in between the base and the roof of the car(i
> know, it's the only thing i could think of). Will this interfere with
> the ground?

Only when the ground causes the antenna to fragment when it hits after falling off your vehicle. The velcro would be OK if you were sporting a much more powerful magnet.

The bottom of the base didn't have any metal "contact"
> points or anything that i could have covered up plus the car is
> painted so how is it supposed to connect to the car to get a ground
> connection anyway?

It grounds through magnetism. Like magic! ;-)

I can pick up signals pretty well.(i think, this
> is my first cb, can you tell)

Everybody starts off the same. You'll learn. Just as you'll learn who to read on this board and who to ignore. By the way, the person that responded to you using Frank's name is a forge. Like I said, you'll learn.

Welcome to the hobby.

Jeff

The only material you will be needing is bandages
after your next road trip.

Think about it - you lying on the ground
beaten up, a digital camera up your ass.

I remind you:

1. You are gay.

2. You are an illegal faggot keyclown.

3. You are powerless to stop the AKC.

Here's the deal with Doug. (OH BTW,welcome dug88)

Doug is Ok, the thing with him is that he's straight.Which is up to him, no judgement here. Steveo was the life of the meetings. For a while now Steveo has been totally in love with doug. he's forgotten about his friends. He had a three way thing going with frankie and twistie for a while. now steveo acts like they've never even existed.

not only that, steveo goes all over looking for Doug.....he even has a picture of him and he beats his meat looking at it all of the time.

if thats not bad enough, he posts all kind of wild stuff here.one day he begs doug to return his feelings, the very next day he makes threats aganist him. then he says he's sorry and spews on about how much he loves him.......crazy,crazy shit to say the least.

anyway, hope that helps some.

again, welCUM !!!!

Go to your favorite record shop a pick up a copy of the "Mentors" CD
and play the first song on the CD over and over again on the air.

Or get a 667v wired to about 10 deep cycle batterys and play the
soundtrack to a pork slaughter house at around 600 watts all day long,
or everytime you hear a fag key-up.

What do you want to know about him??

I had him one time at a petro.....he's about 5 1/2 inches, uncut. he's very oral but so am I. He shouted out on channel 19 and we meet up in a toilet stall at the petro.He slid inside my man-puss then when he pulled out I finished him off orally and I swollowed every drop.

So, like you chastised me for in another thread, because you've never
witnessed it, it never happened?

You must not have worked on as many tube circuits as you've claimed.
The law of averages and statistical probability would conclude that
you should have seen at least one exploding cap had you worked on
enough equipment.

>But it's
>not my experience that tells me your story is bullshit, it's the fact
>that if the cap is leaking that much current in parallel with the
>normal load then other components will fail first, such as the filter
>resistor or choke, rectifier(s), transformer, etc.

Leaky doesn't mean "dead short". A cap could have just enough
resistance to heat it up and cause it to out gas or explode, but not
cause other components to fail.

Also, if you recall how the HV power supplies were designed in a
typical sweep tube "CB" grade amplifier, the plate supply voltage was
usually designed at about 800V give or take. The filter caps were
usually (2) 40 uF, 450V caps wired in series across the DC output.
Sometimes there will be (2) 100K or 1M ohm resistors in parallel with
the filter caps as well. What happens is that one of the two caps
becomes leaky. It starts to draw current, and it raises the voltage
potential across the other cap, until it exceeds the voltage rating
and it's usually THAT cap which explodes.

> Usually it's the
>fuse that goes first, and if there's no fuse then the transformer
>overheats and shorts. Caps don't blow because of DC leakage. Caps -do-
>blow when subjected to too much AC, and even a few volts of ripple can
>be enough to pop a can on a tube rig.

It's the filter cap's job to smooth out ripple. Of course they will be subjected to it. If what you say were true, then there would be caps popping like popcorn. Ripple is not A.C., as the polarity never reverses. it only "pulses" to some degree. The charge-discharge action of the filter caps is what smooths these pulses out.

>This happens when the load is
>too heavy for the power supply, and the first cap to blow is the one
>on the load side of the pi filter (which is a very good indication of
>why it blew up). In the case of sweep-tube amps, I find that the most
>likely cause of your capacitor mishap.

I've never seen that happen for the reason's you've stated. An excessive load on the power supply will draw the DC voltage down far below the cap's rating. Since caps don't pass DC, that will not affect them.

>
>
>> In my Lafayette Comstat 25 a resistor once

I'm sure the engineers at Uniden had their reasons. The MTBF for those parts would seem to indicate that they were under rated for the job though.

>>>Also, I -am- one of those "pros who restore old radios", which has
>>>been both a hobby and a business since I restored my first Philco 20
>>>when I was a teenager. And after being in the electronics business

>>>professionally for 30+ years I can say, without any doubt whatsoever,

>
>
>Not when you realize that a light bulb is nothing more than a
>resistor

A light bulb is a resistor as a consequence of it's intended use. A
part designed as a resistor rarely fails, unless too much current is
drawn through it. In which case, the failure is quite obvious.

>>>I do

>electrionics for 30 years you eventually learn that you can't jump to
>any conclusions.

I didn't jump to any conclusions. I offered another possible cause for
the failure. I offered my experience with a VERY similar failure as a
reason to consider it.

Yet you told me to "shut my trap" as if I said something that was
totally incapable of happening. Something which you have now softened
to at least acknowledging that it can happen, even if you believe that
it's not likely.

>You have to locate the faulty component(s) AND you
>must determine why it failed. A lot of caps do indeed go bad, but most
>of the time it's a secondary fault. Finding the primary fault is what
>seperates the professionals from the amateurs.

But what you fail to consider, and my experience has shown me to be
true, is that caps, especially electrolytic and tantalum, can and do
fail for no other reason than age. They ARE the primary failure.

Caps will change value with age, even if they don't completely open or
short. Sometimes a change in value is all that it takes to make an
audio amp into an oscillator.

>>>>> They start having problems
>>>>>when they are pushed over their rated voltage or physically leak; and
>>>>>most electrolytics made since the 50's don't use liquid electrolyte.
>>>>
>>>> I'm telling you what I've personally experienced in close to 30 years

>>>
>>>
>>>Your examples are proof of nothing except your lack of experience in
>>>the broad field of electronics and your inability to find the
>>>underlying cause of the failure.
>>
>>The primary cause of the failure WAS the cap. When a cap in an audio
>>chain opens up so that audio no longer passes through, and there are
>>no voltages to speak of across it (Other than bias level), and when
>>the cap is replaced, normal function is restored, that's a pretty good
>>indication of what the cause of the failure was.

>No it's not. After replacing the cap it would have been a good idea to
>push the audio level rail-to-rail to see if the amp locks up, change
>freqs to see if there's any resonance that could swing the AC above
>the cap's rating, heat-run the radio for a few hours, and then -maybe-
>you could safely conclude that the cap was the primary failure.

That's normal procedure for any of my repairs. I always exercise the
radios for several days to make sure there are no hidden "gotcha's".

Sometimes I get a surprise and another intermittent component shows
its face. Usually though, what I replace is what went bad.

There is nothing more strenuous in the audio chain of a radio, than
the clipped and peaked operator yelling "auuuuuuuuudiooooo". If it
survives that, then I'd say the problem was fixed. It took 20 years
for the first cap to fail. I'm sure that radio hit the bone pile
before the cap opened up again.

>>>Cap failure as the -primary- cause of
>>>failure is no more common than a weak transistor, bad IC, blown
>>>diode/zener, or bad RF/IF can, or even poor manufacturing standards.
>>
>>Ah! So at least now you admit that it is equally likely that a cap can
>>fail as often as any particular active device. Very good, you're
>>making progress.
>

>
>I never denied it. I just didn't jump to the conclusion that it's a
>cap like you did.

You seem to have trouble differentiating between a conclusion and a
possibility.

And Florida couldn't be happier,,,the state is always content on playing a role in denying Philthadelphia fans anything,,even if it's just to host their loss to the Pats. On another plus side, is the Philthy fans coming to J-town,,,,,just like when the Panthers handed the Iggles their loss at home, there will be a huge market for the drunken Philthy idiots, er,,,fans, who buy those pre-printed bootleg T-Shirts "before" the game. Of course, I'll be in J-town, with a "Iggles" sweatshirt, taking advantage of the Philthy fan mentality. Of course, based on your past professional gambling expertise back in the day, you know what time it is in your heart and that it simply.....wasn't.....to....be.

Aren't you Douglas Adair the amateur operator N8WWM from Ohio who forges cb'ers on usenet? According to a google search, you were court ordered to undergo psychatric evaluation and counseling for child neglect and you were listed by the fcc as being recorded jamming the Toledo Amateur Radio Club's repeater on multiple occasion. When did twistedhed start using usenetzone to post with a screwed up time zone stamp next to his name? You really are suffering an identity crisis, your homosexuality not withstanding.

1646. Fried radio?

Newsgroup: rec.radio.cb
Date: 2005-01-24 21:47:32 UTC
From: Mark <NoSpam@all.thanks>
Message-ID: <1106603212.83672@ftpsrv1>
Source record: 195285
Cross-posted to: aus.radio.cb,rec.radio.cb

Hi,

I have a Uniden Grant running as a base station, with a Leson power desk mic connected.

I heard a station loud and clear just now, and I keyed the desk mike to reply. Probably only transmitted for about two seconds, long enough to say "Hello there, loud station".

But now the reception volume is incredibly low. Either on the internal speaker or with an external speaker connected. You need to turn the volume pretty much flat out and then can only just make out the audio.

I discovered that my young daughter had wound up the knob on the Leson desk mic to about three-quarters the way round. I usually have it on about one notch out of ten, something like that.

I suspect that I've fried something inside with such a large power setting on the desk mic. Is this feasible? Have I literally overloaded the transmitter by having the desk mic power so high? And why would that cause a problem with the receiver audio output?

Thanks for any ideas!

Mark.

Try re-keying the mic.. If you have dirty contacts in the mic, the
receive won't work on the radio...

Failing that, try a different mic.

Failing that, something is wrong with the radio.

>resistance to heat it up and cause it to out gas or explode, but not
>cause other components to fail.

Never seen it happen. It's easy to understand why it doesn't happen when you realize that heat requires power; i.e, watts.

Begin with the power supply. It is designed to supply a limited amount of power, usually a little more than for the intended use. Next, your cap leaks. This creates a shunt in parallel with the intended load, and therefore draws more power from the power supply. In fact, your leaky cap draws so much -additional- power that it evaporates the contents faster than the gasses can be vented by the vent hole -AND- builds up enough pressure to literally explode the metal case. I don't think so, Dave -- that's just too much power to not expect an earlier failure in the power supply.

And like I said before, if the supply isn't fused then the failure is probably going to be a shorted transformer or choke, blown rectifier, or some other device that is less robust than the capacitor. Often the caps themselves will fuse internally when subjected to too much current, which is something many techs fail to consider when replacing an open cap.

You might also realize that electrolytics blow up when subjected to a reverse current -not- because of any heat buildup or dissipation, but because the dielectric undergoes electrolysis and one of the products is a gas. This takes much less power than brute-force heating of a cap. If a low-voltage electrolytic blows up, the reason is almost always due to reverse current. High-voltage electrolytics don't blow up nearly as often because they are rarely subjected to reverse current.

>Also, if you recall how the HV power supplies were designed in a
>typical sweep tube "CB" grade amplifier, the plate supply voltage was
>usually designed at about 800V give or take. The filter caps were
>usually (2) 40 uF, 450V caps wired in series across the DC output.
>Sometimes there will be (2) 100K or 1M ohm resistors in parallel with
>the filter caps as well. What happens is that one of the two caps
>becomes leaky. It starts to draw current, and it raises the voltage
>potential across the other cap, until it exceeds the voltage rating
>and it's usually THAT cap which explodes.

You're reaching, Dave. If the voltage across the 'other' cap is exceeded what usually happens is the dielectric will puncture (at the dielectric's puncture voltage) and cause a brief short as the cap discharges. If the first discharge doesn't pop the fuse, or fuse the cap internally, it will continue to charge and discharge just like a relaxation oscillator, shunting (not dissipating) huge amounts of power until something else fails, which usually happens in less than a couple seconds. That's why you sometimes hear a short 'whine' before the radio goes dead and smoke billows from the transformer.

>> Usually it's the
>>fuse that goes first, and if there's no fuse then the transformer
>>overheats and shorts. Caps don't blow because of DC leakage. Caps -do-
>>blow when subjected to too much AC, and even a few volts of ripple can

>>be enough to pop a can on a tube rig.
>
>It's the filter cap's job to smooth out ripple. Of course they will be
>subjected to it. If what you say were true, then there would be caps
>popping like popcorn. Ripple is not A.C., as the polarity never
>reverses. it only "pulses" to some degree. The charge-discharge action
>of the filter caps is what smooths these pulses out.

Ripple is the AC component of a DC current. But call it whatever
tickles your fancy because the fact is that if a filter cap is doing
it's job of smoothing the ripple then it's not being subjected to very
much ripple! If there -is- much ripple then the cap isn't doing it's
job, the reason being either the cap is weak or the load is too big.
Whatever the cause, the cap sees that ripple as AC current which
causes heat dissipation in the cap due mostly to hysteresis (high
hysteresis being a characteristic of electrolytic caps).

Then capacitor go 'hiss'.

>>This happens when the load is
>>too heavy for the power supply, and the first cap to blow is the one
>>on the load side of the pi filter (which is a very good indication of
>>why it blew up). In the case of sweep-tube amps, I find that the most
>>likely cause of your capacitor mishap.
>
>I've never seen that happen for the reason's you've stated. An
>excessive load on the power supply will draw the DC voltage down far
>below the cap's rating. Since caps don't pass DC, that will not

You missed capacitor lab, didn't you? Excessive load will draw down
the DC voltage but -increase- the ripple.

A light bulb is most certainly designed as a resistor. If it didn't
have resistance it wouldn't work. A resistor necessarily dissipates
power, and in a light bulb that power is dissipated as light (and
heat). The only real question here is why household light bulbs fail
regularly while automotive light bulbs last for a much, much longer
time.

>the failure. I offered my experience with a VERY similar failure as a
>reason to consider it.

You said, "I'm assuming it's an old 23 channel classic. With old
radios like that, the problem is almost always related to caps drying
out," which demonstrated your ignorance about several things. First,
the radio is a more modern 40 channel PLL model, contemporary with the
TRC-453 and PC-122. Second, low voltage electrolytics don't "dry out"
because they use a solid dielectric. Third, you went on to describe
your one single experience from which you inferred, "the problem is
almost always....". Well Dave, suppose you once burnt yourself with a
soldering iron. Using your logic, the reason other people have burns
"is almost always" because they burn themselves with soldering irons.
It doesn't work.

>Yet you told me to "shut my trap" as if I said something that was
>totally incapable of happening. Something which you have now softened
>to at least acknowledging that it can happen, even if you believe that
>it's not likely.

Ok, how do I say this in a language you can maybe understand.....

You inferred from your single experience that the fault is most likely
a failed capacitor. Yet because I rejected your conclusion (or, if you
prefer, your 'declaration of high probability'), you assert that I am
claiming the fault is -not- a capacitor. That is a perfect example of
the logical fallacy 'Argumentum ad Ignorantiam' which, by definition,
is ignorance.

>>You have to locate the faulty component(s) AND you
>>must determine why it failed. A lot of caps do indeed go bad, but most

>
>But what you fail to consider, and my experience has shown me to be
>true, is that caps, especially electrolytic and tantalum, can and do
>fail for no other reason than age. They ARE the primary failure.

A bad cap CAN BE a primary failure. But more often they are only a
secondary failure. That is what MY experience has shown ME, and part
of that experience includes work in failure analysis at HP. So shall
we compare resumes, Dave?

>Caps will change value with age, even if they don't completely open or
>short. Sometimes a change in value is all that it takes to make an

>audio amp into an oscillator.

Just about everything changes value with age; especially crystals,
semiconductors, and paper/oil caps. All three are known to change more
significantly with age than any other type of component, including
electrolytic capacitors (but excluding disposable devices, of course).

I'm sure you have seen sockets for ICs, relays, crystals, and maybe
even transistors; but when was the last time you saw a socket for a
capacitor?

>
>There is nothing more strenuous in the audio chain of a radio, than
>the clipped and peaked operator yelling "auuuuuuuuudiooooo".

Maybe you should take a look at alignment procedures sometime. A
frequently used test involves driving the audio hard enough to slam it
rail-to-rail at every stage from mic to speaker, usually by feeding
the mic input with 500 mV or more; i.e, significantly more than you
can generate by screaming into the mic. One of the purposes of the
test is to see if any stages lock up, a problem that is much more
common with high-gain OP-amps produced since the 70's.

Resonance is also an issue that needs to be appreciated. As you noted
before, components change value over time. So a circuit that was not
resonant at the time of manufacture may be resonant 20 years later.
It's not a common cause of failure but I have seen it a few times. The
scary part is that a few volts feeding a series resonant circuit can
generate a hundred volts or more in the middle -- not a good thing for
the high-impedance and voltage-sensitive IC's and FET's produced these
days. As these components become more common and equipment is designed
with tighter voltage tolerances, I suspect resonance will become an
increasing problem in the future.

> If it

You seem to have trouble with the possibility that the fault could
just as easily be something other than what you learned from your one
and only experience with a similar problem.

<BITCH SNIP AGAIN FOR GPSqueen>

Well gpsqueen tell us some more! Lets see, you claim to be straight, but yet you seem to have plenty of gay friends to quote. Everybody knows the only people in rec.radio.cb is gay cb operators so you must have been trolling for attention. But thats OK big guy, you got it!!!!!We've seen how Rocky Roads bitch slaps you over and over again. We'll make you feel better. what you need is my GOOD BUTTY twistie to give you a nice, Slow Blow-job. Then just as he's getting you to the point of no return he'll stop. Then twistie will guide your man-meat into 'ole uncle steveo's man pussy.

How's that sound gps.....we all want you. we want to fuck a big hairy truck driving man like you big guy! now tell us about your cock big-boi!!!

Newsflash: I argue with Twisty to keep my own wits sharp. I argue with
you because you are ignorant.

>At least back before you guys found a common love for the wrong side
>of the political spectrum....

Your political spectrum analyzer is out of alignment, Dave. And you
haven't read a single word I've written because, and to put it simple
enough for a 1st grader, I don't take sides when it comes to politics.
I oppose Bush because he's a criminal, not because he's a Republican.
And if you had any evidence..... or even a reasonable suspicion that
Kerry was in any way a criminal, I could accept it. But so far you
have offered nothing but excuses, logical fallacies, and websites with
forged documents and paranoid rants. If you are really a supporter of
the Republican party then you should keep quiet on political issues
because you are giving your party some very poor representation.

Sideband,

You are spot on!

After I sent this message, I replaced the desk mic with the original Uniden mic and all was well. So I put the desk mic back on and same problem. Then I realised the mic transmit lock-down lever was part way down, turning off the receiver, but not quite turning on the transmitter!

Mark.

Traceroute tells you only what routers connections travel through between
you and a particular IP and serves no useful purpose in tracking abusive
sites. Traceroute's functionality is limited to testing connectivity.

Male seeking Male:

I'm looking for a nice guy to play radios with. Maybe have our own CB channel and make up secret codes with. WE could have our own club with for us only really cool club numbers. The coolest operators have the coolest numbers!

Then after we get tired of talking behind our friends back in our secret code on our own channel while using our super cool club numbers we can go to the park and go into a public toilet and suck and fuck the living shit out of each other.

Sounds Cool. HUH,

American Eagle 352

What makes you think that "they" are on the
wrong side of the political spectrum? Now think about
it Dave, Frank has said a number of times he is not a
liberal, he just doesn't like Bush's policy's. Twist is what
I would say a liberal, but how does that make him on the
"wrong side"? Because you don't agree with them, that
makes them on the wrong side?
I don't agree with Geo on much, but politically he's
seems to have the same views as I, but should I disagree
with that because I don't like him?

Landshark

U.S. Military May Face Reservist Shortage
By ROBERT BURNS, AP

WASHINGTON (Jan. 24) - The strain of fighting a longer, bloodier war in Iraq than U.S. commanders originally foresaw brings forth a question that most would have dismissed only a year ago: Is the military in danger of running out of reserve troops?

At first glance the answer would appear to be a clear no. There are nearly 1.2 million men and women on the reserve rolls, and only about 70,000 are now in Iraq to supplement the regulars.

But a deeper look inside the Army National Guard, Army Reserve and Marine Corps Reserve suggests a grimmer picture: At the current pace and size of American troop deployments to Iraq, the availability of suitable reserve combat troops could become a problem as early as next year.

The National Guard says it has about 86,000 citizen soldiers available for future deployments to Iraq, fewer than it has sent there over the past two years. And it has used up virtually all of its most readily deployable combat brigades.

In an indication of the concern about a thinning of its ranks, last month the National Guard tripled the re-enlistment bonuses offered to soldiers in Iraq who can fill critical skill shortages.

Similarly, the Army Reserve has about 37,500 deployable soldiers left - about 18 percent of its total troop strength.

The Marine Corps Reserve appears to be in a comparable position, because most of its 40,000 troops have been mobilized at least once already. Officials said they have no figures available on how many are available for future deployments to Iraq.

Both the Army and the Marines are soliciting reservists to volunteer for duty in Iraq.

"The reserves are pretty well shot" after the Pentagon makes the next troop rotation, starting this summer, said Robert Goldich, a defense analyst at the Congressional Research Service.

Among the evidence:

Of the National Guard's 15 best-trained, best-equipped and most ready-to-deploy combat brigades, all but one are either in Iraq now, have demobilized after returning from a one-year tour there or have been alerted for duty in 2005-2006.

The exception is the South Carolina National Guard's 218th Infantry Brigade, which has had not been deployed to Iraq as a full brigade because smaller groups of its soldiers have been mobilized periodically for homeland defense and numerous missions abroad, including Iraq.

The Army Reserve, with about 205,000 citizen soldiers on its rolls for support rather than combat duty, has been so heavily used since the Sept. 11, 2001 attacks that, for practical purposes, it has only about 37,500 troops available to perform the kinds of missions required in Iraq, according to an internal briefing chart entitled, "What's Left in the Army Reserve?"

The chief of the Army Reserve, Lt. Gen. James R. Helmly, recently advised other Army leaders that his citizen militia is in "grave danger" of being unable to meet all its operational responsibilities. He said the Reserve is "rapidly degenerating into a `broken' force."

The mix of troops in the U.S. force rotation now under way in Iraq is about 50 percent active duty and 50 percent reserves. But that is set to change to 70 percent active and 30 percent reserve for the rotation after that, beginning this summer, because combat-ready Guard units have been tapped out.

Thus, two active-duty Army divisions that have already served one-year tours in Iraq - the 101st Airborne and the 4th Infantry - have been selected to return in the coming rotation. The 1st Marine Expeditionary Force already is on its second tour in Iraq.

The potential squeeze could be avoided if security conditions in Iraq improve so dramatically this year that the Pentagon decides it can achieve stability with a smaller force.

The original expectation, after the fall of Baghdad in April 2003, was that a troop withdrawal could begin within weeks. But an unanticipated insurgency - which turned out to be lethal and resilient - changed the picture and led to the stressful situation the Army faces today.

In some respects, the use of Army and Marine reservists in Iraq has been a success story. Goldich, the defense analyst, said their performance has generally been excellent. Commanders sing their praise. Yet there is a limit to the reserves' resources, and the limit may be nearing.

It's not the absolute number of reservists that poses a problem. It's the number who have the right skills for what is required in Iraq and who have not already served lengthy tours on active duty since President Bush authorized the Pentagon three days after the Sept. 11 attacks to mobilize as many as 1 million reservists for up to 24 months.

A portion of the best-trained reservists are approaching the 24-month limit, and some senior officials inside the Army are considering whether the limit should be redefined so that mobilizations over the past three years would, in effect, not count against the 24-month limit.

The Guard and Reserve are hurting in other ways, too. Their casualties in Iraq have been mounting (16 deaths in October, 28 in November, 20 in December and at least 15 in the first 13 days of January), and the National Guard and Army Reserve have been missing their recruiting goals.

LOL - now THERE'S the sign of a weak mind. You couldn't think of anything better as a comeback? Sound's like something a prison bitch would say.

Naw, it's a capacitor for sure. I've seen symptoms like this once
before and it was a cap, so "the problem is almost always related to
caps drying out".

This place is an abomination! The akc argue that it is actually better here than when they were discussing amplifiers, antennas, key downs & even cb myths... I truly wonder ????
I myself would prefer a good cb myth or coax length argument over this consistant homo gay stuff or the I will beat your ass stuff. None of the participants will ever be man enough to quietly meet somewhere and take care of their problems. I for one would sure appreciate a stoppage of this ridiculous gay talk and get back to cb related stuff. THEORY OR MYTH, KEYDOWNS OR NOT, AMPLIFIERS OR NOT, MOBILE ANTENNAS OR BEAMS, whatever just keeping on topic would be a joy!

no idea where i am going here
Seems the jihad is intent on making
death, a good idea for them.
Suicide is doubtless the idea
muslims are teaching their children to be butchers

CBC. CA is the canadian government televison system
log onto it 7pm and 8pm programs.

pathetic

jus be carefull
even around kids
i gather the children mean nothing to these people

just got 25 pounds of onions.
So i shovelled many of them out, and taxed everyone in the high rise to find
me their favorite recipes.
talk ya later
time is close

Many nice clear pics.
All items are real inexpensive.
This is my entire list on Ebay.
You may want to check others while you're there :-)
Please add HTTP in front of the address below as AOL frowns on HOT links :-(
://cgi6.ebay.com/ws/eBayISAPI.dll?ViewListedItems&userid=myradioroom&sort=

>Newsflash: I argue with Twisty to keep my own wits sharp.

You admitted it yourself, Twisty "debates" by playing head games with
people. That's hardly your style Frank. Certainly not something worthy
enough to be called "sharpening your wits".

> I argue with you because you are ignorant.

Which started coincidentally when you found out that I support the
opposite political party. Before that we were on good terms. Now you
"think" (and I use the term loosely) that I'm an idiot for it. If that
isn't a partisan pundit attitude, I don't know what is.

Only an idiot argues with another idiot Frank. You "argue" with me,
because you are unable to present your "side" with anything other than
your own opinions. The fact that I can effectively deflect your
"facts" as the op-ed opinions that they truly are frustrates you.

The facts are not in your favor Frank.

>>At least back before you guys found a common love for the wrong side
>>of the political spectrum....
>
>
>Your political spectrum analyzer is out of alignment, Dave.

You certainly are entitled to your opinion, as wrong as it might
be.....

> And you
>haven't read a single word I've written because, and to put it simple

>enough for a 1st grader, I don't take sides when it comes to politics.
>I oppose Bush because he's a criminal, not because he's a Republican.

Where is the proof that Bush is a "criminal"? What is your basis for making such an outlandishly absurd and so typically partisan claim?

>And if you had any evidence..... or even a reasonable suspicion that
>Kerry was in any way a criminal, I could accept it.

The evidence is there. It came out of Kerry's own mouth. He admitted to taking part in the atrocities in Vietnam on Meet the Press on April 18th 1971. Now Frank, you are a man who claims to embrace logic, so riddle me this then. If Kerry is telling the truth about his part in these "atrocities", then is he not guilty of a war crime? On the other hand, if he didn't take part, and the whole issue was a blown up fabrication, doesn't that make him a liar? Would you want someone who lied like that to be your CNC? How many other lies did he make in the aftermath of the who winter soldier debacle and the VVAW movement which followed?

> But so far you
>have offered nothing but excuses, logical fallacies, and websites with
>forged documents and paranoid rants.

As opposed to the sites you provided which were nothing more than the flip side of what I provided?

You discard what I provided because you refuse to acknowledge the possibility. You don't want to believe it so you deny it. You came up with some sort of "font analysis" on one document, and concluded that it was a forgery, so then you projected that conclusion to all the rest of the evidence.

> If you are really a supporter of
>the Republican party then you should keep quiet on political issues
>because you are giving your party some very poor representation.

I am a conservative, and I support those who best represent my political views.

I also believe in the history and honor of our country, its military and the judgement of its leader in matters of national security and enemies of the state.

Yet he voted for Nader?(While also defending Kerry to the teeth)
Doesn't that sound a bit off to you? If a conservative or even a
moderate had a problem with Bush politically, do you think that they
would vote for Nader?

> Twist is what
>I would say a liberal, but how does that make him on the
>"wrong side"? Because you don't agree with them, that
>makes them on the wrong side?

No, not at all. But trust me, the liberal side of the political
equation has done little to help and far more to ruin this country at
practically every turn. From the creation of the welfare state, to
frivolous lawsuits, to the creation and expansion of federal taxes, to
affirmative action, to mollycoddling terrorists, liberals have been on
the wrong side of history, and the wrong side for Americans.
I could list a whole host of examples, but this is not the place for
that.

Liberals have all the best intentions. They are not "evil" people.
They are just hopelessly naive and overly idealistic. It's no wonder
that most Hollywierd types tend to be liberals. They did little to
truly earn their money. Their job is to play make believe, so it
should come as no surprise that they are so naive about world affairs
and human nature.

> I don't agree with Geo on much, but politically he's
>seems to have the same views as I, but should I disagree
>with that because I don't like him?

You should ask Frank that one, as he seems to have soured considerably in his opinion of me since he found out that I was one of those stuffy, old fashioned conservatives.

I try to keep things civil, and in fact, I try to keep politics out of the discussion. But ol' Frank can resist the temptation to fling a little barb at me in the middle of a totally unrelated subject. Because I disagree with him politically, he's now challenging my expertise in radio repair.

Not that it bothers me much. If this newsgroup ever prompted an emotional reaction from me, I'd just shut it off.

He admitted the same at the congressional hearing.

> Now Frank, you are a man who claims to embrace logic, so
>riddle me this then. If Kerry is telling the truth about his part in
>these "atrocities", then is he not guilty of a war crime?

Truth is relative to the observer. Facts are not. Kerry may have been
telling the truth as he saw it but the facts may be different (and
frequently are when testimony is based on nothing but recollection of
events). If the details from his testimony could be verified as
factual then he might indeed be a criminal. But there are two parts to
his testimony:

1) that war crimes were committed in Vietnam, which has since been
verified as factual. The problem is that everybody knew stuff like
that was going on so it wasn't any big shock when Kerry made the claim
in front of congress.

2) that -he- committed war crimes in Vietnam, which has -not- been
verified as factual. IOW, either he provided specific information

regarding his conduct which the government chose not to verify, or his claims were nonspecific generalities which could not be verified.

Assuming the former (that he made specific references to specific acts) then the question becomes one of why the crimes were not prosecuted. There were plenty of war crimes in Vietnam that -were- prosecuted, so war crimes were not always ignored. Nixon wanted him silenced, and it would have certainly been easy enough if he -was- prosecuted for war crimes, but that never happened.

So the only issue left is one of perception. What one person perceives as a crime may only be an act of war in the mind of another (a problem that is still evident today but you refuse to admit). That seems to be the case, and therefore it doesn't matter what he said. The -fact- is that Kerry's acts were never addressed by the government as war crimes -regardless- of how Kerry perceived his own actions.

> On the other
>hand, if he didn't take part, and the whole issue was a blown up
>fabrication, doesn't that make him a liar?

No. As I stated before, people have different perceptions and interpretations about what constitutes a "crime", and the subject has been addressed in this newsgroup on many occasions when discussing the legality of FCC rules.

> Would you want someone who
>lied like that to be your CNC? How many other lies did he make in the

Once again, I used the same standards that were used to discredit the CBS documents. And the rest of the website was nothing more than speculation without facts. Such as assumption of guilt in the absense of evidence, and misinterpretation of official military records.

>> If you are really a supporter of
>>the Republican party then you should keep quiet on political issues
>>because you are giving your party some very poor representation.

>because it was leaking.

1. Of course they don't blow up for no reason. The reason they blow is
due to several factors, including high resistance leakage.

2. I HAVE seen them blow due to leakage. You can come up with all
sorts of ripple theories and other such to explain the exact reason
why it goes, but the primary event which set the chain into motion was
the cap going leaky.

When you open up a tube rig or an amplifier and have to clean out
shards of aluminum foil and paper wadding, you don't really care about
the exact chain of events. You just know that the cap blew. When you
replace it (Once you determine that the rest of the supply is fine),
and the radio plays fine, it's a safe assumption that the cap was bad.

>>>But it's
>>>not my experience that tells me your story is bullshit, it's the fact

>>cause other components to fail.
>
>

>Never seen it happen. It's easy to understand why it doesn't happen
>when you realize that heat requires power; i.e, watts.

800V X .25 amps = 200 watts. More than enough to heat up a leaky cap.

>Begin with the power supply. It is designed to supply a limited amount
>of power, usually a little more than for the intended use.

And if the "intended use" is intermittent, (Like only when
transmitting) the supply is usually sitting there idle, supplying
little to no current.

>Next, your
>cap leaks. This creates a shunt in parallel with the intended load,
>and therefore draws more power from the power supply.

Not necessarily. If the supply is capably of supplying .5 amps at 800V
when operating, but a leaky cap only draws .2 amps while on standby,
that's more than enough to heat the cap without overtaxing the supply.

> In fact, your
>leaky cap draws so much -additional- power that it evaporates the
>contents faster than the gasses can be vented by the vent hole -AND-
>builds up enough pressure to literally explode the metal case.

That's exactly what happens.

> I don't
>think so, Dave -- that's just too much power to not expect an earlier
>failure in the power supply.

Not at all, considering the scenario I just presented. I can't count
the number of D&A Mavericks and Thunderbolt 305's and such that I've
replaced blown caps in, and not had any other fault.

>And like I said before, if the supply isn't fused then the failure is
>probably going to be a shorted transformer or choke, blown rectifier,
>or some other device that is less robust than the capacitor.

Sometimes, if the cap hangs on long enough and the resistance drops
further, the rectifiers blow too. But that's more rare.

> Often the
>caps themselves will fuse internally when subjected to too much
>current, which is something many techs fail to consider when replacing
>an open cap.

Yes, they do sometimes open up. The symptom of that is rather obvious,
when the receiver hums louder than the audio. Old caps dry out and
open up too. Not all of them leak and blow.

>You might also realize that electrolytics blow up when subjected to a
>reverse current -not- because of any heat buildup or dissipation, but
>because the dielectric undergoes electrolysis and one of the products
>is a gas.

Yes, I am fully aware of that. When I was a young pup on my first full time job, I worked 2nd shift and the techs sometimes got bored when their work was done, so we used to make "capacitor cannons". We'd solder a set of leads to a radial lead cap (Usually 10 uF at 50V) place it in a hunk of PVC pipe, hook it up to a power supply backwards, aim it at our "enemy" and crank up the voltage. It made quite a projectile. I used to play with the voltage sometimes and I would often crank it up slowly just to see where the point of avalanche current draw first started.

But I digress......

Answer me this, how does a functioning DC power supply reverse current under typical operating conditions?

> This takes much less power than brute-force heating of a
>cap. If a low-voltage electrolytic blows up, the reason is almost
>always due to reverse current. High-voltage electrolytics don't blow
>up nearly as often because they are rarely subjected to reverse
>current.

Which makes that an unlikely reason for cap failure.

>>Also, if you recall how the HV power supplies were designed in a
>>typical sweep tube "CB" grade amplifier, the plate supply voltage was
>>usually designed at about 800V give or take. The filter caps were
>>usually (2) 40 uF, 450V caps wired in series across the DC output.
>>Sometimes there will be (2) 100K or 1M ohm resistors in parallel with
>>the filter caps as well. What happens is that one of the two caps
>>becomes leaky. It starts to draw current, and it raises the voltage
>>potential across the other cap, until it exceeds the voltage rating
>>and it's usually THAT cap which explodes.
>
>
>You're reaching, Dave.

Not at all. This is what happened on at least 2 other amps that I worked on. One cap had exploded, and the other one was leaky (As measured with a simple VOM). I concluded, based on the evidence, that the leaky cap had caused the other cap to blow. The first time this happened to me, I replaced the "exploded" cap only, and when I fired up the amp, a short time later, the new cap exploded as well. Only then did I learn to check the remaining caps for leakage. Once the leaky caps were replaced, there was no further problem.

>If the voltage across the 'other' cap is
>exceeded what usually happens is the dielectric will puncture (at the
>dielectric's puncture voltage) and cause a brief short as the cap
>discharges. If the first discharge doesn't pop the fuse, or fuse the
>cap internally, it will continue to charge and discharge just like a

>couple seconds. That's why you sometimes hear a short 'whine' before

>the radio goes dead and smoke billows from the transformer.

That "whine" is usually from a 12V to HV multi vibrator which is
forced to stop from excessive current draw. I've seen that on a couple
of Lafayette HA-250's.

>>> Usually it's the
>>>fuse that goes first, and if there's no fuse then the transformer

>>of the filter caps is what smooths these pulses out.
>
>
>Ripple is the AC component of a DC current.

Not exactly true. It is the pulsating D.C. current component. There is
no A.C. after a bridge rectifier.

> But call it whatever
>tickles your fancy because the fact is that if a filter cap is doing
>it's job of smoothing the ripple then it's not being subjected to very
>much ripple!

Exactly my point. What you've described is a classic chicken and egg
scenario. The cap can't be subjected to too much ripple if it's doing
it's job. If there is ripple, then the cap is usually bad.

> If there -is- much ripple then the cap isn't doing it's
>job, the reason being either the cap is weak or the load is too big.

Right! But if the voltage is normal, then you can assume the current
draw is not excessive.

>Whatever the cause, the cap sees that ripple as AC current which
>causes heat dissipation in the cap due mostly to hysteresis (high
>hysteresis being a characteristic of electrolytic caps).

Now it's my turn. I've never seen a cap blow from a supply being
dragged down to the point of excessive ripple. Over voltage yes,
reverse voltage yes, leaky cap yes. Too much ripple, no.

>>>This happens when the load is
>>>too heavy for the power supply, and the first cap to blow is the one
>>>on the load side of the pi filter (which is a very good indication of
>>>why it blew up). In the case of sweep-tube amps, I find that the most
>>>likely cause of your capacitor mishap.
>>

>>I've never seen that happen for the reason's you've stated. An
>>excessive load on the power supply will draw the DC voltage down far
>>below the cap's rating. Since caps don't pass DC, that will not
>>affect them.
>
>
>You missed capacitor lab, didn't you? Excessive load will draw down
>the DC voltage but -increase- the ripple.

I've never seen a cap blow from ripple. Never.

>>>>The Uniden UPD-858 SSB boards (Realistic TRC-457/458, Cobra 138/139
>>>>XLR) had a pesky blue 10 uF tantalum cap that would short out and pull
>>>>the B+ feeding the driver and final stages to ground. I've seen that
>>>>on at least 3 different radios. I'd call that a statistic.
>>>
>>>
>>>I would call that a design flaw. Tantalum caps have often been used in
>>>applications where they were not a very good choice. They have certain
>>>limitations, but many engineers haven't learned what those limitations
>>>are, hence their reputation for failure. They are high-density caps
>>>but are VERY sensitive to damage from overvoltage. A digital circuit
>>>with a tightly regulated power supply is an appropriate application
>>>for tantalum caps -- a CB is not.
>>
>>I'm sure the engineers at Uniden had their reasons.
>
>
>Blind faith.

Cost cutting.

>>>>But no lower either. They certainly fail more often than resistors.
>>>
>>>
>>>Not when you realize that a light bulb is nothing more than a
>>>resistor
>>
>>A light bulb is a resistor as a consequence of it's intended use. A
>>part designed as a resistor rarely fails, unless too much current is
>>drawn through it. In which case, the failure is quite obvious.
>
>
>A light bulb is most certainly designed as a resistor. If it didn't
>have resistance it wouldn't work.

Yes resistance is necessary for it's function. But it's not the
function of a light bulb to act as a resistor in a circuit. Light
bulbs are far too fragile for that use.

> A resistor necessarily dissipates
>power, and in a light bulb that power is dissipated as light (and

>heat). The only real question here is why household light bulbs fail
>regularly while automotive light bulbs last for a much, much longer
>time.

Higher voltage, and a smaller ,thinner and more shock prone filament.

>>>I didn't discard your example as idiotic. I discarded your presumption
>>>that a capacitor is responsible for the OP's problem. You once found a
>>>radio that had a bad cap. Well, so have I, and so has just about
>>>anyone that has fixed a few radios. But after you work with
>>>electrionics for 30 years you eventually learn that you can't jump to
>>>any conclusions.
>>
>>I didn't jump to any conclusions. I offered another possible cause for
>>the failure. I offered my experience with a VERY similar failure as a
>>reason to consider it.
>
>
>You said, "I'm assuming it's an old 23 channel classic.

Yes, I was more or less asking for confirmation.

> With old
>radios like that, the problem is almost always related to caps drying
>out," which demonstrated your ignorance about several things. First,
>the radio is a more modern 40 channel PLL model, contemporary with the
>TRC-453 and PC-122.

Ok, you could have just said that in the beginning.

> Second, low voltage electrolytics don't "dry out"
>because they use a solid dielectric.

That may be true, but they do change value and open up due to the
affects of humidity and age. What the process is that causes that to
happen, I'm not sure of the exact name. But "drying out" is a common
term that we use to describe it. If I am technically in error, then so
be it.

> Third, you went on to describe
>your one single experience from which you inferred, "the problem is
>almost always....". Well Dave, suppose you once burnt yourself with a
>soldering iron. Using your logic, the reason other people have burns
>"is almost always" because they burn themselves with soldering irons.
>It doesn't work.

Ok, I'll admit that using the term "almost always" was a bit strong.
But you erred when you made the claim that it was a "single"
experience. I have had a few experiences with older radios where this
has happened. I also had an old SBE were a noisy receiver was traced
to a germanium transistor going bad. There is no hard fast rules, and
troubleshooting a radio over the internet is an exercise in throwing
darts.

All I wanted to do was to provide other alternatives, based on my
extensive experience in this business. The bottom line is to help
other people who have problems. It's not supposed to be a chest
pounding competition on who's had the most experience.

>>Yet you told me to "shut my trap" as if I said something that was
>>totally incapable of happening. Something which you have now softened
>>to at least acknowledging that it can happen, even if you believe that
>>it's not likely.
>
>
>Ok, how do I say this in a language you can maybe understand.....
>
>You inferred from your single experience that the fault is most likely
>a failed capacitor.

Not single. And the symptoms were VERY similar.

>Yet because I rejected your conclusion (or, if you
>prefer, your 'declaration of high probability'), you assert that I am
>claiming the fault is -not- a capacitor. That is a perfect example of
>the logical fallacy 'Argumentum ad Ignorantiam' which, by definition,
>is ignorance.

Not at all. If I claim that there is a high probability of component
"A" failing and you disagree. Then you are saying, in essence, that
there is a very low probability that component "A" is the failure.

If you consider component "A" to have a low probability of failure it
stands to reason that you place a higher probability on another
component failing.

Inductive reasoning.

>>>You have to locate the faulty component(s) AND you
>>>must determine why it failed. A lot of caps do indeed go bad, but most
>>>of the time it's a secondary fault. Finding the primary fault is what
>>>seperates the professionals from the amateurs.
>>
>>But what you fail to consider, and my experience has shown me to be
>>true, is that caps, especially electrolytic and tantalum, can and do
>>fail for no other reason than age. They ARE the primary failure.
>
>
>A bad cap CAN BE a primary failure. But more often they are only a
>secondary failure. That is what MY experience has shown ME, and part
>of that experience includes work in failure analysis at HP. So shall
>we compare resumes, Dave?

More chest thumping? What you've done at HP has no bearing on what
I've seen in 30+ years of CB radio repair.

>>Caps will change value with age, even if they don't completely open or
>>short. Sometimes a change in value is all that it takes to make an

>>audio amp into an oscillator.

>>
>>>No it's not. After replacing the cap it would have been a good idea to
>>>push the audio level rail-to-rail to see if the amp locks up, change
>>>freqs to see if there's any resonance that could swing the AC above
>>>the cap's rating, heat-run the radio for a few hours, and then -maybe-
>>>you could safely conclude that the cap was the primary failure.
>>
>>That's normal procedure for any of my repairs. I always exercise the
>>radios for several days to make sure there are no hidden "gotcha's".
>>Sometimes I get a surprise and another intermittent component shows
>>its face. Usually though, what I replace is what went bad.
>>
>>There is nothing more strenuous in the audio chain of a radio, than
>>the clipped and peaked operator yelling "auuuuuuuuudiooooo".

>Maybe you should take a look at alignment procedures sometime. A
>frequently used test involves driving the audio hard enough to slam it
>rail-to-rail at every stage from mic to speaker, usually by feeding
>the mic input with 500 mV or more; i.e, significantly more than you
>can generate by screaming into the mic.

While I can understand why you might want to do that, I've never seen
it in any of the factory alignment procedures or in the SAM's
photofacts.

Often the only reason given in the procedures to increase the audio
input (And I have a nice Tektronix generator) is to verify proper
operation of the modulation limiter.

> One of the purposes of the
>test is to see if any stages lock up, a problem that is much more
>common with high-gain OP-amps produced since the 70's.

Most CB radios made in the 1960- 1980 time frame do not use Op-amps.
Some Uniden radios used them more recently, but not as audio amps.
They were used as AGC amps and T/R switching.

I have never seen an audio stage on a CB radio "lock up". The Hy-Gain
623 used to have an interestingly annoying "design flaw" where if the
modulator was driven too hard, it would shut down for a few seconds.
You would loose receive audio until it recovered.

>Resonance is also an issue that needs to be appreciated. As you noted
>before, components change value over time. So a circuit that was not
>resonant at the time of manufacture may be resonant 20 years later.
>It's not a common cause of failure but I have seen it a few times.

You should see what happens when a 7812 regulator goes into
oscillation due to bad/missing bypass caps.

> The
>scary part is that a few volts feeding a series resonant circuit can
>generate a hundred volts or more in the middle -- not a good thing for
>the high-impedance and voltage-sensitive IC's and FET's produced these
>days. As these components become more common and equipment is designed
>with tighter voltage tolerances, I suspect resonance will become an
>increasing problem in the future.

By then CB (and probably ham) radio will be a memory. Maybe not. It
would seem that many CB radio designs have not changed all that much
from 1980. While the rest of the industry has embraced surface mount
technology and LSI chips, CB radio is still using leaded components
and discrete parts. From a repair standpoint, this is a good thing.
But I'm sure the radios could be made much cheaper (and smaller) if
they went with newer technologies.

>>>>Ah! So at least now you admit that it is equally likely that a cap can
>>>>fail as often as any particular active device. Very good, you're
>>>>making progress.
>>>
>>>
>>>I never denied it. I just didn't jump to the conclusion that it's a
>>>cap like you did.
>>
>>You seem to have trouble differentiating between a conclusion and a
>>possibility.
>
>
>You seem to have trouble with the possibility that the fault could
>just as easily be something other than what you learned from your one
>and only experience with a similar problem.

Once again, it was not "one and only". And I never said that a cap
was THE only possible failure. I offered it as a suggested course of
action. Something you jumped on me for in a very unprofessional and
crass manner.

Quotes from the King of Detective Fiction, Raymond Chandler. Enjoy!

Ability is what you're capable of doing. Motivation determines what you do. Attitude determines how well you do it.

Alcohol is like love. The first kiss is magic, the second is intimate, the third is routine. After that you take the girl's clothes off.

Chess is as elaborate a waste of human intelligence as you can find outside an advertising agency.

I knew one thing: as soon as anyone said you didn't need a gun, you'd better take one along that worked.

I think a man ought to get drunk at least twice a year just on principle, so he won't let himself get snotty about it.

It is pretty obvious that the debasement of the human mind caused by a constant flow of fraudulent advertising is no trivial thing. There is more than one way to conquer a country.

It is not a fragrant world.

It was a blonde. A blonde to make a bishop kick a hole in a stained glass window.

She gave me a smile I could feel in my hip pocket.

The streets were dark with something more than night.

Woe, woe, woe... in a little while we shall all be dead. Therefore let us behave as though we were dead already.

He looked about as inconspicuous as a tarantula on a slice of angel food.

However top lofty and idealistic a man may be, he can always rationalize his right to earn money.

The moment a man begins to talk about technique that's proof that he is fresh out of ideas.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner.
I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

Well, I'm glad it wasn't dirty contacts. I wasn't aware your mic had a
lock lever, or I would have suggested checking that, as well!

Electrical tape on the lock lever to keep it "unlocked" might be
advisable. Glad you got it figured out.

Fuck yourself up the ass!

(1) I never said I had the radio; (2) Even if I had it, the questions
apply to ten meters as well as CB; (3) Even if I had the radio and was
using it on ten and 11 meters, it would be legal outside the USA; (4)
Even if I had the radio and modified it for 11 meters, no law would be
broken until I propagated a signal on 11 meters; (5) Even if I
modified the radio and propagated a signal on 11 meters, no law would
be broken if it were an emergency.

Anyway, the company seems to suck and provides no helpful technical
information -- probably because its customers are like you and are
only interested in putting the radio up their ass.

Maybe that's happened to you but never on my bench, not unless the cap
was too small for the load. Like I said before, I have never seen a
cap that blew up on it's own accord, leaky or not (and I don't know
how you can determine it was leakage that caused your cap to blow
unless you have a time machine in your shop).

>>>>But it's

>800V X .25 amps = 200 watts. More than enough to heat up a leaky cap.

Heat it? Yes. Will it pass that much current without fusing
internally? Doubtful. If it -could- pass that much current would that
be enough power to make it explode? Hardly, since a lot of that power
is shunted to ground and not dissipated in the cap. It will just vent
until it's empty or shorted.

>>Begin with the power supply. It is designed to supply a limited amount
>>of power, usually a little more than for the intended use.

>
>Answer me this, how does a functioning DC power supply reverse current
>under typical operating conditions?

If the cap is subjected to reverse current then the operating
conditions are not typical, are they? But if you're asking how a low

voltage cap can be subjected to reverse current then there are a
myriad of possibilities, the most obvious and most common is that the
power supply was connected backwards. Also, electrolytics are not
always fixed at ground potential, such as when they are used as a DC
block in an audio line. If the offset fails, the cap pops. There are
also instances where an abnormal AC component swings the normally
positive side of the cap negative. The cap voltage can get reversed by
rectification when a pull-up resistor fails. Etc, etc. Geez, Dave,
you've been doing this for 30 years and you didn't know this stuff?

>> This takes much less power than brute-force heating of a
>>cap. If a low-voltage electrolytic blows up, the reason is almost
>>always due to reverse current. High-voltage electrolytics don't blow
>>up nearly as often because they are rarely subjected to reverse
>>current.
>
>Which makes that an unlikely reason for cap failure.

It means high-voltage electrolytics are less likely to fail than
low-voltage electrolytics. Nothing more.

>>>Also, if you recall how the HV power supplies were designed in a
>>>typical sweep tube "CB" grade amplifier, the plate supply voltage was

>
>That "whine" is usually from a 12V to HV multi vibrator which is
>forced to stop from excessive current draw. I've seen that on a couple
>of Lafayette HA-250's.

I have heard that "whine" from equipment that had no vibrator,
mechanical -or- solid-state. It comes from the cap. If you don't
believe me, do the following experiment: Take a good cap, put it in
series with a resistor of, say, 100 to 1k ohms, then slowly push the
voltage up above the rated voltage. I would suggest using a cap of
only 100-150 volts because some of them won't puncture until they get
up around 400-500 volts. Anyway, at some point you hear the capacitor
begin to whine, and if the whine doesn't stop right away the resistor
will commence smoking (unless your power supply blows first). Try it.
It's fun!

>scenario.

The rooster came first.

> The cap can't be subjected to too much ripple if it's doing
>it's job. If there is ripple, then the cap is usually bad.

Not necessarily. A heavy load will increase the ripple.

>> If there -is- much ripple then the cap isn't doing it's
>>job, the reason being either the cap is weak or the load is too big.
>
>Right! But if the voltage is normal, then you can assume the current
>draw is not excessive.

Again, not necessarily. The DC component may stay within norms but the
AC component (ripple) will increase under load. That's just a fact of
life. Haven't you ever studied the basics of power supplies?

>>Whatever the cause, the cap sees that ripple as AC current which
>>causes heat dissipation in the cap due mostly to hysteresis (high
>>hysteresis being a characteristic of electrolytic caps).
>
>Now it's my turn. I've never seen a cap blow from a supply being
>dragged down to the point of excessive ripple. Over voltage yes,
>reverse voltage yes, leaky cap yes. Too much ripple, no.

Yet you claim that you can definitively determine if a completely
destroyed capacitor blew up because it was leaking. So how do you do
that? Do you reconstruct the capacitor like the FAA reconstructs
planes? Because that's what -they- need to do in order to determine
the cause of failure when there's no other obvious cause. Maybe they
should just hire you and your crystal ball, huh?

>>>>This happens when the load is

>
>I've never seen a cap blow from ripple. Never.

You probably have but didn't know it. You can create and measure a
controlled failure with a couple good chokes for AC isolation, a
couple large motor-run capacitors for DC isolation, and an audio amp
to supply the AC. If you need a schematic just let me know.

>bulbs are far too fragile for that use.

Wanna bet? I use them all the time for dummy loads while messing with
my generator experiments. They also make great regulators because of
their non-linear characteristics. And for the same reason, miniature
light bulbs make pretty decent audio compressors. So you still say
that light bulbs aren't resistors? Hogwash. If it's useful as a
resistor then it's a resistor.

>> A resistor necessarily dissipates

>>time.
>

>Higher voltage, and a smaller ,thinner and more shock prone filament.

Tungsten, one of the strongest metals on the periodic chart, is "shock prone"? And what difference does the voltage make? It's the current that causes the filament to heat up. Which is true regardless of it's thickness, too.

Anyway, it was a rhetorical question.

Or you could have simply looked it up through google like I did.

>> Second, low voltage electrolytics don't "dry out"
>>because they use a solid dielectric.
>
>That may be true, but they do change value and open up due to the
>affects of humidity and age.

Age, yes, they do change to a greater or lesser degree. Usually lesser. Humidity? I don't think so, Dave. Not when they are hermetically sealed. And the only caps that aren't hermetically sealed are air caps. Have you ever seen an "air electrolytic"? I haven't.

> What the process is that causes that to
>happen, I'm not sure of the exact name. But "drying out" is a common

If you truly wanted to provide other alternatives then you probably
shouldn't have limited your "alternative" to the exclusion of any
others. Trouble-shooting by remote control may be difficult but it's
far from "throwing darts". You just have to refrain from jumping to
conclusions.

>>>Yet you told me to "shut my trap" as if I said something that was

>
>Not at all. If I claim that there is a high probability of component
>"A" failing and you disagree. Then you are saying, in essence, that
>there is a very low probability that component "A" is the failure.

Wrong. Disagreement is -not- an assertion of the opposite. This is the
same fallacy you invoke in your political arguments: You label me as a
liberal because I do not agree with your admitted conservatism, which
is also wrong. For example, if you believe in God and I state that I'm
an athiest, that doesn't mean I hold satanic rituals in my basement
(or anywhere else).

If you want to assert yourself as a person who can think logically
then you need to understand logical fallacies enough not to make them.

>If you consider component "A" to have a low probability of failure it
>stands to reason that you place a higher probability on another
>component failing.

Again wrong, and for the same reason.

>Inductive reasoning.

Before you make any more logical leaps, let me send you a good book on
the subject. I'll pay shipping.

>it in any of the factory alignment procedures or in the SAM's
>photofacts.

Well, I just got done fixing the TRC-449 I got from Lance (thanks again! Got the front-end fixed and receive is hot! FWIW, the second RF amp TR-5 was the culprit as I suspected -- it's a 2SC1730 and it's Vceo is just too low for the radio, a design flaw) and have the manual right beside me. On page 15 is the transmitter alignment section, and about the middle of the page is Step 4 where the procedure is to align the transmit coils while shoving 500 mV into the mic jack. Yet Step 8 is to set the modulation for 98% with a 200 mV input. Now there is a reason for driving the audio so hard in Step 4 and that is to make sure the signal path can handle the stress, because if it can cope with a 500 mV input then a mere 200 mV should be well within the safe operating area.

Now you claim to have worked on CBs for 30 years, yet you have never seen a procedure as I just described (on what was once a fairly common and popular radio)?

>Often the only reason given in the procedures to increase the audio
>input (And I have a nice Tektronix generator) is to verify proper
>operation of the modulation limiter.

I can send a pair of reading glasses with that book if you want.

>> One of the purposes of the
>>test is to see if any stages lock up, a problem that is much more
>>common with high-gain OP-amps produced since the 70's.
>
>Most CB radios made in the 1960- 1980 time frame do not use Op-amps.

.....uh, yeah. That's perfectly consistent with what I said. What's
your point?

>Some Uniden radios used them more recently, but not as audio amps.
>They were used as AGC amps and T/R switching.

Most OP-amps in modern radios (CB and other) are integrated into
special-purpose chips. Some older radios had OP-amps made with
discrete components.

>I have never seen an audio stage on a CB radio "lock up". The Hy-Gain
>623 used to have an interestingly annoying "design flaw" where if the
>modulator was driven too hard, it would shut down for a few seconds.
>You would loose receive audio until it recovered.

That sounds like a lock-up to me.

>>Resonance is also an issue that needs to be appreciated. As you noted
>>before, components change value over time. So a circuit that was not
>>resonant at the time of manufacture may be resonant 20 years later.
>>It's not a common cause of failure but I have seen it a few times.
>
>You should see what happens when a 7812 regulator goes into
>oscillation due to bad/missing bypass caps.

You should see my curio cabinet of failed components. It even includes
a shorted resistor (47K, carbon comp), something I was always taught
was absolutely impossible. But I show it off to visitors who stop by
and don't believe me, have them measure it for themselves, and they
walk away with a paranoid glaze over their eyes.

Hey look you dick. I could transmit with it, then say I didn't.
I could break the law, then weasel out of it on a technicality.
There's all kinds of ways to break the law and get away with
it. I know.

Ken

Besides, All I really wanted was a cool radio so that frank would say was I
was real 11 meter operator, because then I would be in great shape to get
some dick. Why else would I want to get on 11 meters and break federal law
if I wasn't trying to get laid by a super cool cb dude?

Now enough of that. I got my keyclown radio and now I Want some cock!!

Ok. That just whizzed way over my head. Why would the American Kennel Club have any interest in this type of thing? Their primary concern is different breeds of dogs - although they do draw the line at becoming concerned with Courtney Love.

Well I'm a business owner that has contracts with
the city of Issaquah Washington. As an independent
contractor with the city, I must adhere to their rules on affirmative action
employment.
So rather than hire a electrical engineer of 30 years
experience who was Caucasian, I have to hire an employee
of color, with less experience. That now means possibly more training,
inferior quality work, more issues with their work
because of their lack of experience.
Why as a business owner must I be FORCED to hire
someone of less experience to meet affirmative action
requirements? Why can't I just hire the right person for the
job, no matter what their color of skin is?

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner.
I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

okay then
i will pull into the shower and scrub his balls and all

tell me about a guy who knows me, after he has met me

i love a few strait guys myself
i beat or slap them often

someday i will tell you of the saga
but try to make friends is a good idea

OK, but one question: 1) What do you think you're achieving by doing that,
and 2) Are you going to narrow it down past a /24 subnet?

We live in a society. This has obvious benefits, but it also demands
some responsibilities. One of those responsibilites is to make sure
everyone has a reasonable opportunity to succeed and not become a
burden on our society. But because there are racist attitudes among
many employers, there are fewer opportunities for people of other
races. It then becomes the responsibility of everyone else to pick up
the slack left by the racists. That's why we have affirmative action.

So don't blame the government and don't blame people "of color". Blame
Canada..... (hehe, just kidding). The problem originates with racist
attitudes which have been around for quite a while and aren't going
away anytime soon. By cooperating with Affirmative Action you are

shouldering the responsibilities that are shirked by racist employers,
and for that you should be commended -- after all, nobody is forcing
you to do business with Issaquah, are they?

If one goes to school, gets an education, promotes that education by
further schooling, aggressively seeks employment, maintains that
employment showing a commitment to the employer and his business,
then he's is not being a burden on society. That opportunity is there
for almost everyone, they have to "want" it, not expect it.

> But because there are racist attitudes among
> many employers, there are fewer opportunities for people of other
> races. It then becomes the responsibility of everyone else to pick up

I don't believe that's prevalent anymore. If we were in the 50's, 60's
& even the early 70's I would say yes, but I feel it's not the case now.

>
> So don't blame the government and don't blame people "of color". Blame

Those will always be around, affirmative action or not, but again
I feel that's far & few in between.

> By cooperating with Affirmative Action you are
> shouldering the responsibilities that are shirked by racist employers,
> and for that you should be commended -- after all, nobody is forcing

If my business is with them, why must I be forced to "not" do business
with them? Because my company has 12 employee's, all qualified to
do the job, but none are of "color" or just one person, so that's not
enough.
My last job I was a manager, I did the hiring & firing and to me I didn't
care what color you were, just so you did the job & did it well. That
attitude is the same where I'm at now.
We have people of color, women working there. I remember a person
of color hired and was asked to take the owners truck over to the car wash
and have them wash it. He refused and said it was a job that degraded him.
I LOL!!! I had done that very same job a dozen times, among many others
when I first started there, I didn't care, just as long as I was paid.

It has lot to do with attitude, people have become complacent and
started
to live off of welfare, SSI, disability etc. Those programs were only meant
as
a crutch, but have grown into basically an income for those that don't want
to
work (I saw it for years when working in SF). Some truly need those programs
and don't abuse them, but more than not abuse it and almost never have to
work

because people like you & I support them with "our" hard earned taxes.

The reason is to cause flames via other groups, you responded to
another group at the same time. It's Doug's
way of getting his jollies, he is a sick person and the judge
wasn't wrong to order psychological counseling for him.

(Notice how lately he invokes my name in his replies to you, and you in
his replies to me. LOL!)

>Well, it's no coincidence that you and I bring

>out the "best" in our little psychotic friend.

And it's no coincidence you begin your very next post with an insult in
regards to the one that asked you to please illustrate or name this
other mystery hammie you claimed agrees with you that roger beeps are
illegal.

>Who says it has to be a ham?

Why,you did, Davie,,,go back and read your response to what I said, as
your memory has been savagely raped. You clearly responded that you are
not the only ham present in this group to maintain that roger beeps are
illegal. Of course, asking you to share your hallucination with the
group has caused your gears to slip...again.

>It's also no secret that his psychobabble

>seems to keep you going.

Coming from one who suffers vivid hallucinations and insists others can
view your hallucinations also, is quite closer to any "psychobabble"
than anything anyone else in this group has ever done, with the
exception of N8WWM who you have not only defended many times, but
admitted (after being caught) that you "fell into his bullshit". You
need to stop permitting your emotions to lead you around by the nose, as

anyone is able to come along and elicit your ire.

>At least back before you guys found a

>common love for the wrong side of the political
>spectrum....

An excellent example of your twistedness, as one who holds an opposing view to your own myopic views are not wrong, Davie. It is apparent in your ramblings that you indeed believe such self-serving and self-limiting statements, but as usual, you are self-projecting, as no one else shares your minority and radical views except these mystery hammies you continue to invoke but are unable to identify. Hey, it's all good, Davie,,people like you need comfort and conjured playmates can actually provide therepeutic benefits in children.

>I'm not the one who changes my screen name
>at the drop of a hat.

Quite right,,you're the one who changes their access path to the group with different servers at the drop of a hat.. You're the one that can not distinguish between fiduciary and judiciary, resulting in your inability to explain any differences between a dx'er and a speeder in regards to this "federal law" you incorrectly harp about.

You're the one who ignorantly and incorrectly hold a dx'er and and a speeder going faster than 70 MPH as a "federal criminal" based on your claim that the laws were enacted by the feds.

You're the one who incorrectly shouts that "roger beeps are illegal", based on nothing more than your inability to locate a law permitting them.

You're the one who incorrectly claimed other hams agreed with your stated ignorance that roger beeps were illegal and began stuttering over your claim when your hallucinations were observed empiracally, noted, and questioned.

You're the one whose posting history is chock full of insults to those with whom you disagree You're the one who claims your derogatory terms are not born of emotion.

In fact, if one were to bother, one could google "sandbagger" and check your posts to anyone who you ever disagreed with, long before you made me your inner personal demon and anti-christ. In fact, you have been told about your inability to maintain proper communications skill sans insult long before I ever pointed out your inabilities to do so.

But.....sharing your selective concern over what is routinely practiced in here by many illustrates your agenda. Whenever you are cornered with your own words, you run and attempt to distance yourself from them and make your posts personal, offtopic, and try to direct them towards anything else, as your bullshit is in the spotlight. Yes, Davie, you are the one that made all those claims above..only you, all alone, as no one

agrees with you,,,,except N8WWM. Now stop posting the gay porn. Your temper has the best of you, but you are laying quite the proper trail with your pal Dogie.
Enjoy. :)

>Dave

>N3CVJ

>"Sandbagger"

-
What makes you think
that "they" are on the wrong side of the political spectrum? Now think
about it Dave, Frank has said a number of times he is not a liberal, he
just doesn't like Bush's policy's.

>Yet he voted for Nader?(While also defending

>Kerry to the teeth) Doesn't that sound a bit off

>to you? If a conservative or even a moderate

>had a problem with Bush politically, do you

>think that they would vote for Nader?

Twist is what
I would say a liberal, but how does that make him on the "wrong side"?
Because you don't agree with them, that makes them on the wrong side?

>No, not at all. But trust me, the liberal side of

>the political equation has done little to help

>and far more to ruin this country at practically

>every turn.

If it wasn't for the liberal there would be NO country in which you
could reside and bash those whose views are far more tolerant and in
line with our founding forefathers than with your radical conservatism
based and rooted in hate and disdain for all those different from your
minority self.

>From the creation of the welfare state, to

>frivolous lawsuits, to the creation and

>expansion of federal taxes,

The creation and expansion of federal taxes is fundamentally necessary and a cornerstone of the democracy many refer to as a republic. It's not the intelligent GOPers opposing federal taxes, it's the over-zealous radicals that hole themselves up in compounds such as Waco with weapons and justify their actions by claiming incorrectly everyone else around them is evil and bad..just like you do when you take the Soma responsible for much of your incoherent babble and begin pining and longing for the days of yesterday and blaming the decline of society (reflected, according to you, on the cb radio) for your woes and what ails you.

> to affirmative

>action, to mollycoddling terrorists,

That's a great new term the Bush folks tossed out for their legions of sheople. I see you seized upon it faster than you acknowledged the White House report a week and a half ago that they were WRONG concerning their claims of WMDS. The next term you will be force fed will be "Freedom guidelines"....which will be the suspension of personal liberties in the name of protecting us, of course, from the undefined terrorist that has armchair generals and people like you cowering in fright.

>liberals

>have been on the wrong side of history, and

>the wrong side for Americans. I could list a

>whole host of examples, but this is not the

>place for that.

Of course it's not,,this is America, the country founded by liberals. Your freedom hating and America bashing can be better served by those you coddle,,the "terrorists".

Okay, I've been looking for a Super-Scanner for a while and can't find
one for sale. So I decided to make my own. The manual has enough info
to build a pretty close copy except for one detail: the boom length.
What should the spacing be when one dipole is the radiator and the
other two are reflectors?

And would there be any advantage to adding a little reactance
(electrical length) to a dipole when it's switched in as a reflector?

>Where is the proof that Bush is a "criminal"?

(How about his conviction for DUI? That alone defines him as a
criminal.)

>What is your basis for

>making such an outlandishly absurd and so

>typically partisan claim?

(Now there's a loaded question if I ever heard one. Regardless, I think
Twisty would me more than eager to provide an answer so I'll let him
take the first jab.)

Of interesting note, is when one has a conviction in a court of law on
his record, Dave vehemently lobbies his view they are innocent...not a
criminal.
Ditto for when one is listed on the rainreport and reported by the fcc
as breaking communication law.,,Dave lobbied for the innocence of
N8WWM..yet, when one is not found guilty in court of law, not charged
with a crime, Dave somehow feels qualified to pronounce one a federal
criminal, based only on what he refers his "empirical observational
skills", which bring us imaginary hams and hallucinations he
acknowledges but refuses to share.
Dave's world is no longer a factor.

Ken,

I just read your original post off google.

Recently I described it in the roger beeps thread but I can put it in a
nutshell for you.

I bought it because it's not full of bullshit like beeps and echos. The
price was right and I wanted an entry level 10M radio. I have not compared
transmit figures to the old vs new but I can tell you that the audio is

cleaner and a touch louder. I go for clean and cannot stand the ol "good buddy distorted ratchet jaw sound". All audio reports have been great. I highly reccommend it if you know what you are operating. It's not a knob twisty radio, there are functions on dual mode buttons, and easy to end up on a band you don't wanna be, you can lock down to certain bands if you desire. I have been happy with mine, works well in temp extremes, has good receive, excellent audio, and a great price. I do not regret the purchase one bit. Let me know if you have anyother questions. I even have internal pics somewhere I can e-mail if you desire.

Good day,

Chad

Hi, Chad.

Sorry. Got distracted by that flamer pervert no-life.

My original posting asked about the new full-time speech compressor,
dubbed the CP1. I want to find out:
(1) Whether it was only engaged for sideband
(2) How "processed" it made sideband TX sound
(3) How much of an inrease over normal did it provide, in dB if known
or in signal reports.

I asked Magnum these questions twice and twice got non-responsive
answer, probably from somone in Bangalore who never saw one.

>events). If the details from his testimony could be verified as
>factual then he might indeed be a criminal.

If that isn't the biggest double talking tap dance I ever saw, I don't
know what is. The facts are quite clear:
Either he was truthful and he took part in war crimes, or he lied
about it. Either way, he's a an opportunistic slimeball.

>But there are two parts to
>his testimony:
>
>1) that war crimes were committed in Vietnam, which has since been
>verified as factual.

There are many statements from other servicemen that say pretty much
the opposite. While some atrocities may have occurred, they were in no
way condoned, endorsed, or pardoned by the command structure.

>The problem is that everybody knew stuff like
>that was going on so it wasn't any big shock when Kerry made the claim
>in front of congress.

Everybody didn't know, as evidenced by the testimony of other
servicemen.

And isn't it odd that Kerry, a swiftboat captain, saw more atrocities
in the 4 months that he was there, than other guys saw in 2 or more
full tours of duty?

>2) that -he- committed war crimes in Vietnam, which has -not- been
>verified as factual. IOW, either he provided specific information
>regarding his conduct which the government chose not to verify, or his
>claims were nonspecific generalities which could not be verified.

>Assuming the former (that he made specific references to specific
>acts) then the question becomes one of why the crimes were not
>prosecuted. There were plenty of war crimes in Vietnam that -were-
>prosecuted, so war crimes were not always ignored. Nixon wanted him
>silenced, and it would have certainly been easy enough if he -was-
>prosecuted for war crimes, but that never happened.

Which then lends credibility to the notion that HE LIED. Along with
the other stuff he did while a part of the VVAW.

>So the only issue left is one of perception. What one person perceives
>as a crime may only be an act of war in the mind of another (a problem
>that is still evident today but you refuse to admit). That seems to be
>the case, and therefore it doesn't matter what he said. The -fact- is
>that Kerry's acts were never addressed by the government as war crimes
>-regardless- of how Kerry perceived his own actions.

IOW Kerry lied.

>> On the other
>>hand, if he didn't take part, and the whole issue was a blown up
>>fabrication, doesn't that make him a liar?
>
>
>No. As I stated before, people have different perceptions and
>interpretations about what constitutes a "crime", and the subject has
>been addressed in this newsgroup on many occasions when discussing the
>legality of FCC rules.

The FCC rules are pretty cut and dry. You operate above 4 watts of
power and/or on non-assigned frequencies, you are committing a
violation of federal law. The only "perception" issue is the one kept
alive only by those who refuse to deal with the reality of what they
are doing, or who try to justify it somehow by trivializing it.

>> Would you want someone who
>>lied like that to be your CNC? How many other lies did he make in the
>>aftermath of the who winter soldier debacle and the VVAW movement

Many murderers have been put in prison based on circumstantial
evidence. When this much smoke is generated, there will be a fire
somewhere.

>>> If you are really a supporter of
>>>the Republican party then you should keep quiet on political issues
>>>because you are giving your party some very poor representation.
>>
>>I am a conservative,
>
>
>That's fine. Label yourself if you want. But don't label me a liberal
>just because I don't share your beliefs.

Fine then. But I find it odd, but perhaps enlightening, that most of
the people I know with conservative ideals are quick to admit it,
almost proudly. While most of the people I know who are liberals hide
from the term, almost like it was holy water to a vampire. I have to
wonder why they feel the need to hide what they are? If you are
committed to your beliefs, then you should be able to admit them with
confidence.

That being said, what are your political leanings Frank? You are
certainly no conservative. And please don't try to pull a cop out and
claim to be "moderate".

>
>
>> and I support those who best represent my
>>political views.
>>

It's an institutionalized form of reverse discrimination.

No, that is not necessarily true. We have the responsibility as a
society to provide opportunities. But we bare no responsibility to
guarantee success.

You can lead a horse to water, but you can't make him drink.

>But because there are racist attitudes among
>many employers, there are fewer opportunities for people of other
>races. It then becomes the responsibility of everyone else to pick up
>the slack left by the racists. That's why we have affirmative action.

I think we all understand why AA came to be. The problem is that what
AA does in essence, is to fight discrimination with reverse
discrimination.

Is it fair, that someone who is not a part of the recognized minority
(And this is not just blacks. It could be women, latinos, gays, or
anyone who isn't a WASP male), who goes through the right hoops,
studies hard, and works to make his place in society, only to have his
"place" taken from him and given to an arbitrary person of recognized
minority status, who did not work nearly as hard?

>So don't blame the government and don't blame people "of color". Blame
>Canada..... (hehe, just kidding). The problem originates with racist
>attitudes which have been around for quite a while and aren't going
>away anytime soon.

Minority people share much of the responsibility for their own
situation. Many throw up their hands when things get tough and simply
blame it on the "white folks". While racism is still alive and well in
many places, it's a shadow of what it was 50 years ago.

> By cooperating with Affirmative Action you are
>shouldering the responsibilities that are shirked by racist employers,
>and for that you should be commended -- after all, nobody is forcing
>you to do business with Issaquah, are they?

I'd be curious as to some of the claims of racism. How many people of
recognized minority status who claim "racism" or discrimination, are

simply playing that card as a cover for simply being inferior to another potential job candidate?

Then you have to consider that the more we make laws and policies that highlight and call attention to our differences, the more they will remain? The answer to true equality in not to emphasize our differences, but to eliminate them.

Dave

1804. HAVE YOU HEARD THE GOOD NEWS!

Newsgroup: rec.radio.cb
Date: 2005-01-26 17:32:04 UTC
From: google_groups_web@yahoo.com
Message-ID: <1106760724.245393.268470@c13g2000cwb.googlegroups.com>
Source record: 195443

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner.
I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

>
>
>I don't believe that's prevalent anymore. If we were in the 50's, 60's
>& even the early 70's I would say yes, but I feel it's not the case now.

I never see racism in my daily conduction of business. We employ all
sorts of diverse ethnic people. Nobody even thinks about it.

In fact, when I see some of the older members of my family and they
let out a racially insensitive comment, it makes me cringe.

But there are people of recognized minority status who "play" the
system. The problem is that when the majority tries to open up dialog
to address this subject, they are shouted down and demonized by the
opposition by calling the discussions "racist", "sexist", or
"xenophobic". I applaud Bill Cosby for speaking out and highlighting
many of the problems which are affecting the black community. Maybe
coming from one of their own, the dialog might stand a better chance
of happening.

It's the whole liberal culture of deflecting responsibility. A
conservative believes in personal responsibility. Meaning that if you
run your foot over with a lawn mower, you smack yourself in the head
for being an idiot, and then head to the emergency room. You don't now
sue the lawn mower company and try to make a windfall from it.

>> to the creation and expansion of federal taxes,

Source record: 195449

I bought a "blue light" magnum 257 in December 2004. At the time it
was advertised as having a "top gun" modulator. Apparently this was
in error, 'cause the ad was quietly changed to "sp-1 compressor". I
decided to keep it anyway because it is a really pretty radio. It
also works very good. It is so simple to modify and tune up. Just
alittle research on the 'puter is all it took. I don't think the
compressor adds a whole lot. My magnum is mated to a kl500 linear
amplifier which puts out a full 300w am and it works flawlessly.
Don't spend more than $169. They are also quite compact, it's fits
nicely in my import car. You will like it.

I like to get on 10m and jam the piss out of those faggot ham op's.
hehehehe. They are so jealous of me.

ToeJam

I don't know who posted this stuff, and I really don't care, because I'm a big enough man to know it's Childish crap.

But I wll warn you guys, who are doing this, N8ECN, Joe, who is mentioned in that little parody of my old bio, if he ever catches you guys... You all gonna be sucking meals through a freaking straw for a long time. You can count on that. Joe's pissed as hell about this crap, and he's gonna be looking for N8WWM and friends.

Just a Word of Warning,

-Chuck K8CPA

K8CPA
Okay, this is the place where I tell you how I
came to know how fucked
up I am.... and all the personal information about
me. I will try and
answer all the questions:

Date of Birth: June 28, 1972 <in the fall of 71 my
daddy fucked a pig,
ya see>

Place of Birth: Detroit, Michigan <in an alley
behind the unit block
of Waterman Avenue>

Religious Information: Well, first off, I am NOT
heterosexual! I am a
faggot! I accepted penises as my personal Lord in
1980. I was all of
10 Years old, I knew exactly what I was doing, I
knew that if I didn't
get cock in my mouth, I would not See the Lord in
the rapture of it's
jizz pulsing. I have been butt pumped nightly for
12 Years. Although,
I was "Backslidden" for about 6 of those years,
while screwing female
barnyard animals. I am now back serving my Lord
penis. I would like to
Thank the Rev. Jack Hizhogoff of Detroit Gayboy
Outreach (Web at:
http://www.dgo.fag) for standing in the gap and
slapping his manly
dick up my fat faggot ass, and for a playroom
where people like me,
who were burned by chickenhawks with syphylitic
dicks and fellow fags
in general, could come and give their hearts back
to the Lord penis.
My only regret is that Rev Hizhogoff had to start
pushing his manly
dick in my fat faggot ass to the point where I
could not bear to bend
over anymore, and I returned to my favorite
pastime, cocksucking in

the men's room of the Detroit bus station.

"Burned" by the syphylitic cocks in my mouth and
asshole?: Yep, Sure
was.... I was... like I said before, I was sucking
when I was 10,
(around 1980), I was originally sucking just
anyone, especially born
again Christians and other mentally fucked up
Baptist types like me. I
loved those guys when theyd tell me to tongue
their assholes.
Condoms were a BIG no-no.... and I believed it!

Speed ahead 4 years. in 1984, The Baptist Church I
went to had a bit
of a controversy, The Pastor had resigned because
he was caught
bobbing on my young fat faggot pee pee, and things
there were in a
state of chaos, and my mom did not want to suffer
having to put up
with my faggot punk boy ass at home. She enrolled
me into the Detroit
Institute for Hopless Gayboy Fatass Chumps. I
started attending and
believe me, going to a Full-TILT anal only gayboy
school. after
attending one with a stated preference for
teaching Hopless Gayboy
Fatass Chumps to mainly suck dick, was a MAJOR
SHOCK to my system! But
one thing kept me from leaving the place, was the
fact that these
people seemed to really love the Lord Penis. and
there was this one
guy, named Robert Snyder, Who played the drums,
like John Bonham,
(from Led Zeppelin) and we got along great....
(Not to mention he
would let me drink his jizz on the sly. That was
HOT! least *I*
thought so! Hey! I was 14 years old, and my
hormones were at full
TILT! So SUE ME!) (By the way, Snyder is now
married to MoparHolic and
living in Ohio. I'm very happy for him.
Anyhow... After being there for about a year. I
started being
interested in playing drums for them, as I was a
drummer, from a

young age... and I wanted to use my talent for the Lord Penis. Well, I
eventually got the nerve to ask if I could play for them, and they
said sure, as long as I would give em all head before each

show! AWESOME!!!... My first time playing for Detroit Institute forHopeless
Gayboy Fatass Chumps was a nightmare! I was scared, I
totally forgot how to play because I was violently burping up the
sprem I had sucked down before the show.! I was THAT scared! Anyhow...
speed ahead to age 19... I was changing as a person, things were
changing at Detroit Institute for Hopeless Gayboy Fatass Chumps, as
well. and a bit of a disagreement rose up between me and Snyder. I
wanted to suck their cocks the night before the show instead of
immediately prior to it. They said they needed the rush in order to
play better, and I was asked to step down from the music ministry.
Needless to say I was crushed. and very upset at Snyder In fact. I
didn't think I'd ever be able to forgive him for that... Anyhow... I
entered into what I called "My Dark Years" from age 19-26... Drugs,
Drinking, eating 7 meals a day of Burger king, Dominos Pizza
and Taco Bell in order to make myself an even bigger Hopeless Gayboy
Fatass Chump.... and when I found out that Snyder had turned
heterosexual, I really went off the deep end... until...

MY MOMENT OF CLARITY

Well, when I was around 26, I was totally burned out on the
Dominos Pizza... I was just sick and tired of being sick and
tired... I needed cocks rammed up my Hopeless Gayboy Fatass Chump poop
chute and I needed it BADLY!!! the people I was

upset at were gone
from Detroit Institute for Hopeless Gayboy Fatass
Chumps. I was not
getting any older... and I was ready to stop
running from the Lord
penis. But I had issues to resolve in my life...
How could just Go
back to the fags that had only "screwed" me and
wouldnt let me
suck cocks in the first place? I still felt like
I'd been wronged! But
I had the Clarity moment of a lifetime... This
thought crossed my
mind...

"I was a FAGASS PUNKBOY MOTHERFUCKER BEFORE I came
to the Detroit
Institute for Hopeless Gayboy Fatass Chumps

Why am I allowing something that happened 7 years
ago, keep me from
serving my God, the Penis?????????

My Return to total Fagassedness!

Well, I was 26 years old... I was wanting to come
back full time to
Lord Penis. But I wasn't going back to Detroit
Institute for Hopeless
Gayboy Fatass Chumps (at least not at that
time!!!) I had heard about
a church called DGW (short for Detroit Gayboy
Outreach) and I'd heard
in the past that it was a nice place...
So..... I wanted to be
where the Holy Spirit of the Lord Penis was... and
there I was... I
came to the church on Ann Arbor Trail... my first
experience there was
a interesting one, I came in the parking lot...
puffing on a 7 year
old kid's cock, (in my years of being Backslidden,
I picked up a
nasty 2 child a day, sucking habit...) I finished
my child, and went
in, and right away I heard SCREAMING in my ear...
"what are you doing
here???" "these are the people that Screwed you,
but would not let you
suck dicks!" act..... and when the song service
started, the Holy

Spirit of Lord Penis fell, and I became very uncomfortable, to the point when I had to leave! and I did!, I remember a usher, running after me and saying where are you going??? I remember looking back at him and saying... "I can't handle this SHIT I got to get out of here!" and I left.... Well, that week... I sort of prepared myself for service to mens dicks next week, I took my Book, Gay Sex For Dummies to work. (I worked midnights as a Security Guard, so I could walk around the ghetto apartment complex I patrolled and peek in windows at sleeping little boys. and I had lots of time to masturbate...) My mother realized I was fantasizing about kids nuts.... I found myself reading the Word, and Praying for a big hairy chested man to suck off.. by Sunday, I knew I was ready to come back... Went back that Sunday.... they had a Illustrated Sermon on fellatio with pictures from several fag magazines, it was great, and needless to say, my Hard cock, Melted in the presence of the Lord Penis. and I knew that I wanted to come home.

I thank the Lord Penis for his Love, That takes us whacked out people as we are, and makes us his Servants....

Where am I now... : Currently Attending Adult classes at The Detroit Institute for Hopeless Gayboy Fatass Chumps.

HAM RADIO?!?!?!?!?!?!?I BETRAY IT AND WORSHIP ILLIGAL FAGGOT KEYCLOWNSBECAUSE THEY LIKE SUCKING COCK AS MUCH AS I DO!!!!I was, I guess you could say, Born into the CB FAGGOT Hobby... My Father, was a Dyed in the wool CB FAG... I even had a stint in the CB radio hobby as well... Anyhow, one year (I think I was around 8 Years old...) my parents and I went to have sex with my Grandfather's

Sister and her German Shepherd, in Conway, Ark,
which is the world
capital of CB FAGGOTS. To say the least, was
totally impressed with
the FAGGOT CB Hobby, because it satisfied my
craving to run my faggot
mouth constantly AND to suck cocks!!!. and for
years I did nothing
about it, just sucking dicks constantly and that
linear tuning on
those tube type ILLEGAL FAGGOT KEYCLOWN amplifiers
was just too hard
to learn. Speed Ahead to age 14, a friend of mine,
Joseph Hampton
(Ham call sign N8ExtremeCockNosher-but ALSO a
secret ILLEGAL FAGGOT
KEYCLOWN) who lived across the street from me, and
also was interested
in getting his dick polished as well.. Well, we
had some gay sex
together... (you see this was when you had to be
secretive about your
gayness! I was KB8HHZ (hugely horny for zebra!)
and Joe was KB8HGL
(Hungry Gonad licker!)... I believe me and Joe
were originally
licensed in 1989....

On April of 2000. The FCC Restructured it's
licenses... and I paid a
renegade VE 50 bucks and Received my General Class
Ticket... I often
masturbate while thinking of linears for ILLEGAL
FAGGOT KEYCLOWNS. And
really think Riley is mean. Maybe if I sucked his
dick he would not be
after traitor scumbag shithunk fagboys like me.

My Call? Is a Vanity call that I paid for, it is
my initials! Because
as a Hopeless Gayboy Fatass Chump, I need
something like that for my
ego.

so there you go!

I hope this answers everything you wanted to know
about me!

Ken,

(1) I believe it's on all the time
(2) Not at all, just louder on average, sounds great on SSB
(3) Well, tough question, it will bring the average level up as it's mostly compression, but as for seeing it on an S-meter I can't honestly answer.

I found these 2 posts about K8CPA on the
web...interesting stuff.

He seems to be almost as queerboy as twathed.

Happy holidays gang!

Chukkee the gayboy jizz likk
Sucks a throbbin thrustin dick
There aint a cock on the planet
Chukkee wouldn't gladly lick

All of the other gayboys
Used to laugh and call him names
They loved to taunt poor Chukkee
And toss him in the newsgroup flames

Then one foggy Christmas eve
Twithed came to say
"Chukkee with your lips so bright,
Won't you wash my nuts tonite?"

Then how 'ole Chukkee loved it
As he bobbed up and down
That is the story of Chukkee
The little gay fag keyclown

Of course it's Doug. Google "n8wwm" and check his entrance into this group. He was reprimanded repeatedly for entering his gay talk and fondness for homosexual topics into this group prior to the deterioration you now witness. He was driven underground and the rest is chickenhawk history.

From: echo@echo.net (I love roger beeps)
I bought a "blue light" magnum 257 in December 2004. At the time it was advertised as having a "top gun" modulator. Apparently this was in error, 'cause the ad was quietly changed to "sp-1 compressor". I decided to keep it anyway because it is a really pretty radio. It also works very good. It is so simple to modify and tune up. Just alittle research on the 'puter is all it took. I don't think the compressor adds a whole lot. My magnum is mated to a kl500 linear amplifier which puts out a full 300w am and it works flawlessly. Don't spend more than $169. They are also quite compact, it's fits nicely in my import car. You will like it.
I like to get on 10m and jam the piss out of those faggot ham op's. hehehehe. They are so jealous of me.
ToeJam

>
>I think we all understand why AA came to be. The problem is that what
>AA does in essence, is to fight discrimination with reverse
>discrimination.

Yes it is. The difference is that opportunities are lost when racial
discrimination is based on prejudice; lost opportunities are regained
when discrimination is used to counter the consequences of prejudice.

>Is it fair, that someone who is not a part of the recognized minority
>(And this is not just blacks. It could be women, latinos, gays, or
>anyone who isn't a WASP male), who goes through the right hoops,
>studies hard, and works to make his place in society, only to have his
>"place" taken from him and given to an arbitrary person of recognized
>minority status, who did not work nearly as hard?

I think you switched positions in mid-speech, but I understood what
you were saying. I lost my job at HP because of AA but I didn't lay
down a die. I had a pretty good resume and a fine recommendation. It
wasn't long before I had another job. And it worked out for the best

since the local HP plant turned sour a short time later. I have plenty
of opportunities and I can afford to give up a few for a good cause.

>>So don't blame the government and don't blame people "of color". Blame
>>Canada..... (hehe, just kidding). The problem originates with racist
>>attitudes which have been around for quite a while and aren't going
>>away anytime soon.
>
>Minority people share much of the responsibility for their own
>situation. Many throw up their hands when things get tough and simply
>blame it on the "white folks".

You actually think that kind of projection is exclusive to minorities?
Look in the mirror, Dave -- in many of your posts over the years you
have clearly stated that you don't want to share the responsibilities
of society, so you blame all the country's problems on the liberals.
That's prejudice, Dave.

> While racism is still alive and well in
>many places, it's a shadow of what it was 50 years ago.

It's just hiding in the shadows. And in the airports since the Patriot
Act went into effect. Racial profiling, despite Bush's excuse that it
weeds out terrorists, is nothing more than racial discrimination based
upon prejudice.

BTW, ever hear of Mark Fuhrman? He lives in Idaho right across the
state line from here, and just a few miles from where Richard Butler
had his neo-Nazi compound which drew support from anonymous people all
across the nation. But I suppose you're right, racism is pretty much
dead, huh?

>> By cooperating with Affirmative Action you are
>>shouldering the responsibilities that are shirked by racist employers,
>>and for that you should be commended -- after all, nobody is forcing
>>you to do business with Issaquah, are they?
>
>I'd be curious as to some of the claims of racism. How many people of

>a problem.

You were offended because my claims were substantiated by facts that
conflicted with your belief system; to wit:

Fact: Bush was a drunk and was convicted for a DUI.
Fact: Bush was twice a failure in the oil business.
Fact: Bush failed in his first and only run for congress.
Fact: Bush failed as a campaign manager.
Fact: Bush was accepted into the NG less than a day after he applied
(and a related fact: nobody was accepted into the NG that fast during
the Vietnam years unless someone was pulling some strings).
Fact: Bush failed to show up for a physical required to maintain his
flying status, and therefore could not have fulfilled his duties and
responsibilities in the NG.
Fact: Nobody (as in none, zero, zilch), not ONE person remembers Bush
being at one of his assigned duty stations.
Fact: Bush stated publically that a presidential campaign could be won
with only the support of the conservative Christians.
Fact: Bush admittedly "found God" shortly after making the above
statement.......

Shall I continue? Or do you need time to verify those facts first?

David Berkowitz; either the dog spoke or he lied about it.

Carter; either there was a UFO or he lied about it.

Bush; either he "found God" or he lied about it.

Bush; either UBL is no longer a threat or he lied about it.

Bush; either Iraq had WMDs or he lied about it.

Dave; either you violated federal laws with your illegal radio
operation or you lied about it. So you are either a criminal or a
liar. Which is it, Dave?

> Either way, he's a an opportunistic slimeball.

And Bush is an angel, huh?

>>But there are two parts to
>>his testimony:
>>
>>1) that war crimes were committed in Vietnam, which has since been
>>verified as factual.
>
>There are many statements from other servicemen that say pretty much
>the opposite. While some atrocities may have occurred, they were in no
>way condoned, endorsed, or pardoned by the command structure.

"May have occurred"? You never heard of the Mai-Lai massacre? You never saw that Pulitzer Prize winning photo of a Vietnamese man getting his brains blown out execution-style by a US soldier? What else have you missed, Dave?

>>The problem is that everybody knew stuff like
>>that was going on so it wasn't any big shock when Kerry made the claim
>>in front of congress.
>
>Everybody didn't know, as evidenced by the testimony of other
>servicemen.

I see you also missed several episodes where US servicemen returned from Vietnam and were shunned and called baby-killers (among other things). It's not like it wasn't all over the TV news, plastered on magazine covers, covered extensively in the newspapers..... oh, but there's that liberal media bias again. Geez, Dave, they sure have a way of supressing the facts, don't they?

>And isn't it odd that Kerry, a swiftboat captain, saw more atrocities
>in the 4 months that he was there, than other guys saw in 2 or more
>full tours of duty?

So how did you quantify that?

>>2) that -he- committed war crimes in Vietnam, which has -not- been
>>verified as factual. IOW, either he provided specific information
>>regarding his conduct which the government chose not to verify, or his
>>claims were nonspecific generalities which could not be verified.
>>
>>Assuming the former (that he made specific references to specific
>>acts) then the question becomes one of why the crimes were not
>>prosecuted. There were plenty of war crimes in Vietnam that -were-
>>prosecuted, so war crimes were not always ignored. Nixon wanted him
>>silenced, and it would have certainly been easy enough if he -was-
>>prosecuted for war crimes, but that never happened.
>
>Which then lends credibility to the notion that HE LIED. Along with
>the other stuff he did while a part of the VVAW.

Again you mock logic by trying to invoke the opposite from a denial of
the precedent. It neither lends nor detracts from your assumption that
he lied. It simply states that there is no proof to make any factual
determination either way.

>>So the only issue left is one of perception. What one person perceives
>>as a crime may only be an act of war in the mind of another (a problem
>>that is still evident today but you refuse to admit). That seems to be
>>the case, and therefore it doesn't matter what he said. The -fact- is

>>
>>
>>Do you think Kerry's official military records are forgeries?
>
>No,

Very good. Now lets move closer to the source of your confusion. Shark said to you in another post, "...a DD214 is a DD214, no matter how you try to dissect it Dave, so if it says Kerry was discharged, he was discharged."

I think that may be one source of your confusion. Back in Kerry's day a DD-214 was a "Report of Transfer or Discharge", Form 1 NOV 55. Just as stated in the title, the form was used for both transfers -and- discharges. Kerry's records show more than one DD-214 -not- because he received more than one discharge, but because a DD-214 was filed each time he transferred to a different duty station.

Now my own DD-214 has a different title, "Certificate of Release or Discharge from Active Duty", Form 1 JUL 79, which was a year -after- the end of Kerry's military service. Obviously the scope of the form has narrowed and is no longer used for transfers within active duty.

Apparently, someone unfamiliar with the scope of the earlier form noticed that Kerry had several DD-214's and ASSUMED, based on the scope of the more current form, that either he was discharged more than once, his discharge was in error, the documents were forged, or some other sinister plot. A false assumption based on ignorance -- and it's ignorance because the facts are in the documents themselves and can be seen by anyone who is willing to look.

> but they only tell part of the story.

By golly you're right..... his service number and SSN are blacked out in all the documents. Why didn't he release that information? What dark secret is he trying to hide? OMG, it's a liberal conspiracy!!! ROTFLMMFAO!!!

>>>You discard what I provided because you refuse to acknowledge the
>>>possibility. You don't want to believe it so you deny it. You came up
>>>with some sort of "font analysis" on one document, and concluded that
>>>it was a forgery, so then you projected that conclusion to all the
>>>rest of the evidence.
>>
>>
>>Once again, I used the same standards that were used to discredit the
>>CBS documents.
>
>Has it occurred to you that the font issue

See? You -already know- why those documents are fake!

> could be explained by the
>OCR software used to digitize the documents?

Gee, why didn't CBS think of that!

>> And the rest of the website was nothing more than
>>speculation without facts. Such as assumption of guilt in the absense
>>of evidence, and misinterpretation of official military records.

>
>Many murderers have been put in prison based on circumstantial

Those are questions you should be asking a liberal. In case you
haven't noticed, I have never been shy about admitting anything, let
alone my political views. If I was a liberal you can rest assured that
I would be the first one to use such a label.

>That being said, what are your political leanings Frank? You are
>certainly no conservative. And please don't try to pull a cop out and
>claim to be "moderate".

None of the above: I'm an American. My bible is the US Constitution.
My loyalty lies with those who respect and defend it. My enemies are
those who abuse and attack it. Those are my political "leanings",
plain and simple.

>>> and I support those who best represent my
>>>political views.
>>>
>>>I also believe in the history and honor of our country, its military
>>
>>
>>Were you ever in the military, Dave?
>
>Irrelevant.

No military service and you can't even admit it. Were you a draft
dodger? No, I don't think you're that old. Were you kicked out?

Couldn't make it through boot camp? Or are you just ashamed that you
didn't serve when you had the chance?

>>>and the judgement of its leader in matters of national security and
>>>enemies of the state.
>>
>>
>>You do understand that there are three branches to the government,
>>don't you? Bush isn't in the Judicial branch.
>
>And your point is? The judicial branch is responsible for interpreting
>the law.

Exactly. Interpretation of the law is not Bush's job.

I think that's 29 inches, not feet. But you made me realize that the
feedpoint impedance of the dipoles is going to be lower because of
their proximity to each other, and that coax is probably cut to make a
conjugate match. At least it's possible. Maybe I'll just go with a
phased array.....

If its 29", then those elements at the most are 29" from the center
hub. I think you would probably be happier with a phased array. A
lot easier to control your patterns and matching.

If qsl.net ever comes back up, this link

http://www.qsl.net/ve3sqb/

had a program to design a super scanner.

>You give me far more credit than I deserve.

I give you credit for exactly what you deserve.

>I use a single newserver to access this

>newsgroup. Nothing else.

Nevertheless, your access path has changed

You have failed to prove otherwise. Your opinion in that regard is
worthless.

You're the one that can
not distinguish between fiduciary and judiciary, resulting in your
inability to explain any differences between a dx'er and a speeder in
regards to this "federal law" you incorrectly harp about.

>I never made that claim.

>Dave

>"Sandbagger"

>N3CVJ

It's not a difficult matter, Dave, but it has you beside yourself with
confusion and pain.
Being forced to face yourself yields some interesting retreats from your
dulled senses.
The only criteria you submitted for your ignorant and erroneous claim
that one who dx'es is a "federal criminal", is that they are breaking a
law enacted by the federal government....so goes the 70 MPH mandate. Let
us know when you prevail over this inner struggle I caused you, and let
us know which side of you won.

Yes.. Roughly equivalent. What's the application? You building a dipole
or an inverted V?

Sticking a 6 foot Firestick in the attic, using eight 9' wires as a ground
plane. Then when the weather warms, I stick a Imax in a tree.

I found the file and ran it. For 27MHz it gives a radius of just over
38" which, I'm pretty sure, is a bit longer than the 29" coax that
feeds each dipole. Apparently there are two versions of this antenna:

The first is the original and has a cardioid radiation pattern. The
second is VE3SQB's version that has better forward gain and deep nulls
to the rear corners, but has a larger radius and the dipoles are fed
with a 1/4-wave section of coax. It seems that the second version
behaves more like a phased array instead of a parasitic beam.

I might email the guy and see if he has the specs for the version with
the cardioid pattern.

You shouldn't need a choke for that, but it won't hurt either. Keep the
plane of the coil perpendicular to the antenna (the firestik) in that

setup, and drape the wires for the ground plane over the top of it.. If you can get a foot or two separating the coil/choke and the ground plane wires.

That is going to be tough. I can definitely get it under, but not by a a foot.
When you mean perpendicular, you the outer edge of the coil directly under the
antenna, king of the antenna point up at 12 o'clock at the coil? At least, that
is the way I remember perpendicular, being a vertical touching the horizontal
forming a T.

No.. that would be parallel..

Make a circle with your forefinger and thumb. Stick your other
forefinger thru it.. That's how it should look, only not touching. If
you can't get it a foot up, get it as far up as you can, and drape the
ground plane wires over top of the coil. Not REALLY critical, but it
will help with matching.

Yep.. you got it this time. Looking down the antenna, you're looking at
an "O" (the choke) with the antenna being the center point of the
circle. Wires physically above the coil.

Good luck.

That's what us HAMs are supposed to be here for.

Shhhhh. That a "way back" machine, and it's only a prototype.

But you make a good point. But like Sherlock Holmes once said, when
all the other possibilities are excluded, what remains, however
unlikely must be the answer. The supply was otherwise in good shape,
the load was nominal. The only thing "bad" was the cap.

Oh, and I've seen equipment which did have leaky caps, and they were
hot to the touch and some have had the rubber plug in the bottom
partially ejected. They didn't fail violently in an explosion, but
they did out gas from excessive leakage.

>be enough power to make it explode?

The evidence that I've seen would tend to answer that question as a
yes.

> Hardly, since a lot of that power
>is shunted to ground and not dissipated in the cap.

A dead short is a shunt to ground. When the cap is simply leaking, the
cap becomes a resistor, and heats up like one when too much current
runs through it. It would only take a leakage resistance of around 4K
Ohms at 800 V to make it happen.

> It will just vent
>until it's empty or shorted.

That depends on the design of the cap, and how much current is being
dissipated. Explain it anyway you want. I'm telling you what I've
actually seen.

>>>Begin with the power supply. It is designed to supply a limited amount
>>>of power, usually a little more than for the intended use.

>
>
>And you are forgetting that the bigger the load the bigger the cap,
>and therefore the more power it would take for a leak to heat that cap
>to the point of exploding.

Caps are rated by three things, capacitance, voltage rating and
temperature. In most sweep tube amps and tube CB radios, I rarely see
more than about 40 uF in filter caps. Voltage rating depends on the

circuit. Most amps use 450V caps in series.

>>> In fact, your
>>>leaky cap draws so much -additional- power that it evaporates the

Are we now talking about solid state CB radios? That's a whole
different set of circumstances from the tube amps and radios we were
using as examples.

> Also, electrolytics are not
>always fixed at ground potential, such as when they are used as a DC
>block in an audio line. If the offset fails, the cap pops.

Absolutely! No argument there. But that's not what we were talking
about before.

> There are
>also instances where an abnormal AC component swings the normally
>positive side of the cap negative. The cap voltage can get reversed by
>rectification when a pull-up resistor fails. Etc, etc. Geez, Dave,
>you've been doing this for 30 years and you didn't know this stuff?

Not as applied to the tube amps we were talking about. If you switch
the conditions of the discussion, then the outcomes will change as
well.

>>> This takes much less power than brute-force heating of a
>>>cap. If a low-voltage electrolytic blows up, the reason is almost
>>>always due to reverse current. High-voltage electrolytics don't blow
>>>up nearly as often because they are rarely subjected to reverse
>>>current.
>>
>>Which makes that an unlikely reason for cap failure.
>
>
>It means high-voltage electrolytics are less likely to fail than
>low-voltage electrolytics. Nothing more.

In my experience the opposite happens. You see, while a 5K leakage
resistance is more than enough to draw 200 watts from an 800 V supply

and heat up the cap until explosion, that same 5K Ohm leakage across
20V (A typical unregulated voltage in a CB power supply) will only net
about .08 watts. Hardly enough to heat the cap to explosion. So in
this case, if a cap blows, it's normally the result of either too high
a voltage (exceeds the cap's rating) or reverse voltage.

>>>>Also, if you recall how the HV power supplies were designed in a

That is something I've never heard. I've never heard a cap "whine". I
have heard them "sizzle" right before they out gas.

Yes it will, but it won't kill the cap. Caps are designed to handle
ripple. That's their job.

>>> If there -is- much ripple then the cap isn't doing it's
>>>job, the reason being either the cap is weak or the load is too big.
>>

>
>
>Again, not necessarily. The DC component may stay within norms but the
>AC component (ripple) will increase under load. That's just a fact of
>life. Haven't you ever studied the basics of power supplies?

I could write a course on power supplies.

An unregulated power supply will decrease voltage as load increases.
If the supply is at normal expected voltage, then the load is not
excessive. A regulated supply is a different issue. The regulated
output may remain at normal, while the unregulated "reserve" drops,
along with a proportional increase in ripple.

The reason ripple increases is due to the R/C time constant of the
circuit. When the load increased, the apparent resistance across the
cap drops and the discharge rate increases to the point that it looses
the capacity to hold the supply up in between ripple pulses.

>>>Whatever the cause, the cap sees that ripple as AC current which
>>>causes heat dissipation in the cap due mostly to hysteresis (high

>the cause of failure when there's no other obvious cause. Maybe they
>should just hire you and your crystal ball, huh?

If a cap explodes due to an excessive load, then the evidence of the
failure which cause that excessive load should be evident. If not then

you can't conclude that the cap died due to ripple.

You are right, in a sense, that you can't always tell what DID cause
the cap to blow, but you can determine what DID'NT cause it to fail.
It then becomes a simple process of elimination.

It's like forensic science. We reconstruct an incident based on the
evidence in the aftermath.

>>>You missed capacitor lab, didn't you? Excessive load will draw down

I don't understand the relationship of what you are trying to
simulate. I'm talking about filter caps in a power supply now. I
should be able to "simulate" this by simply placing a large load
across the power supply enough to drop down the voltage and increase
the ripple. If the rectifier or the transformer doesn't give up the
ghost first,, then the cap should blow according to your theory.

A GE #47 bulb is close to 50 Ohms at 4 watts of power. The impedance
changes, of course, with more or less power.

That said, they're still a fragile resistor.

> They also make great regulators because of
>their non-linear characteristics.

But they can't handle much current.

>light bulbs make pretty decent audio compressors.

I prefer Op-Amps.

> So you still say
>that light bulbs aren't resistors? Hogwash. If it's useful as a
>resistor then it's a resistor.

I never said they weren't resistors, I said that they aren't practical resistors to substitute in most circuits. A light bulb's resistance isn't constant and changes with voltage. Not something you normally want.

>
>>> A resistor necessarily dissipates
>>>power, and in a light bulb that power is dissipated as light (and
>>>heat). The only real question here is why household light bulbs fail
>>>regularly while automotive light bulbs last for a much, much longer

>Tungsten, one of the strongest metals on the periodic chart, is "shock
>prone"? And what difference does the voltage make? It's the current
>that causes the filament to heat up. Which is true regardless of it's
>thickness, too.

Current is a function of voltage divided by resistance. A higher voltage bulb can make the same current with a higher resistance. They usually control this with the length and thickness of the filament. Shorter, thicker filaments are more durable. That's also why a 25 watt bulb normally lasts longer than a 100 watt bulb.

>Vceo is just too low for the radio, a design flaw) and have the manual
>right beside me.

Actually TR5 is the 1st RF front end. it's the very first active
device in the chain. TR4 is an AGC clamp. The second device is the
mixer and it's a 3SK458 FET.

> On page 15 is the transmitter alignment section, and
>about the middle of the page is Step 4 where the procedure is to align
>the transmit coils while shoving 500 mV into the mic jack. Yet Step 8
>is to set the modulation for 98% with a 200 mV input. Now there is a

>sure the signal path can handle the stress, because if it can cope

>with a 500 mV input then a mere 200 mV should be well within the safe
>operating area.

Hmm.... My test procedure for that rig used 5mV to set 50% modulation, with VR6 and 200 mV to set the 100% limiter threshold with VR7.

The reason for the increase in audio drive is to test that the modulation limiter (and mike AGC in this particular radio) is doing its job. Think about it, if the modulation limiter is working and doing its job, then you can increase the mike level all you want (until you fry something) and the AMC will clamp it to the level that makes 100% modulation. The only parts in the audio chain that would be stressed are the passive components before the AMC audio shunt regulator, which is TR18.

There is very little you could tell me about that radio (or more specifically that chassis) that I don't already know. That UPD-858 PLL chassis is my all time favorite. But be careful with the UPC-1156 audio amp chip. They're discontinued and no longer generally available. That tantalum capacitor that I mentioned before, that had a habit of shorting, is C179 on this rig, and it's a 2.2uF.

Also, depending on how old that rig is, there was a factory mod that needs to be performed. On the oldest versions of that chassis, the RF final transistor had a habit of blowing, especially when a lot of SSB activity occurred. The problem was that the bias was being applied too strongly and the transistor would avalanche. The mod involved removing D66 and D67, and changing the values of R205 and R206 to 10 Ohms. Using the bias pots VR15 (driver) and VR16 (final) set the bias voltage for 40ma (driver) and 15ma (final). Newer versions of the radio already had the mod done at the factory.

That rig also mods very well, and will operate on most of the 10 meter band, (if you want to convert it) without the need to change any crystals. The PLL is capable of running (with the proper VCO adjustment) up to close to 30 Mhz. The PLL programmable divider is controlled by a 3 digit BCD "word", and capable of valid combinations ranging from 000 to 399. If you want to broadband the transmitter, you can do so quite simply by cutting the center tap circuit trace on both sides of L37 (a double can) and moving the trace to the empty outside legs on each respective side of the can. After realignment, the rig will now hold power for about a 2 Mhz wide band segment.

Clarifier range can be extended by jumping out R116. The pot can be re centered again by changing the value of R117.

I also found the transmit audio to be a bit mushy and compressed. The main reason for that is an audio bandpass filter installed between TR 20 and TR22. Removal and jumping out of L11, L10, and removing C's 71,72,73,74,& 75, yields a much better sounding audio fidelity. Or you can custom tailor the parts to suit your individual taste.

>Now you claim to have worked on CBs for 30 years, yet you have never
>seen a procedure as I just described (on what was once a fairly common
>and popular radio)?

I have seen similar procedures, but they were not used in the way you
interpreted it. I told you why they increase the level, and that's to
verify proper AMC action.

>>Often the only reason given in the procedures to increase the audio
>>input (And I have a nice Tektronix generator) is to verify proper
>>operation of the modulation limiter.

>I can send a pair of reading glasses with that book if you want.

Your failure to properly identify the true reason why the audio level
is increased, is not suggestive of my poor eyesight.

>>> One of the purposes of the
>>>test is to see if any stages lock up, a problem that is much more

>>
>>Most CB radios made in the 1960- 1980 time frame do not use Op-amps.
>
>
>.....uh, yeah. That's perfectly consistent with what I said. What's
>your point?

That audio lockups, like what you've described, would be rare on most
CB radios.

>>Some Uniden radios used them more recently, but not as audio amps.
>>They were used as AGC amps and T/R switching.

>Most OP-amps in modern radios (CB and other) are integrated into
>special-purpose chips. Some older radios had OP-amps made with
>discrete components.

There are very few CB radios that use "special purpose chips" other
than the PLL. Most parts are standard off-the-shelf components. It's a
blessing for techs. Most CB radios could be fixed with Radio Shack
parts. At one time, Radio Shack actually carried RF final amps
(2SC-1307). It's a shame that they have scaled back their parts so
much.

>>I have never seen an audio stage on a CB radio "lock up". The Hy-Gain
>>623 used to have an interestingly annoying "design flaw" where if the
>>modulator was driven too hard, it would shut down for a few seconds.
>>You would loose receive audio until it recovered.
>
>
>That sounds like a lock-up to me.

It was a design flaw (or "feature" depending on your perspective).

>>>Resonance is also an issue that needs to be appreciated. As you noted
>>>before, components change value over time. So a circuit that was not
>>>resonant at the time of manufacture may be resonant 20 years later.
>>>It's not a common cause of failure but I have seen it a few times.
>>

>was absolutely impossible.

Nothing is impossible in electronics. I had an open resistor once,
which had no signs of burning or overheating.

> But I show it off to visitors who stop by
>and don't believe me, have them measure it for themselves, and they
>walk away with a paranoid glaze over their eyes.

Oh, I believe you. I think I remember once seeing a resistor which
became a near dead short. It really messed up the bias of the circuit
it was installed in.

> to help. The problem is the abuse, not the programs.

Agreed. every time you start to investigate abuse of these programs,
"activist" jump & down about the poor being singled out. You'll never see
these programs shut down, to many people that are getting rich off them,
will complain to the activist and they in-turn will protest and get a hold
of the media and start their little show of "they are trying to persecute us
because we are poor".

"God Is With Us": Rhetoric and the Lure of "Moral Values"
by Maureen Farrell

"God does not make cowardly nations free." -- Adolf Hitler, Mein Kampf

A couple weeks ago, while asserting that the Founding Founders intended for the U.S. government to be infused with Christianity, Supreme Court Justice Antonin Scalia said that the Holocaust was able to flourish in Germany because of Europe's secular ways. "Did it turn out that, by reason of the separation of church and state, the Jews were safer in Europe than they were in the United States of America?",
Scalia asked a congregation at Manhattan's Shearith Israel synagogue.
"I don't think so."
One might expect regular citizens to be ignorant of history, but a Supreme Court Justice? Does he imagine that the phrase "Gott mit Uns" was a German clothier's interpretation of "Got Milk"?

If photographic evidence of the Third Reich's Christian leanings were not enough, Hitler's own speeches and writings prove, at the very least, that he presented many of the same faith-based arguments heard in America today. Religion in the schools? Hitler was for it. Intellectuals who practiced "anti-Christian, smug individualism"? According to Hitler, their days were numbered. Divine Providence's role in shaping Germany's ultimate victory? Who could argue? In other words, there is enough historical evidence to color Scalia deluded. Writing for Free Inquiry, John Patrick Michael Murphy explained:
"Hitler's Germany amalgamated state with church. Soldiers of the vermacht wore belt buckles inscribed with the following: "Gott mit uns" (God is with us). His troops were often sprinkled with holy water by the priests. It was a real Christian country whose citizens were indoctrinated by both state and church and blindly followed all authority figures, political and ecclesiastical.

Hitler, like some of the today's politicians and preachers, politicized "family values." He liked corporeal punishment in home and school. Jesus prayers became mandatory in all schools under his administration. While abortion was illegal in pre-Hitler Germany, he took it to new depths of enforcement, requiring all doctors to report to the government the circumstances of all miscarriages. He openly despised homosexuality and criminalized it."

For anyone wanting even more proof, Mein Kampf is chock full of the Fuhrer's musings on God. ("I believe that I am acting in accordance with the will of the Almighty Creator: by defending myself against the Jew, I am fighting for the work of the Lord," Hitler wrote). But anti-Semitic rants aside, some of Hitler's religious musings are interchangeable with

Mr. Bush's.

Hitler was raised a Catholic and spoke of his faith in God, yet, singling out his rants against religion, politicians and pastors continue to characterize him as a pagan barbarian. Such distortions are convenient -- particularly in an age where propaganda concerning "moral values" is readily gobbled up and Christian nation legislation waits in the wings -- but, to paraphrase the Bible, overlooking the truth will not make us free.

Scalia, who also cited the Bible to claim that government "derives its moral authority from God," is hardly alone in his assertions. Leo Strauss, the philosopher who has influenced neoconservativism, and by proxy, George Bush's America, felt that religion, like deception, was crucial to maintaining social order. Meanwhile, neoconservative kingpin Irving Kristol has argued similar points -- bragging about how easy it is to fool the public into accepting the government's actions while arguing that America's Founding Fathers were wrong to insist on the separation of church and state. Why? According to Jim Lobe, it's because religion, as Strauss and his disciples see it, is "absolutely essential in order to impose moral law on the masses who otherwise would be out of control."

Saying that neoconservatives believe that secular society is undesirable "because it leads to individualism, liberalism, and relativism, precisely those traits that may promote dissent that in turn could dangerously weaken society's ability to cope with external threats," Lobe explained why Kristol and other neocons have "allied themselves with the Christian Right" and, in some cases, have also denounced Darwin's theory of evolution. "Neoconservatives are pro-religion even though they themselves may not be believers," Reason magazine's Ronald Bailey explained, pointing to publications like Commentary which has espoused the virtues of religious fundamentalism and has questioned evolutionary science.

(Hitler did the same. The book The German Churches Under Hitler includes his assertion that secular schools should not be tolerated while Hitler's Table Talk quotes him questioning the wisdom in teaching children both creationism and the theory of evolution. "The present system of teaching in schools permits the following absurdity: at 10 a.m. the pupils attend a lesson in the catechism, at which the creation of the world is presented to them in accordance with the teachings of the Bible; and at 11 a.m. they attend a lesson in natural science, at which they are taught the theory of evolution,"he said. "Yet the two doctrines are in complete contradiction. As a child, I suffered from this contradiction, and ran my head against a wall.")

Professor Shadia B. Drury also noted the similarities between the methods endorsed by Hitler and neoconservatives' favorite philosopher. She explained:
"Strauss loved America enough to try to save her from the errors and terrors of Europe. He was convinced that the liberal democracy of the

Weimar Republic led to the rise of the Nazis. That is a debatable matter. But Strauss did not openly debate this issue or provide arguments for his position in his writings. I am inclined to think that it is Strauss's ideas, and not liberal ideas, that invite the kinds of abuses he wished to avoid. It behooves us to remember that Hitler had the utmost contempt for parliamentary democracy. He was impatient with debate and dispute, on the grounds that they were a waste of time for the great genius who knew instinctively the right choices and policies that the people need. Hitler had a profound contempt for the masses - the same contempt that is readily observed in Strauss and his cohorts. But when force of circumstances made it necessary to appeal to the masses, Hitler advocated lies, myths, and illusions as necessary pabulum to placate the people and make them comply with the will of the Fuhrer.

Strauss's political philosophy advocates the same solution to the problem of the recalcitrant masses. Anyone who wants to avoid the horrors of the Nazi past is well advised not to accept Strauss's version of ancient wisdom uncritically. But this is exactly what Strauss encouraged his students to do."

Although several others, including the legendary Seymour Hersh, have noted the neoconservatives' belief that deception is essential, the religious aspect of their philosophy is especially unnerving. Religion may be the opium of the masses, but when zealots become so certain of their own righteousness that they ignore their own humanity, horror is the natural consequence.

Islamic extremism offers the most glaring recent example, and now that Osama bin Laden has been granted permission to nuke America, the most extreme changes within the U.S. could very well come from the outside world.

In the meantime, however, for those who have not yet noticed, our own homegrown zealots -- those who advocate hatred in the name of the Lord -- have made considerable headway, with gays and lesbians currently at the center of legislation which, should it pass, will alter this country forever.

When the Marriage Protection Act passed the House in July, the New York Times called it "a radical assault on the Constitution. "If it passes in the Senate, the bill could obliterate the separation of powers and wipe out

Constitutional protections for all minorities, stripping the courts and possibly paving the way for Christian nationhood. Other pieces of court stripping legislation bills designed to topple the wall between church and state are also in play.

This encroaching infusion of church and state, combined with recent decrees concerning moral values, doesn't resonate with inclusive tolerance.

"When was the last time a Western nation had a leader so obsessed with God and claiming God was on our side? If you answered Adolph Hitler and Nazi Germany, you're correct," Bob Fitrakis wrote. "Nothing can be more misleading than to categorize Hitler as a barbaric pagan or Godless totalitarian, like Stalin."

While many of us reserve a soft spot for true Christian generosity and the warm teachings of Jesus, it's important to remember that Christianity can be (and has been) distorted for darker purposes. Whether you're talking about Nazi Germany, the pre-Civil War American South, or the atmosphere in the U.S. these past few years, whenever questions of conscience are vigorously denounced, you can bet there is trouble ahead -- and the hijacking of faith and the manipulation of religion should always arouse suspicion. Moral values as a mandate? What better way to foster civil obedience and "One nation Under God" unity in a time of preventative war, suppressed liberty and sanctioned torture.

So, yes, despite tales of Hitler's atheism and Germany's Godlessness, the list of Hitler's religious assertions and Nazi Christian affiliations is long, and before Americans swallow more WMD-type baloney, it's best to comprehend this history and understand that no nation, including our own, is immune to faith-based fascism.

Substituting "America" for "Germany," many of Hitler's religious assertions could have been uttered by Jerry Falwell or Pat Robertson -- with Hitler even asserting that God punished Germany for turning away from Him -- before promising that renewed piety would protect the Fatherland and make it prosperous and successful once more. "Once the mercy of God shown upon us, but we were not worthy of His mercy. Providence withdrew its protection and our people fell, fell as scarcely any other people heretofore. In this deep misery we again learned to pray," Hitler said in 1936, sixty-five years before Falwell and Robertson blamed abortionists and feminists for the tragedies of Sept. 11.

Hitler's religious phrases could have also come from the lips of George W. Bush. "Our prayer is: Lord God, let us never hesitate, let us never play the coward, let us never forget the duty which we have taken upon us,"Hitler said in March, 1933, sounding much like our president, who believes that God wants him to liberate the people in Middle East -- even if he has to torture, maim and kill tens of thousands in the process. "I believe we have a duty to free people," Bush told Bob Woodward. "I would hope we wouldn't have to do it militarily, but we have a duty.. . . Going into this period, I was praying for strength to do the Lord's will. . . ."

Speaking in Berlin in March, 1936, Hitler said something remarkably similar. "I would like to thank Providence and the Almighty for choosing me of all people to be allowed to wage this battle for Germany," he said, before launching the preventive war heard round the world. Both leaders also promised peace while planning for war. "We seek peace. We strive for peace. And sometimes peace must be defended," Bush said, in his State of the Union address in Jan. 2003, two months before

launching a preventative war in Iraq. "Never in these long years have we offered any other prayer but this: Lord, grant to our people peace at home, and grant and preserve to them peace from the foreign foe!"Hitler said in Nuremberg on Sept. 13, 1936.

Yes, many of Hitler's faith-based comments could have come from George Bush himself, and are undoubtedly the kinds of sentiments many Americans not only agree with -- but take comfort in. This is not to say that Bush is Hitler or that religion is evil, but to serve as a reminder that things are not always what they seem.

Christianity was used to justify everything from the Salem witch trials to slavery in America, and facilitated group-think in Germany -- when individuality and questions of conscience were needed the most. These are but a few of the Fuhrer's assertions:
"Secular schools can never be tolerated because such a school has no religious instruction and a general moral instruction without a religious foundation is built on air; consequently, all character training and religion must be derived from faith." (The German Churches Under Hitler, p.241)

"We must turn all the sentiments of the Volk, all its thinking, acting, even its beliefs, away from the anti-Christian, smug individualism of the past, from the egotism and stupid Phariseeism of personal arrogance, and we must educate the youth in particular in the spirit of those of Christ's words that we must interpret anew: love one another; be considerate of your fellow man; remember that each one of you is not alone a creature of God, but that you are all brothers! This youth will, with loathing and contempt, abandon those hypocrites who have Christ on their lips but the devil in their hearts." (Hitler: Memoirs of a Confidant, page 140)

"It will be the Government's care to maintain honest cooperation between Church and State; the struggle against materialistic views and for a real national community is just as much in the interest of the German nation as in that of the welfare of our Christian faith." (At the Reichstag, March 23, 1933)

"Without pledging ourselves to any particular Confession [Protestantism or Catholicism], we have restored to faith its prerequisites because we were convinced that the people need and require this faith. We have therefore undertaken the fight against the atheistic movement, and that not merely with a few theoretical declarations: we have stamped it out." (Berlin, Oct. 24, 1933)

"But there is something else I believe, and that is that there is a God. . . And this God again has blessed our efforts during the past 13 years." (Munich, Feb. 24, 1940)

"You [blue-collar workers] represent the most noble of slogans known to us: "God helps those who help themselves!' (Hitler: Speeches and Proclamations, Vol. 2, page 1147)

"Fifteen years ago I had nothing save my faith and my will. Today the Movement is Germany, today this Movement has won the German nation and formed the Reich. Would that have been possible without the blessing of the Almighty? Or do they who ruined Germany wish to maintain that they have had God's blessing? What we are we are, not against but with the will of Providence. And so long as we are loyal, honest, and ready to fight, so long as we believe in our great work and do not capitulate, we shall also in the future have the blessing of Providence." (Rosenheim, Aug. 11, 1935)

"My feelings as a Christian points me to my Lord and Savior as a fighter. . . As a Christian I have no duty to allow myself to be cheated, but I have the duty to be a fighter for truth and justice.... And if there is anything which could demonstrate that we are acting rightly it is the distress that daily grows. For as a Christian I have also a duty to my own people." (Munich, April 12, 1922)

"If positive Christianity means love of one's neighbor, i.e. the tending of the sick, the clothing of the poor, the feeding of the hungry, the giving of drink to those who are thirsty, then it is we who are the more positive Christians. For in these spheres the community of the people of National Socialist Germany has accomplished a prodigious work." (Feb. 24, 1939)

"We were convinced that the people needs and requires this faith. We have therefore undertaken the fight against the atheistic movement, and that not merely with a few theoretical declarations: we have stamped it out." (Berlin, Oct. 24, 1933)

"An educated man retains the sense of the mysteries of nature and bows before the unknowable. An educated man, on the other hand, runs the risk of going over to atheism (which is a return to the state of the animal)." (Hitler's Table Talk, 1941-1944, page 59)

In his book, They Thought They Were Free, Milton Mayer interviewed Germans who discussed how their society changed right before their eyes, and how, despite Hitler's rhetoric, God was nowhere to be found. As one interviewee put it:
"The world you live in -- "your nation, your people" -- is not the world you were in at all. The forms are all there, all untouched, all reassuring, the houses, the shops, the jobs, the mealtimes, the visits, the concerts, the cinema, the holidays. But the spirit, which you never noticed because you made the lifelong mistake of identifying it with the forms, is changed. Now you live in a world of hate and fear, and the people who hate and fear do not even know it themselves; when everyone is transformed, no one is transformed. Now you live in a system which rules without responsibility even to God. The system itself could not have intended this in the beginning, but in order to sustain itself it was compelled to go all the way."

Of course, America has hardly "gone all the way" and is unlikely to become as psychotic as Nazi Germany any time soon. But what do you suppose God thinks of preventative war based upon deception? Or about

the use of depleted uranium? Or about dropping napalm on civilians? Are Iraqi insurgents are any less certain that God is on their side than our own Evangelical Marines?

Yes, Saddam Hussein was a brutal thug, but why do so many insist on forgetting that the U.S. helped him to power in the first place? Does God see our role in all of this as lightly as we do? And how many U.S. citizens do you know, who, mired in fear, readily dismiss America's use of torture and rationalize our disregard for international law? What else might they overlook?

In 1937, Hitler said that because of Germany's belief in God and God's favoritism towards Germany, the country would prevail and prosper. "We, therefore, go our way into the future with the deepest belief in God. Would all we have achieved been possible had Providence not helped us? I know that the fruits of human labor are hard-won and transitory if they are not blessed by the Omnipotent. Work such as ours which has received the blessings of the Omnipotent can never again be undone by mere mortals,"he said.

While attempting to solidify his power, Hitler also denounced those who denounced religion -- as if he were talking about Hollywood or blue states or Noam Chomsky. "For eight months we have been conducting a fearless campaign against that Communism which is threatening our entire nation, our culture, our art, and our public morals, "Hitler said in a speech in Oct. 1933. "We have made an end of denials of the Deity and the crying down of religion."

THERE WILL BE NO MORE CRYING DOWN OF RELIGION IN GEORGE BUSH'S AMERICA, EITHER. THE OFT-REPEATED ASSERTIONS MADE BY THE MEDIA IN THE IMMEDIATE AFTERMATH OF THE ELECTION HAVE PROVEN TO BE NOTHING MORE THAN MYTH, PROPAGANDISTS WOULD HAVE YOU BELIEVE THAT THE AMERICAN PEOPLE HAVE SPOKEN:
'MORAL VALUES' REIN SUPREME.

But how can any one of us know God's desires -- especially when our enemies claim to have God on their side as well? And doesn't it seem that religious hubris -- believing that God sanctions one's own inhumane treatment of others -- always invites a fall?

"I tremble for my country when I reflect that God is just; that his justice cannot sleep forever,"

Thomas Jefferson said, of the price America would eventually pay for slavery. "Nations, like individuals, are punished for their transgressions," Ulysses S. Grant advised, describing karmic retribution without pointing hateful fingers at lesbians.

And long before that, the poet John Milton tried to "justify the ways of God to Man." But yet, the world, with its conflicting visions of morality, ethics and truth, still struggles to comprehend.
Perhaps Truth, for want of a better definition, is what God sees when he looks at any given situation. And perhaps it is ultimately impossible

for us to know God's mind. After all, it's obvious that Hitler wasn't telling the truth when he spoke of God and country -- and by the same token, it's difficult to look at Najaf or Fallujah or Abu Ghraib or Guantanamo Bay and see God's hand in any of it.

After one of Bush's operatives promised to "export death and violence to the four corners of the earth in defense of our great nation" Bob Woodward wrote: "The president was casting his mission and that of the country in the grand vision of God's Master Plan." And sure enough, when Woodward asked Bush if he had discussed the impending invasion of Iraq with his father, President George H.W. Bush (who could have offered sage advice), the President responded: "He is the wrong father to appeal to in terms of strength; there is a higher father that I appeal to."

But, without knowing God's mind, most of us have only History to help us judge. And the fact is, without the benefit of History, some of the "moral values" Hitler embraced sound eerily like those being peddled today.
George Bush is not Hitler. America is not Nazi Germany. But buying into religious assertions or thinking that God is on your side is not wise when it comes to matters of war -- particularly when that war is an aggressive preventative war based on false premises and assumptions.

So, aside from Jerry Falwell, who speaks with hate-filled authority, most of us do not know how God will judge us. We will have to settle for History's imperfect record.

All of this begs the question, however. Given his assertions regarding God's role in helping him decide policy ("I pray that I be as good a messenger of His will as possible" Bush told Woodward. . . "I felt so strongly that [invading Iraq] was the right thing to do") how does Bush view the more mundane, secular implications of his actions? When asked by Woodward how History would judge the war in Iraq, Bush replied: "History. We don't know. We'll all be dead."
I challenge anyone to find the moral value in that.

>>and therefore the more power it would take for a leak to heat that cap
>>to the point of exploding.
>
>Caps are rated by three things, capacitance, voltage rating and
>temperature.

Capacitors are rated by more than those three things: Variation in capacitance with frequency and temperature; hysteresis; inductance & complex impedance; etc.... and AC resistance, also dependent upon temperature and frequency, and which is critical in power circuits due to the usually dismal power dissipation capabilities of capacitors.

> In most sweep tube amps and tube CB radios, I rarely see
>more than about 40 uF in filter caps. Voltage rating depends on the
>circuit. Most amps use 450V caps in series.

I have a cap handy that's rated 40 uF @ 440 VAC. It must weigh at least five pounds and measures 10" x 4" x 2" (want a pic?). It's big because it's designed to handle lots of AC. I also have another capacitor handy that's rated 40 uF @ 450 VDC. It's barely 2" long and 1" diameter. It can't handle much AC at all. I have seen the caps used in sweep tube amps and they aren't designed to handle much AC at all. Load them down with some ripple and **poof**.

>>>> In fact, your
>>>>leaky cap draws so much -additional- power that it evaporates the

>>>the number of D&A Mavericks and Thunderbolt 305's and such that I've
>>>replaced blown caps in, and not had any other fault.
>>
>>
>>Did you ever think that maybe the cap wasn't large enough for the
>>application?
>
>Perhaps. Then I guess the manufacturer has some 'splainin to do.

That happens more times than I would like. GE and Motorola usually
have well-engineered products; Alvin Amps and Back-Room Communications
usually don't.

>>>>And like I said before, if the supply isn't fused then the failure is
>>>>probably going to be a shorted transformer or choke, blown rectifier,
>>>>or some other device that is less robust than the capacitor.
>>>
>>>Sometimes, if the cap hangs on long enough and the resistance drops
>>>further, the rectifiers blow too. But that's more rare.
>>
>>
>>It -is- rare because the caps usually fuse internally before anything
>>else goes.
>
>When you say "fuse" to you mean open or short?

Open. The wire fuses; i.e, melts. Internal wires in electrolytics are
usually quite thin, and the connections to the plates aren't always
secure either.

>>>>You might also realize that electrolytics blow up when subjected to a
>>>>reverse current -not- because of any heat buildup or dissipation, but
>>>>because the dielectric undergoes electrolysis and one of the products
>>>>is a gas.
>>>
>>>Yes, I am fully aware of that. When I was a young pup on my first full
>>>time job, I worked 2nd shift and the techs sometimes got bored when
>>>their work was done, so we used to make "capacitor cannons". We'd
>>>solder a set of leads to a radial lead cap (Usually 10 uF at 50V)
>>>place it in a hunk of PVC pipe, hook it up to a power supply
>>>backwards, aim it at our "enemy" and crank up the voltage. It made
>>>quite a projectile. I used to play with the voltage sometimes and I
>>>would often crank it up slowly just to see where the point of
>>>avalanche current draw first started.
>>>
>>>
>>>But I digress......
>>>
>>>Answer me this, how does a functioning DC power supply reverse current
>>>under typical operating conditions?
>>

>>
>>If the cap is subjected to reverse current then the operating
>>conditions are not typical, are they? But if you're asking how a low
>>voltage cap can be subjected to reverse current then there are a
>>myriad of possibilities, the most obvious and most common is that the
>>power supply was connected backwards.
>
>Are we now talking about solid state CB radios? That's a whole
>different set of circumstances from the tube amps and radios we were
>using as examples.
>
>> Also, electrolytics are not
>>always fixed at ground potential, such as when they are used as a DC
>>block in an audio line. If the offset fails, the cap pops.
>
>Absolutely! No argument there. But that's not what we were talking
>about before.

You must remain focused, Dave. We have been discussing several issues
regarding capacitor failure. In the present topic I had stated that
electrolytics fail most often due to excessive AC (or ripple) -or-
reverse voltage, at which point you queried as to how a power supply
can reverse it's current. I then explained that failure due to voltage
reversal is rare with high-voltage caps (in tube rigs) but went on to
explain how the failure is common in low-voltage caps (SS circuits).

Are you up to speed now?

>> There are
>>also instances where an abnormal AC component swings the normally
>>positive side of the cap negative. The cap voltage can get reversed by
>>rectification when a pull-up resistor fails. Etc, etc. Geez, Dave,
>>you've been doing this for 30 years and you didn't know this stuff?
>
>Not as applied to the tube amps we were talking about. If you switch
>the conditions of the discussion, then the outcomes will change as
>well.

Then why did you bring up the subject of tube amps when the original
topic was about a solid-state CB? If you don't want to discuss it then
don't bring it up.

>>>> This takes much less power than brute-force heating of a
>>>>cap. If a low-voltage electrolytic blows up, the reason is almost
>>>>always due to reverse current. High-voltage electrolytics don't blow
>>>>up nearly as often because they are rarely subjected to reverse
>>>>current.
>>>
>>>Which makes that an unlikely reason for cap failure.
>>
>>
>>It means high-voltage electrolytics are less likely to fail than

>>low-voltage electrolytics. Nothing more.
>
>In my experience the opposite happens.

Perhaps that's because you work more with tubes while I work mostly
with solid-state equipment.

> You see, while a 5K leakage
>resistance is more than enough to draw 200 watts from an 800 V supply
>and heat up the cap until explosion, that same 5K Ohm leakage across
>20V (A typical unregulated voltage in a CB power supply) will only net
>about .08 watts. Hardly enough to heat the cap to explosion. So in
>this case, if a cap blows, it's normally the result of either too high
>a voltage (exceeds the cap's rating) or reverse voltage.

Caps (in general) usually short or fuse (or short -then- fuse) when
the working voltage is exceeded. Low-voltage electrolytics blow up
usually because of reverse voltage.

>>>>>Also, if you recall how the HV power supplies were designed in a
>>>>>typical sweep tube "CB" grade amplifier, the plate supply voltage was
>>>>>usually designed at about 800V give or take. The filter caps were
>>>>>usually (2) 40 uF, 450V caps wired in series across the DC output.
>>>>>Sometimes there will be (2) 100K or 1M ohm resistors in parallel with
>>>>>the filter caps as well. What happens is that one of the two caps
>>>>>becomes leaky. It starts to draw current, and it raises the voltage
>>>>>potential across the other cap, until it exceeds the voltage rating
>>>>>and it's usually THAT cap which explodes.
>>>>
>>>>
>>>>You're reaching, Dave.
>>>
>>>Not at all. This is what happened on at least 2 other amps that I
>>>worked on. One cap had exploded, and the other one was leaky (As
>>>measured with a simple VOM). I concluded, based on the evidence,
>>
>>
>>.....LOL!
>>
>>
>>> that
>>>the leaky cap had caused the other cap to blow. The first time this
>>>happened to me, I replaced the "exploded" cap only, and when I fired
>>>up the amp, a short time later, the new cap exploded as well. Only
>>>then did I learn to check the remaining caps for leakage. Once the
>>>leaky caps were replaced, there was no further problem.
>>
>>
>>I think you are making that up, Dave.
>
>Really? Based on what? Disbelief?

Based on the fact that I've never experienced what you described, and
don't see how it's even possible from what I -have- experienced. I
have never seen a high-voltage cap blow up because it was leaking, and
I have rarely seen the same blow up from excessive DC voltage. I
-have- seen them blow up from excessive AC voltage (ripple). Is it
possible that the cap which blew up was subjected to too much ripple
caused by leakage in the other cap?

>>>>If the voltage across the 'other' cap is
>>>>exceeded what usually happens is the dielectric will puncture (at the
>>>>dielectric's puncture voltage) and cause a brief short as the cap
>>>>discharges. If the first discharge doesn't pop the fuse, or fuse the
>>>>cap internally, it will continue to charge and discharge just like a
>>>>relaxation oscillator, shunting (not dissipating) huge amounts of
>>>>power until something else fails, which usually happens in less than a
>>>>couple seconds. That's why you sometimes hear a short 'whine' before
>>>>the radio goes dead and smoke billows from the transformer.
>>>
>>>That "whine" is usually from a 12V to HV multi vibrator which is
>>>forced to stop from excessive current draw. I've seen that on a couple
>>>of Lafayette HA-250's.
>>
>>
>>I have heard that "whine" from equipment that had no vibrator,
>>mechanical -or- solid-state. It comes from the cap. If you don't
>>believe me, do the following experiment: Take a good cap, put it in
>>series with a resistor of, say, 100 to 1k ohms, then slowly push the
>>voltage up above the rated voltage. I would suggest using a cap of
>>only 100-150 volts because some of them won't puncture until they get
>>up around 400-500 volts. Anyway, at some point you hear the capacitor
>>begin to whine, and if the whine doesn't stop right away the resistor
>>will commence smoking (unless your power supply blows first). Try it.
>>It's fun!
>
>That is something I've never heard. I've never heard a cap "whine". I
>have heard them "sizzle" right before they out gas.

Sizzle, whine, fizz, scream..... it doesn't always sound the same.

>>>>>> Usually it's the
>>>>>>fuse that goes first, and if there's no fuse then the transformer
>>>>>>overheats and shorts. Caps don't blow because of DC leakage. Caps -do-
>>>>>>blow when subjected to too much AC, and even a few volts of ripple can
>>>>>>be enough to pop a can on a tube rig.
>>>>>
>>>>>It's the filter cap's job to smooth out ripple. Of course they will be
>>>>>subjected to it. If what you say were true, then there would be caps
>>>>>popping like popcorn. Ripple is not A.C., as the polarity never
>>>>>reverses. it only "pulses" to some degree. The charge-discharge action
>>>>>of the filter caps is what smooths these pulses out.
>>>>
>>>>

>>>>Ripple is the AC component of a DC current.
>>>
>>>Not exactly true. It is the pulsating D.C. current component. There is
>>>no A.C. after a bridge rectifier.
>>
>>
>>Like I said, call it whatever you like.
>
>I like being accurate.

Ok then. Any voltage has a DC component and an AC component. Pure AC
has no DC component, and pure DC has no AC component. The term
"ripple" is literally defined as the AC component of a DC current,
usually from a power supply, and usually a harmonic of the input
power. The term "ripple" is old and has been replaced by "pard", which
includes all AC components (or fluctuations) including hum, noise and
spikes.

Is that accurate enough for you?

>>>> But call it whatever
>>>>tickles your fancy because the fact is that if a filter cap is doing
>>>>it's job of smoothing the ripple then it's not being subjected to very
>>>>much ripple!
>>>
>>>Exactly my point. What you've described is a classic chicken and egg
>>>scenario.
>>
>>
>>The rooster came first.
>
>That much is true.
>
>>
>>
>>> The cap can't be subjected to too much ripple if it's doing
>>>it's job. If there is ripple, then the cap is usually bad.
>>
>>
>>Not necessarily. A heavy load will increase the ripple.
>
>Yes it will, but it won't kill the cap. Caps are designed to handle
>ripple. That's their job.

SOME caps are designed to handle ripple. Power supply filter caps are
designed to REDUCE ripple; i.e, shut the AC component to ground. When
the load becomes large then so does the ripple, and if the cap has a
high AC resistance then it will get hot very quickly.

I have a book on power supply design that I could send with that logic
book.....

>>>> If there -is- much ripple then the cap isn't doing it's
>>>>job, the reason being either the cap is weak or the load is too big.
>>>
>>>Right! But if the voltage is normal, then you can assume the current
>>>draw is not excessive.
>>
>>
>>Again, not necessarily. The DC component may stay within norms but the
>>AC component (ripple) will increase under load. That's just a fact of
>>life. Haven't you ever studied the basics of power supplies?
>
>I could write a course on power supplies.

Just about everyone who has ever used a soldering iron thinks they can
write a course on power supplies.

>An unregulated power supply will decrease voltage as load increases.
>If the supply is at normal expected voltage, then the load is not
>excessive. A regulated supply is a different issue. The regulated
>output may remain at normal, while the unregulated "reserve" drops,
>along with a proportional increase in ripple.
>
>The reason ripple increases is due to the R/C time constant of the
>circuit. When the load increased, the apparent resistance across the
>cap drops and the discharge rate increases to the point that it looses
>the capacity to hold the supply up in between ripple pulses.

Nice textbook explanation. But the increased ripple can be caused by a
host of factors, not the least of which (and to the suprise of many,
the most common) is the AC resistance of the output capacitor, -not-
the R/C time constant of the cap with respect to the source and load
impedances (which, BTW, are in parallel). A different scenario happens
with high-voltage supplies because regulation is usually achieved with
a swinging (saturating) choke, which permits more ripple to pass under
increasing load in order to maintain the DC component.

So when is your book coming out?

>>>>Whatever the cause, the cap sees that ripple as AC current which
>>>>causes heat dissipation in the cap due mostly to hysteresis (high
>>>>hysteresis being a characteristic of electrolytic caps).
>>>
>>>Now it's my turn. I've never seen a cap blow from a supply being
>>>dragged down to the point of excessive ripple. Over voltage yes,
>>>reverse voltage yes, leaky cap yes. Too much ripple, no.
>>
>>
>>Yet you claim that you can definitively determine if a completely
>>destroyed capacitor blew up because it was leaking. So how do you do
>>that? Do you reconstruct the capacitor like the FAA reconstructs
>>planes? Because that's what -they- need to do in order to determine
>>the cause of failure when there's no other obvious cause. Maybe they
>>should just hire you and your crystal ball, huh?

>
>If a cap explodes due to an excessive load, then the evidence of the
>failure which cause that excessive load should be evident. If not then
>you can't conclude that the cap died due to ripple.

The cause of failure is not always evident in the equipment. Like when someone brings in an amp (audio, RF, whatever) that they overloaded, overdrove, hooked up wrong or whatever. The dope who blew up the amp usually isn't going to admit his mistake, he just wants to get it fixed and get the heck out of there so he can put the incident behind him. Happens all the time. But contrary to your self-admitted cynicism, some people ARE honest, and that's one way I can determine what's causing a specific type of failure. So there -is- evidence of the cause of the failure even though it may not be evident from an examination of the equipment.

>You are right, in a sense, that you can't always tell what DID cause
>the cap to blow, but you can determine what DID'NT cause it to fail.
>It then becomes a simple process of elimination.

The possibilities are limitless so any such conclusion would be based only on probability.

>It's like forensic science. We reconstruct an incident based on the
>evidence in the aftermath.

Dave, before you use the word "forensic" again, do yourself a favor and look it up in the dictionary.

>>>>You missed capacitor lab, didn't you? Excessive load will draw down
>>>>the DC voltage but -increase- the ripple.
>>>
>>>I've never seen a cap blow from ripple. Never.
>>
>>
>>You probably have but didn't know it. You can create and measure a
>>controlled failure with a couple good chokes for AC isolation, a
>>couple large motor-run capacitors for DC isolation, and an audio amp
>>to supply the AC. If you need a schematic just let me know.
>
>I don't understand the relationship of what you are trying to
>simulate. I'm talking about filter caps in a power supply now. I
>should be able to "simulate" this by simply placing a large load
>across the power supply enough to drop down the voltage and increase
>the ripple. If the rectifier or the transformer doesn't give up the
>ghost first,, then the cap should blow according to your theory.

The objective is to cause the cap to fail under controlled conditions, and hopefully -without- destroying anything else. But if you want to do it your way then feel free to do so.

>>>>>>But no lower either. They certainly fail more often than resistors.
>>>>>>

>>>>>>
>>>>>>Not when you realize that a light bulb is nothing more than a
>>>>>>resistor
>>>>>
>>>>>A light bulb is a resistor as a consequence of it's intended use. A
>>>>>part designed as a resistor rarely fails, unless too much current is
>>>>>drawn through it. In which case, the failure is quite obvious.
>>>>
>>>>
>>>>A light bulb is most certainly designed as a resistor. If it didn't
>>>>have resistance it wouldn't work.
>>>
>>>Yes resistance is necessary for it's function. But it's not the
>>>function of a light bulb to act as a resistor in a circuit. Light
>>>bulbs are far too fragile for that use.
>>
>>
>>Wanna bet? I use them all the time for dummy loads while messing with
>>my generator experiments.
>
>A GE #47 bulb is close to 50 Ohms at 4 watts of power. The impedance
>changes, of course, with more or less power.
>
>That said, they're still a fragile resistor.

That's probably why I use a bank of 100-250 watt bulbs because even my
smallest generator (1kW) would probably nuke a 47 in short order.

>> They also make great regulators because of
>>their non-linear characteristics.
>
> But they can't handle much current.

Tell that to my old Heathkit audio generator. And zeners can't handle
much current either, relatively speaking. Ever hear of a neat little
device called a 'power transistor'?

>> And for the same reason, miniature
>>light bulbs make pretty decent audio compressors.
>
>I prefer Op-Amps.

Yuk. Even a fast OP-amp like the OP-27 makes for a noisy compressor.
The sub-mini incandescents are clean to at least 5kHz. If you want
something better try discrete log amps or the mod-limit-demod method.
Or just go buy a DBX.

>> So you still say
>>that light bulbs aren't resistors? Hogwash. If it's useful as a
>>resistor then it's a resistor.
>
>I never said they weren't resistors, I said that they aren't practical

>resistors to substitute in most circuits. A light bulb's resistance
>isn't constant and changes with voltage. Not something you normally
>want.

A light bulb's resistance changes with temperature, but who said a
resistor -must- be linear? The textbooks?

>>>> A resistor necessarily dissipates
>>>>power, and in a light bulb that power is dissipated as light (and
>>>>heat). The only real question here is why household light bulbs fail
>>>>regularly while automotive light bulbs last for a much, much longer
>>>>time.
>>>
>>>Higher voltage, and a smaller ,thinner and more shock prone filament.
>>
>>
>>Tungsten, one of the strongest metals on the periodic chart, is "shock
>>prone"? And what difference does the voltage make? It's the current
>>that causes the filament to heat up. Which is true regardless of it's
>>thickness, too.
>
>Current is a function of voltage divided by resistance. A higher
>voltage bulb can make the same current with a higher resistance. They
>usually control this with the length and thickness of the filament.
>Shorter, thicker filaments are more durable. That's also why a 25 watt
>bulb normally lasts longer than a 100 watt bulb.

Not in my house. I replace 40 watt bulbs just as often as 60 watt and
100 watt bulbs. And again, the it's the temperature of the filament
that determines it's brightness, which is a direct consequence of its
current. IOW, the current density through a cross-section of filament
is the same regardless of it's thickness or length. And for the sake
of discussion, UV bulbs work at a higher temperature, and therefore
have a -higher- current density.

Care to give it another stab?

>>>>You said, "I'm assuming it's an old 23 channel classic.
>>>
>>>Yes, I was more or less asking for confirmation.
>>

>>>>is ignorance.
>>>
>>>Not at all. If I claim that there is a high probability of component
>>>"A" failing and you disagree. Then you are saying, in essence, that
>>>there is a very low probability that component "A" is the failure.
>>
>>
>>Wrong. Disagreement is -not- an assertion of the opposite.
>
>It is in this case.

Well, I'm pretty sure about this, Dave. After all, I was the first
person to ever ace the logic class (Phil 201) in college, which is
probably why they brought me in a year later to teach it for a quarter

while the doctor was out.

>>This is the
>>same fallacy you invoke in your political arguments: You label me as a
>>liberal because I do not agree with your admitted conservatism, which
>>is also wrong. For example, if you believe in God and I state that I'm
>>an athiest, that doesn't mean I hold satanic rituals in my basement
>>(or anywhere else).
>>
>>If you want to assert yourself as a person who can think logically
>>then you need to understand logical fallacies enough not to make them.
>
>I know what I need to know about logical fallacies. You have committed
>your share of them, coincidentally when you debate politics.

Feel free to point them out.

>>>If you consider component "A" to have a low probability of failure it
>>>stands to reason that you place a higher probability on another
>>>component failing.
>>
>>
>>Again wrong, and for the same reason.
>
>Then what are you saying?

You remind me of the sitcom boyfriends when they get dumped by their
girlfriends who scream something like, "I never want to see you again
for the rest of my life!", and the boyfriend responds with, "So what
are you saying?"

>>
>>>Inductive reasoning.
>>
>>
>>Before you make any more logical leaps, let me send you a good book on
>>the subject. I'll pay shipping.
>
>I don't need any more books.

Yes, you do. Actually, this book is an older (but better) version of
the Copi book I used for the logic class. I highly recommend it
because the scope is a little broader than most logic textbooks. Copi
addresses both logic and language as distinct but integrated concepts.

>>>More chest thumping? What you've done at HP has no bearing on what
>>>I've seen in 30+ years of CB radio repair.

Don't laugh -- when beer cans were made of other than aluminum, Hams
soldered them together to make a beer can vertical. TRUE

The beer cans had to be empty 24 hours prior to assembly as a drunk can't
solder very well (;-)
TONGUE IN CHEEK

>conflicted with your belief system; to wit:
>
>Fact: Bush was a drunk and was convicted for a DUI.

An incident which occurred many years ago before DUI was even
considered a major issue. It's little more than a speeding ticket in
the grand scheme of things when viewed in the perspective of the time
period.

>Fact: Bush was twice a failure in the oil business.

Fact: The sun rises each day. What relevance does it have though?

>Fact: Bush failed in his first and only run for congress.

Most politicians do. Again, relevance?

>Fact: Bush failed as a campaign manager.

So did Donna Brazille. Again, so what?

>Fact: Bush was accepted into the NG less than a day after he applied
>(and a related fact: nobody was accepted into the NG that fast during
>the Vietnam years unless someone was pulling some strings).

A speculative conclusion based on a fact. That Bush made it in a day
after he applied may be verifiable, but the reasons for it, are purely
speculative.

>Fact: Bush failed to show up for a physical required to maintain his
>flying status, and therefore could not have fulfilled his duties and
>responsibilities in the NG.

Fact: He received an honorable discharge, which means that he did
indeed fulfill his duties.

>Fact: Nobody (as in none, zero, zilch), not ONE person remembers Bush
>being at one of his assigned duty stations.

Fact: No one has made an issue of it, except those who seem to have
selective amnesia.

>Fact: Bush stated publically that a presidential campaign could be won
>with only the support of the conservative Christians.

Your paraphrasing has changed the meaning of what he said, to make it
sound like something different. You would do well to excerpt the exact

quote before you present it out of context.

>Fact: Bush admittedly "found God" shortly after making the above
>statement.......

Is that a bad thing?

>
>Shall I continue? Or do you need time to verify those facts first?

Most of those facts are irrelevant, others are distorted, and a few
are speculative conclusions. They are hardly anything worth basing any
policy on.

>
>
>>>> Before that we were on good terms. Now you

>David Berkowitz; either the dog spoke or he lied about it.

So?

>Carter; either there was a UFO or he lied about it.

So?

>
>Bush; either he "found God" or he lied about it.

And?

>Bush; either UBL is no longer a threat or he lied about it.

OBL is not really much of a threat in the grand scheme of things. His
role has been marginalized. His capture now would only serve as a big
PR stunt. The real enemies are still out there, and OBL is only one.

>Bush; either Iraq had WMDs or he lied about it.

They had them.

>
>Dave; either you violated federal laws with your illegal radio
>operation or you lied about it. So you are either a criminal or a
>liar. Which is it, Dave?

I was a criminal, when I ran illegal equipment. That is no longer
true.

>> Either way, he's a an opportunistic slimeball.
>
>
>And Bush is an angel, huh?

Hardly. But he's a better leader.

>
>
>>>But there are two parts to
>>>his testimony:
>>>
>>>1) that war crimes were committed in Vietnam, which has since been
>>>verified as factual.
>>
>>There are many statements from other servicemen that say pretty much
>>the opposite. While some atrocities may have occurred, they were in no
>>way condoned, endorsed, or pardoned by the command structure.

>magazine covers, covered extensively in the newspapers.....
>oh, but
>there's that liberal media bias again. Geez, Dave, they sure have a
>way of supressing the facts, don't they?

It's about time you started realizing that. The media is quite adept
at manipulating public perception. They're trying to do it again with
Iraq. The difference this time is that we have alternative news
sources that didn't exist at the time of Vietnam. We can communicate
directly with soldiers in Iraq. They can send us pictures of what's
going on. They can tell the whole truth, not just what the media
thinks will give them the biggest ratings or promote their agenda. We
also have blogs who are populated with people who are connected in
various useful ways, and who often have the inside track on many
events. It was the acts of one such blog which exposed "Rathergate"
for what it was. Had this not happened, we might have all fallen for
yet another attempt at perception manipulation.

>>And isn't it odd that Kerry, a swiftboat captain, saw more atrocities
>>in the 4 months that he was there, than other guys saw in 2 or more
>>full tours of duty?
>
>
>So how did you quantify that?

Statistical probability.

>>>2) that -he- committed war crimes in Vietnam, which has -not- been
>>>verified as factual. IOW, either he provided specific information
>>>regarding his conduct which the government chose not to verify, or his
>>>claims were nonspecific generalities which could not be verified.
>>>
>>>Assuming the former (that he made specific references to specific
>>>acts) then the question becomes one of why the crimes were not
>>>prosecuted. There were plenty of war crimes in Vietnam that -were-
>>>prosecuted, so war crimes were not always ignored. Nixon wanted him
>>>silenced, and it would have certainly been easy enough if he -was-
>>>prosecuted for war crimes, but that never happened.

>>
>>Which then lends credibility to the notion that HE LIED. Along with
>>the other stuff he did while a part of the VVAW.
>
>
>Again you mock logic by trying to invoke the opposite from a denial of
>the precedent.

There is no fallacy called denial of the precedent. It's called Denial
of the Antecedent. And in order to qualify as an DA fallacy there has
to be another possibility which could satisfy the conclusion. I see no
other conclusion. Either Kerry was testifying accurately as to his
role in committing atrocities, or he made the whole thing up. There is
no middle ground.

>It neither lends nor detracts from your assumption that
>he lied. It simply states that there is no proof to make any factual
>determination either way.

It's either the truth or a lie. Which is it? Criminal or liar?

>>>So the only issue left is one of perception. What one person perceives
>>>as a crime may only be an act of war in the mind of another (a problem
>>>that is still evident today but you refuse to admit). That seems to be
>>>the case, and therefore it doesn't matter what he said. The -fact- is
>>>that Kerry's acts were never addressed by the government as war crimes
>>>-regardless- of how Kerry perceived his own actions.

>I think that may be one source of your confusion. Back in Kerry's day
>a DD-214 was a "Report of Transfer or Discharge", Form 1 NOV 55. Just
>as stated in the title, the form was used for both transfers -and-
>discharges. Kerry's records show more than one DD-214 -not- because he
>received more than one discharge, but because a DD-214 was filed each
>time he transferred to a different duty station.

Yes, the DD-214 that was filed in 2001 was a correction which applied
to one of his medals.

>Now my own DD-214 has a different title, "Certificate of Release or
>Discharge from Active Duty", Form 1 JUL 79, which was a year -after-
>the end of Kerry's military service. Obviously the scope of the form
>has narrowed and is no longer used for transfers within active duty.

Riddle me this Batman, why did Kerry, who was done with active duty by
1971and became an active military war protester, take until 1978 to
receive a discharge? Could it have anything to do with President
Carter's pardoning of war protesters?

>Apparently, someone unfamiliar with the scope of the earlier form
>noticed that Kerry had several DD-214's and ASSUMED, based on the
>scope of the more current form, that either he was discharged more
>than once, his discharge was in error, the documents were forged, or
>some other sinister plot. A false assumption based on ignorance -- and
>it's ignorance because the facts are in the documents themselves and
>can be seen by anyone who is willing to look.

Yes, you are correct about someone mistaking multiple DD-214'a for his
actual discharge date. But the fact that the entire records have not
been released, and that still raises more questions.

>> but they only tell part of the story.
>
>

>period.

Let's put that on the back burner and let it simmer awhile.

>>Fact: Bush was twice a failure in the oil business.
>
>Fact: The sun rises each day. What relevance does it have though?

Because it's a FACT. Business failure demonstrates poor leadership and
administrative abilities. Would you hire a CEO that failed to the
point where his daddy had to bail him out financially -- twice? I can
understand if he failed once and learned from the experience, but
twice? You don't see how that's relevant? That's denial, Dave.

>>Fact: Bush failed in his first and only run for congress.
>
>Most politicians do. Again, relevance?
>
>>Fact: Bush failed as a campaign manager.
>
>So did Donna Brazille. Again, so what?

Both are FACTS showing a consistent string of failures. It's called a
"rap sheet".

>>Fact: Bush was accepted into the NG less than a day after he applied
>>(and a related fact: nobody was accepted into the NG that fast during
>>the Vietnam years unless someone was pulling some strings).
>
>A speculative conclusion based on a fact. That Bush made it in a day
>after he applied may be verifiable, but the reasons for it, are purely
>speculative.

Then feel free to provide the name of JUST ONE person (not Bush) who
got into the NG within a day of their application, during the Nam
years, who -didn't- have someone pulling the strings. What I stated is
common knowledge because rich-daddy-string-pulling happened too often
for there to have been any legitimate cases of next-day acceptance.

But like I said, if you can provide the name of one person who can disprove what is generally accepted as fact then I'll concede this issue.

Just one, Dave.

>>Fact: Bush failed to show up for a physical required to maintain his
>>flying status, and therefore could not have fulfilled his duties and
>>responsibilities in the NG.
>
>Fact: He received an honorable discharge, which means that he did
>indeed fulfill his duties.

We've been through this before, Dave. You can't say that about Bush while accusing Kerry's service as questionable. If you make the rule that an honorable discharge is prima-facie of honorable service then you must drop the Kerry accusations. Otherwise, you must accept the possibility that Bush was a skate. Yes, he -received- an honorable discharge, but the question is if he -earned- it. If you can admit that much then I can admit the same regarding Kerry's discharge.

>>Fact: Nobody (as in none, zero, zilch), not ONE person remembers Bush
>>being at one of his assigned duty stations.
>
>Fact: No one has made an issue of it, except those who seem to have
>selective amnesia.

That's not a fact, Dave. It may be your own perception, but it's not a fact. Far from it.

>>Fact: Bush stated publically that a presidential campaign could be won
>>with only the support of the conservative Christians.
>
>Your paraphrasing has changed the meaning of what he said, to make it
>sound like something different. You would do well to excerpt the exact
>quote before you present it out of context.

On the contrary, I was actually putting his statement in a better light than what I heard as I "read his lips" on the video clip used on the Frontline episode I referenced long ago. If you feel I misquoted him then by all means feel free to find his exact quote and correct me. I actually -encourage- you to do just that.

>>Fact: Bush admittedly "found God" shortly after making the above
>>statement.......
>
>Is that a bad thing?

Depends on the circumstances. If he did it in order to muster the conservative Christians for the Texas governorship then yes, it's a bad thing. All appearances suggest (yes, -suggest-) that's what he did. But the FACTS are as I stated them, and the timing is far more convincing as a circumstantial case against Bush than Kerry's

withholding of some of his military records from the public.

>>Shall I continue? Or do you need time to verify those facts first?
>
>Most of those facts are irrelevant, others are distorted, and a few
>are speculative conclusions. They are hardly anything worth basing any
>policy on.

They are irrelevant to you because -you- choose to dismiss them as unimportant. They are not distorted in any way. And there was only one conclusion that is generally considered to be common knowledge, which is far from being speculative. They are all premises that support a conclusion which becomes more and more obvious as more and more facts are presented. One by one your soldiers are going down, and pretty soon you will be left standing all by yourself holding the flag.

What spin? After he quit Harvard (or Yale, whichever party-house he was attending at the time) he was eligible for the draft, and more than likely would have been drafted just like every other able-bodied person of his age. Instead he applied for the Guard, and even though the process usually took several months before an acceptance (at least that's how long it took for every body else who applied and didn't have a rich daddy pulling strings), he was accepted within a day ....a SINGLE DAY! And you, who is willing to convict Kerry just because he doesn't release all his military records to the public, don't find that the least bit suspicious?

No, that's no spin, Dave. That's denial, and you need to get past it.

>>> Can you prove that he's a "criminal?

Listen to yourself -- you are willing to try and convict a Democrat on
your own accord, but you downplay the actual -criminal conviction- of
a Republican. And you tell me -I'm- being paritsan.....

You're a hoot, Dave.

>> (who, BTW, -wasn't- convicted). It is -you- that is grasping
>>at straws in the wake of indisputable proof.
>
>Proof of what?

Time to take the kettle off the burner.....

DUI is a crime. You can sugar-coat it by calling it a "summary
offense" if that helps the medicine go down, but it's still a crime.
He was convicted of that crime. That, by itself, and in the mind of
any reasonable person, is proof that Bush is a criminal. If you can't
accept it then the ONLY conclusion is that you are not a reasonable
person.

>OBL is not really much of a threat in the grand scheme of things.

He's on the top of the FBI's most wanted list. He's why we invaded
Afghanistan. He's the reason there are terror alerts, long lines at
the airports, and vacant real-estate in New York. Not even Clinton
said anything that even remotely suggested Bin Laden was "not really
much of a threat". Yet you, in your unerring wisdom, follow Bush's
lead in believing just the opposite. Time for you to wake up, Dave!

> His
>role has been marginalized. His capture now would only serve as a big
>PR stunt. The real enemies are still out there, and OBL is only one.

His capture or death would probably be the -worst- thing for the
security of the US because he would then be a martyr, and retaliation
would be coming at us from all sides. I'm betting that he probably
-has- been either killed or captured and the information is being
withheld just for that reason, which would explain Bush's apparent
ineptitude when he made that remark.

>>Bush; either Iraq had WMDs or he lied about it.
>
>They had them.

15 years ago, but not when Bush used it as the primary reason for the
invasion. The administration even admitted as much. But you can't, and
that's funny -- you can't even agree with your own party if it means
you must admit that you were wrong!

>>Dave; either you violated federal laws with your illegal radio
>>operation or you lied about it. So you are either a criminal or a
>>liar. Which is it, Dave?
>
>I was a criminal, when I ran illegal equipment. That is no longer

True. The only question is at who's bidding? A normal person would
think that since most major news media is owned by corporate giants
that they would be manipulating the news, but for some reason you

think the liberals are in control. Let me guess: You think the USPTO has a secret communist agenda and the Library of Congress is run by pornographers, right?

> They're trying to do it again with

Scroll through some of these stories:

http://www.defenselink.mil/releases/

Our kids are getting killed day after day, by "terrorists" that exist only as a result of the invasion. Why? Because Bush thought, contrary to UN weapons inspectors, and under caution from the CIA that the intelligence is weak, that there were WMDs in Iraq. Well, I'm really sorry if the nearly 1400 dead servicemen and women and their families -did- buy that story, but I don't. This whole Iraq war has been a hoax from the start, and anybody like me who can recognize a wooden nickel when someone tries to hand them one should have their head examined, including yourself. My shame is that I fell for Bush's horseshit, but never again, and I'm certainly not going to buy any of your lame-ass excuses. Tens of thousands of people are dead because of Bush, yet you defend him like he was your god. Well, if you believe in Bush that strongly then you send -your- kids to Iraq so the good one's don't have to die anymore.

You whine about how the press is manipulating the facts of the war, but you refuse to look at the blood and the corpses of our dead kids. Yeah, the press is manipulating the war alright -- that's why people aren't as pissed off as me, and ex-Marine who has watched his friends and fellow Marines die for nothing more than to boost the careers of some deadbeat politicans.

So who's in charge of the media, Dave? Republican-backed corporations that take the conservative hard-lines? or loud-mouthed Americans like me who usually get labeled as liberals?

>>>And isn't it odd that Kerry, a swiftboat captain, saw more atrocities

>no middle ground.

Time for school, Dave. "Denial of the antecedent" is not a logical
fallacy because it is nothing more than a challenge to the consequent
of a conditional proposition.

And you are right, there is no fallacy called "denial of the
precedent"; I was simply describing your variation on the use of a
fallacy specifically called 'ignoratio elenchi', which is a
misdirection of a conclusion in order to support a different
conclusion. Twisty is proficient with that one. You aren't.

>>It neither lends nor detracts from your assumption that
>>he lied. It simply states that there is no proof to make any factual
>>determination either way.
>
>It's either the truth or a lie. Which is it? Criminal or liar?

Is water black or white? You want an absolution for something that
lacks absolute proof. You want an absolute answer? Try this: DUI is a
crime. Bush committed a DUI. Therefore, Bush committed a crime. A
person who committed a crime is a criminal. Therefore, Bush is a
criminal. Now THAT'S absolute.

>>>>So the only issue left is one of perception. What one person perceives

>Is DUI considered a "criminal" offense at the time is was received?

More excuses. Next you'll be saying that Rumsfeld was on a goodwill
mission when he gave Saddam the germs for his bio-weapons.

>>>>Do you think Kerry's official military records are forgeries?
>>>
>>>No,
>>
>>
>>Very good. Now lets move closer to the source of your confusion. Shark
>>said to you in another post, "...a DD214 is a DD214, no matter how you
>>try to dissect it Dave, so if it says Kerry was discharged, he was
>>discharged."
>>
>>I think that may be one source of your confusion. Back in Kerry's day

>>a DD-214 was a "Report of Transfer or Discharge", Form 1 NOV 55. Just
>>as stated in the title, the form was used for both transfers -and-
>>discharges. Kerry's records show more than one DD-214 -not- because he
>>received more than one discharge, but because a DD-214 was filed each
>>time he transferred to a different duty station.
>
>Yes, the DD-214 that was filed in 2001 was a correction which applied
>to one of his medals.
>
>>Now my own DD-214 has a different title, "Certificate of Release or
>>Discharge from Active Duty", Form 1 JUL 79, which was a year -after-
>>the end of Kerry's military service. Obviously the scope of the form
>>has narrowed and is no longer used for transfers within active duty.
>
>Riddle me this Batman, why did Kerry, who was done with active duty by
>1971and became an active military war protester, take until 1978 to
>receive a discharge? Could it have anything to do with President
>Carter's pardoning of war protesters?

It's called "inactive reserve" (aka, "standby reserve", "ready
reserve"), as I explained in a previous post. I did the same thing: I
was discharged from active duty in 1985 and was on inactive reserve
for two more years. The length of his inactive status evidently lasted
until 1978, which isn't unusual for an officer. Also, if you look up
the referenced authority for his discharge you will see that it has
nothing to do with the pardoning of war protesters; it's just the
standard operating procedural rules for the military.

All this information is, and always has been, available for you to
check out on your own. Instead, YOU chose to follow the ignorant herd
and believe the propoganda you were told instead of verifying the
facts for yourself.

>>Apparently, someone unfamiliar with the scope of the earlier form
>>noticed that Kerry had several DD-214's and ASSUMED, based on the
>>scope of the more current form, that either he was discharged more
>>than once, his discharge was in error, the documents were forged, or
>>some other sinister plot. A false assumption based on ignorance -- and
>>it's ignorance because the facts are in the documents themselves and
>>can be seen by anyone who is willing to look.
>
>Yes, you are correct about someone mistaking multiple DD-214'a for his
>actual discharge date. But the fact that the entire records have not
>been released, and that still raises more questions.

What questions, Dave? My military records are not available to the
public, so does that imply I'm some sort of communist rebel? So Kerry
was running for president. Well, his records (including the ones not
released) are all under control of the Pentagon, and Rumsfeld is in
control of the Pentagon. Not only that, but anyone who is elected to
be president (or any other government office) -must- meet certain

legal qualifications. This includes a check of any and all record
available to see if there is anything that will disqualify him from
the job. So even if there -is- anything worthy of your concern it
certainly wasn't a concern of Rumsfeld, the CIA, the FBI, and every
other service that would need to perform the necessary verifications
(not to mention the security investigations -- even the president is
subject to the need-to-know rule of secrecy).

IOW, your suspicions are totally unjustified. Stay focused on the
war-crime issue and maybe, someday, if you're lucky, someone might
come forward with hard evidence to support Kerry's own claims. Until
then you are wasting your time trying to find shapes in clouds.

>>> but they only tell part of the story.
>>
>>
>>By golly you're right..... his service number and SSN are blacked out
>>in all the documents. Why didn't he release that information? What
>>dark secret is he trying to hide? OMG, it's a liberal conspiracy!!!
>>ROTFLMMFAO!!!
>
>Those are not the only things that aren't there Frank.

Yada, yada, yada. Blah, blah, blah. You can't say what's in the box if
you don't know what's in the box. Unless you use your crystal ball.
What does your crystal ball tell you, Dave? What deep, dark, sinister
secret is Kerry hiding? Because if you don't know then stop with the
innuendos -- you are providing nothing by repeating over and over
about how "He's a bad guy because he's hiding something". Well so is
Cheney. Why aren't you whining about Cheney?

What a hypocrite you are, Dave.

>>>>>You discard what I provided because you refuse to acknowledge the
>>>>>possibility. You don't want to believe it so you deny it. You came up
>>>>>with some sort of "font analysis" on one document, and concluded that

>>

>>
>>Gee, why didn't CBS think of that!
>
>CBS wasn't looking as scanned documents on the internet. They were
>looking at photocopied paper documents.

The documents were spotted by the public as forgeries from scans
disclosed through the internet. What's your next excuse?

>>>> And the rest of the website was nothing more than
>>>>speculation without facts. Such as assumption of guilt in the absense
>>>>of evidence, and misinterpretation of official military records.
>>>
>>>Many murderers have been put in prison based on circumstantial
>>>evidence. When this much smoke is generated, there will be a fire
>>>somewhere.
>>
>>
>>Well, there were no WMDs in Iraq. What does that tell you about smoke
>>and fire?
>
>How do you know there are no WMD in Iraq?

Because I have a crystal ball just like you, Dave. And while you have
been busy sifting through Pentagon documents looking for dirt on Kerry
I have been busy paying attention to the foreign land on the other
side of the planet where Bush is sending our own kids to get killed
for oil and/or his own political hide.

>>>>> and I support those who best represent my
>>>>>political views.
>>>>>
>>>>>I also believe in the history and honor of our country, its military
>>>>
>>>>
>>>>Were you ever in the military, Dave?
>>>
>>>Irrelevant.
>>
>>
>>No military service and you can't even admit it.
>
>I can admit it just fine. But I see no relevance in it either way.

I can see that. If you -were- military you -would- see the relevance.

>>Were you a draft
>>dodger? No, I don't think you're that old.
>
>At least your math skills are working.
>
>> Were you kicked out?

>>Couldn't make it through boot camp? Or are you just ashamed that you
>>didn't serve when you had the chance?
>
>I was too busy getting an education and a good career. I had no need
>of the military to do that for me. There were also no wars to speak of
>then. I am now too old and way out of shape to even consider it. My
>asthma would probably reject me as 4F.

Yeah, I suppose it's easier just to pay someone else to risk their
lives for your freedoms. But that's right, you don't like taxes, do
you? In fact, you said that you prefer to keep what you earn. So how
are you contributing to this military that you claim to "believe in"?

>>>>>and the judgement of its leader in matters of national security and
>>>>>enemies of the state.
>>>>
>>>>

>>>
>>>And your point is? The judicial branch is responsible for interpreting
>>>the law.
>>
>>
>>Exactly. Interpretation of the law is not Bush's job.
>
>But enforcing it is.....

Wrong. That's the job of the Dept of Justice.

For all you vintage CB collectors (like Me)...

A brand new in the box never used still sealed in the original plastic bag 1975 Royce 1-612 23 channel mobile CB gets opened for the first time! It even smells new!

I left the pictures big, so you could see all the details! Modem users may have to wait awhile for all the pictures to load.

Enjoy!

http://www.shadowstorm.com/cb/NIB-Royce-1-612.html

I did not have the heart to take it out of the plastic after all these years. It is still sealed in the original plastic bag right now, and back in the box.

:)

What is Gyro lock? Does that mean you can get it at one of those Greek sandwich
stands? ;-)

That is cool, though.

Vinnie S.

Why is it that when one station gets to telling something, everyone else just
keys up and runs their mouth?
I ain't just talking 'bout channel 22 and 19 but some of these others that can hear
each other... but their radios don't.
And they have these Stupid Key-Downs ---- For what?
What is the point?
Why do you want to put x number of alternators on your vehicle only to get defeated in a Key-Down by another CB'er in front of all your friends and neighbors that you've gotten to know?

Why just have a good ol' Jamboree -- the way IT is meant for! Not to Fight and /or to Key Down, or have sex with the other CB'ers "better-halves".

But, to get together and Have FUN!
Talk to one another without pre-judgementation based on ones issues with the other person.
Help those who just want to have a good sounding station -- not all this echo/ "noise toys" and Linears ("Lean-years" as referred to by Cb'ers)

Here are a few things that I would like to see happen to CB :
*** A very polite disclaimer ***
These are just my sights based on my 25 years of being around radios.
I won't flame ya if ya don't have the same views. I'll just nod my head in acceptance of your input :)

- FM mode added to CB radios
- Scan mode
- At least 5 memories
- A mic cord that won't stiffen/ coil up in cold weather.
- Digital Modulation
- Scramble / Encryption
- PL / DCS sub-audible tones
- Tamper-proof chassis
- Modular connectors for mics/radios (i.e. the house telephone type connectors - no soldering required)

- Interoperability with MURS VHF and FRS (UHF) radios for added users.

- Digital Signal Processing on the receive.

- FCC issued CALLSIGNS

> sounds like ham and land-mobile type radios, huh ;)

You forgot this little part:
(16) "readily accessible to the general public" means, with respect to a
radio communication, that such communication is not--

(A) scrambled or encrypted;

(B) transmitted using modulation techniques whose essential parameters
have been withheld from the public with the intention of preserving the
privacy of such communication;

(C) carried on a subcarrier or other signal subsidiary to a radio
transmission;

(D) transmitted over a communication system provided by a common carrier,
unless the communication is a tone only paging system communication; or

(E) transmitted on frequencies allocated under part 25, subpart D, E, or F of part 74, or part 94 of the Rules of the Federal Communications Commission, unless, in the case of a communication transmitted on a frequency allocated under part 74 that is not exclusively allocated to broadcast auxiliary services, the communication is a two-way voice communication by radio;

Cell phones are protected. Part 15 common cordless phones are not.

>>>>>Do you think Kerry's official military records are forgeries?
>>>>
>>>>No,
>>>
>>>
>>>Very good. Now lets move closer to the source of your confusion. Shark
>>>said to you in another post, "...a DD214 is a DD214, no matter how you
>>>try to dissect it Dave, so if it says Kerry was discharged, he was
>>>discharged."
>>>
>>>I think that may be one source of your confusion. Back in Kerry's day
>>>a DD-214 was a "Report of Transfer or Discharge", Form 1 NOV 55. Just
>>>as stated in the title, the form was used for both transfers -and-
>>>discharges. Kerry's records show more than one DD-214 -not- because he
>>>received more than one discharge, but because a DD-214 was filed each
>>>time he transferred to a different duty station.

>>
>>Yes, the DD-214 that was filed in 2001 was a correction which applied
>>to one of his medals.
>>
>>>Now my own DD-214 has a different title, "Certificate of Release or
>>>Discharge from Active Duty", Form 1 JUL 79, which was a year -after-
>>>the end of Kerry's military service. Obviously the scope of the form
>>>has narrowed and is no longer used for transfers within active duty.
>>
>>Riddle me this Batman, why did Kerry, who was done with active duty by
>>1971and became an active military war protester, take until 1978 to
>>receive a discharge? Could it have anything to do with President
>>Carter's pardoning of war protesters?
>
>
> It's called "inactive reserve" (aka, "standby reserve", "ready
> reserve"), as I explained in a previous post. I did the same thing: I
> was discharged from active duty in 1985 and was on inactive reserve
> for two more years. The length of his inactive status evidently lasted
> until 1978, which isn't unusual for an officer. Also, if you look up
> the referenced authority for his discharge you will see that it has
> nothing to do with the pardoning of war protesters; it's just the
> standard operating procedural rules for the military.
>
> All this information is, and always has been, available for you to
> check out on your own. Instead, YOU chose to follow the ignorant herd
> and believe the propoganda you were told instead of verifying the
> facts for yourself.
>
>
>>>Apparently, someone unfamiliar with the scope of the earlier form
>>>noticed that Kerry had several DD-214's and ASSUMED, based on the
>>>scope of the more current form, that either he was discharged more
>>>than once, his discharge was in error, the documents were forged, or
>>>some other sinister plot. A false assumption based on ignorance -- and
>>>it's ignorance because the facts are in the documents themselves and
>>>can be seen by anyone who is willing to look.
>>
>>Yes, you are correct about someone mistaking multiple DD-214'a for his
>>actual discharge date. But the fact that the entire records have not
>>been released, and that still raises more questions.
>
>
> What questions, Dave? My military records are not available to the

It's an exception, moron. Can you not read English? My bad, silly question. Look, I'll explain it to you. There are cordless phones that us spread spectrum technology, there are others that can scramble. Those are included in your argument. Simple, FM, 900Mhz phones are not. And no matter what, if they are part 15 devices, they ARE fair game. Didn't you get a bad enough taste of crow on your last crusade? You know, the one about roger beeps?

To make it easier in case I ever run other cable if I go to ham. If this was a
one-time thing, I wouldn't run it.

That would be a joy. But I think certain folks enjoy this gay talk. I
mean would it really be that bad to return to cb talk illegal or not?

Make Tons Of Money Fast!
I was browsing through newsgroups, just like you are, and came across an article similar to this that said you could make thousands of dollars within weeks with an initial investment of $6.00! I thought," Scam", but I was curious, so I kept reading. It said : send $1.00 to each of the 6 names and address stated in the article. Then place your name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch.
I was skeptical and worried about the legal aspects of it all, but checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is legal! I invested the measly $6.00. GUESS WHAT!!... Within 7 days, I started getting money in the mail! I figured it would end soon, but the money kept coming in. My first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! Third week I had over $10,000.00. Fourth week and I've made a total of just over $42,000.00! How and why this works.. Make a copy of this NOW, so you can get information off of it as you need it.
1: Get 6 separate pieces of paper and write the following on each piece "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 6 envelopes and seal them. What you are doing is creating a service by this. Mail the 6 envelopes to :
#1) Gary Wilson 21 Weston St. Apt-315 GrandRapids, MI 49503
#2) Fred P.O. Box 25534 Yuma, AZ 85367
#3] Jason Calbourn 452 Kuhn Street Pontiac, MI. 48342
#4] Natalie Sanderson 114 Oak Hereford, TX 79045
#5] Demetria Garcia P.O. Box 421 Richgrove CA 93261
#6) Thomas Ledbetter 1401 E.Bristol St.Apt. A202 Phila Pa 19124
2: Take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (there are close to 24,000 groups) Just need 200, but remember, more posting, more money.

Geo, if you want to debate things with me, please don't post inflammatory
subject lines. We can debate, to no end, but if you continue to use
Dogie-style tactics, expect to shunned as such.

1908. THIS IS REALLY GREAT AND IT REALLY WORKS!

Make Tons Of Money Fast!
I was browsing through newsgroups, just like you are, and came across an article similar to this that said you could make thousands of dollars within weeks with an initial investment of $6.00! I thought," Scam", but I was curious, so I kept reading. It said : send $1.00 to each of the 6 names and address stated in the article. Then place your name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch.
I was skeptical and worried about the legal aspects of it all, but checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is legal! I invested the measly $6.00. GUESS WHAT!!... Within 7 days, I started getting money in the mail! I figured it would end soon, but the money kept coming in. My first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! Third week I had over $10,000.00. Fourth week and I've made a total of just over $42,000.00! How and why this works.. Make a copy of this NOW, so you can get information off of it as you need it.
1: Get 6 separate pieces of paper and write the following on each piece "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 6 envelopes and seal them. What you are doing is creating a service by this. Mail the 6 envelopes to :
#1) Gary Wilson 21 Weston St. Apt-315 GrandRapids, MI 49503
#2) Fred P.O. Box 25534 Yuma, AZ 85367
#3] Jason Calbourn 452 Kuhn Street Pontiac, MI. 48342
#4] Natalie Sanderson 114 Oak Hereford, TX 79045
#5] Demetria Garcia P.O. Box 421 Richgrove CA 93261
#6) Thomas Ledbetter 1401 E.Bristol St.Apt. A202 Phila Pa 19124
2: Take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (there are close to 24,000 groups) Just need 200, but remember, more posting, more money.

Hehehe. What a trip this newsgroup is.
No, I don't think I am going to change the minds of any of the
bigoted, racist, anti-Semites in here. Why would I think that?
I'm 60.
I have two and a third college degrees, including a B.A. from a
major state university, an M.A. from an Ivy League university,
and about a third of the credits necessary for a doctorate.
I see what is discussed in here. Fortunately, it is unlikely any
of the hatemongers in here are in a position to anything about
anything...and that's what motivates most of the hate posts.

- - -

Harry Krause wrote:
What do you suppose set the idjut off this time, Juan?

Try the following two sets of examples for starters.
First up is shitbird and how he revels in playing the victim
without acknowledging how he initiated his attacks at me a few
months ago, and how he was the one who spread his troll tally
lies and unfounded assumptions into a number of newsgroups. Then,
when I learn that he slandered me in newsgroups I have never
previously visited, and visit them to post rebuttals in defense
of myself, shitbird feels justified that I am the trolls (plural)
that he erroneously claimed I was from the start. His playing
victim charade just doesn't get it when I'm the person maligned
by his actions.

Notice in the first sample set that I confront shitbird in the
<alt.fan.jimmy-buffett> newsgroup (one of his favorites) upon
which he initiates irrelevant response messages into the
<alt.fan.frank-zappa> newsgroup (which was one of my favorites
until he muddied it up again for no reason). That type of
cross-newsgroup off-topic juvenile action is precisely how this
feud he started got spread to perhaps a half-dozen newsgroups

And through it all, as shown below, he thinks he can play the
part of the victim and try to deflect the blame onto me.
All I requested to make a truce work was for him to publicly
apologize to each of the newsgroups that he soiled by initiating
his ignorant tirades, but, he won't comply. He should atone for
all the damage he brought to the respective newsgroups but he
doesn't care about anyone but himself in his little drug-addled
fantasy world.
- - -
The second example set shows how hypocritical KKKrause is in
badgering people who hold pro-gun sentiments to which he posts
anti-gun lies and horseshit. During the same relative time frame,
he fervently attempts to circumvent gun law restrictions in his
state of residence to purchase a specific handgun of choice.
- - -
These two lying racist malcontents have caused so much turmoil in
every newsgroup that they post their blather into that if there
were a usenet tribunal to which they could be brought for the
sake of scrutiny, they both would be banished forever from
interacting in newsgroups so that peaceful well-meaning
participants may enjoy all that newsgroups have to offer.

The sooner these two self-serving miscreants treat other usenet participants
with respect, and stop posting their drivel meant to
purposely rile people up, each of the adversely affected
newsgroups will be much more pleasant to visit and spend some
time in.

At the risk of giving some of the trolls any fodder

What "trolls" would those be, PJ? I still haven't seen you
publicly apologize to the participants of this newsgroup for
spreading your self-centered, malicious, and totally unfounded
'troll tally' lies into this newsgroup.

After the way you repeatedly slandered me, all you have to do to
rectify what you have done to me and this particular newsgroup,
as I told you previously, is to publicly apologize for the way
you spoiled their appreciation of this forum.

You can't simply drop your slanderous lies and expect everything
to be back to the way it was before you spoiled everyone's fun;
you have to atone for your misdeeds.

As soon as you apologize publicly to this newsgroup, and refrain
from referring to your fictitious "trolls", this newsgroup can
begin to heal itself.

Let's see that apology here, PJ... the ball's in your court, as
you like to say.

Harry Krause wrote:
Some years ago, a comic suggested that everyone with a handgun,
everyone, be rounded up and shipped off to a huge, escape-proof,
fenced-in area in some mostly unpopulated area (Texas would
do), and given unlimited ammo, whiskey, and crank, and left to their own
devices.
After a month, the survivor could be rounded up and hanged.
The handguns left behind could be gathered, melted, and turned
into something useful, like underwired bras.

Seems perfectly reasonable to me...get rid of everyone who has
a handgun AND the handguns, and produce useful clothing.

Gee, it wasn't so awful long ago that you posted the usenet
message included below into a GUN NEWSGROUP. Looks like a fervent
plea needing an answer real quick. Why else would you go to such
great length to seek out answers to your personal HANDGUN dilemma of not
being able to purchase just exactly what want?

And what kind of ANTI-GUN NUT publicly, and therefore PROUDLY,
states that, "I have a closet full of
shotguns"????????????!!!!!!!!!!!!!!!!

With all your anti-gun posturing, I'm surprised you wouldn't want
the security - for yourself and anyone around you - of an
integrated trigger lock. After all, it's one step closer to
making a 'dangerous' firearm useless whenever it may be needed
most. That's what you and your anti-gun nut KKKlan wants most, to
keep the general populace from utilizing a firearm for personal protection.

How do you expect to survive in the 'Escape From New York'
environment you describe in the first quoted paragraph up above
with only a "Ruger New Model Single Six Hunter"? Any of the long
guns in that "closet full of shotguns" arsenal ain't gonna help
you past a few dozen yards. You'd be ventilated right quick
defending yourself with any of those scatter guns.
Bwahahahahaha!!!!!!!!!

Talk about a hypocritical sack of shit!! Two-faced KKKrause!!!!!!!!!

- - -
From: Harry Krause <piedtypec...@yahoo.com>
Newsgroups: rec.guns
Subject: ISO "legal" six shooter for Maryland...
Date: Tue, 11 Jan 2005 21:59:17 +0000 (UTC)
Message-ID: cs1i7lkuu1@grapevine.wam.umd.edu>
NNTP-Posting-Host: sniper.cs.umd.edu

I'm interested in buying my first handgun (I have a closet full of
shotguns), and what I want is a Ruger New Model Single Six
Hunter, model KNR7H, in stainless.

I want a new in the box pistola.

Problem is, I live in Maryland, and we have a state law that
makes legal purchase of this revolver a no-no, unless you
purchase one that was manufactured several years ago. Revolvers
manufacturer in, I believe, the last two years have to have an
integral lock on them. Ruger has not seen fit to re-engineer this
model to accommodate Maryalnd.

But it is legal, I understand, to buy a brand-new revolver if it was
manufactured prior to the "no lock, no sale" ban. What I would
have to do is find a a dealer either in Maryland or out of state and
arrange a legal sale. The out of state transaction would be
handled through a local holder of an FFL, I suppose.

Question is, how would I find out who has the model revolver I want?
Is there any sort of dealer cooperative where inventory lists are
available for perusal?

Thanks!

It doesn't need to be type accepted for use on amateur frequencies.
Convert it to CB and you would be breaking the law.

Damn. That is an ancient golden oldie.
I haven't seen a vertical meter in ages.
If I'm not mistaken, the "gyro-lock" referred to the style of the mounting
bracket.
Seems to me like the company was in business only a few years and went
under.

If you look around in some technical manuals, you'll need to understand the
wavelength formula to build it correctly.
There is a specific formula for determining how the elements are cut and
spaced.

If you've got a good ham shack around, go talk to them about it.
Or basically follow a 10 meter design. It's close, but it should work.

What you have is a basic yagi antenna.
http://www.signalengineering.com/ultimate/4_element_yagi.html

Scroll to the bottom of the page for details on lengths required.

Have fun.

>possibility that Bush was a skate. Yes, he -received- an honorable
>discharge, but the question is if he -earned- it. If you can admit
>that much then I can admit the same regarding Kerry's discharge.

There is always a question Frank. But since he was granted the
honorable discharge, the burden is on the accuser to prove that he
didn't "earn" it.

Kerry's discharge was honorable as well (eventually) The fact that he
received it many years after active duty, and coupled with his
anti-war activities (Including meeting with the Enemy in France)
raises suspicion of the circumstances of it. Again, the burden of
proof is on the accuser. But the suspicion is there nonetheless.

>>>Fact: Nobody (as in none, zero, zilch), not ONE person remembers Bush
>>>being at one of his assigned duty stations.
>>

>>Fact: No one has made an issue of it, except those who seem to have
>>selective amnesia.
>
>
>That's not a fact, Dave. It may be your own perception, but it's not a
>fact. Far from it.

Yes it is. The only people who claim to not have seen Bush are the
same people looking to damage him. Their agenda's are clearly
transparent. The people who did see Bush were ignored from the
"search", as it did not promote their agenda.

>>>Fact: Bush stated publically that a presidential campaign could be won
>>>with only the support of the conservative Christians.

>is far from being speculative. They are all premises that support a
>conclusion which becomes more and more obvious as more and more facts
>are presented. One by one your soldiers are going down, and pretty
>soon you will be left standing all by yourself holding the flag.

Not at all. And it'a moot point since Bush WAS reelected, and he can't
run again, so further smear is a waste of time.

>>>> Can you
>>>>prove that he dodged the draft?
>>>
>>>
>>>He wasn't drafted, was he? I would say he successfully dodged the
>>>draft.
>>

>person of his age. Instead he applied for the Guard, and even though
>the process usually took several months before an acceptance (at least
>that's how long it took for every body else who applied and didn't
>have a rich daddy pulling strings), he was accepted within a day ....a
>SINGLE DAY!

My wife's uncle, after realizing that he had a lottery number which
would have been called, rushed out and joined the National guard.
Happens all the time. I knew a few people who enlisted in services
which were "less risky" rather than getting drafted as a grunt in the
army. It's no big deal.

>And you, who is willing to convict Kerry just because he
>doesn't release all his military records to the public, don't find
>that the least bit suspicious?

There is way more than this to raise suspicions about Sorry. His
ant-war activities, his trashing of his fellow servicemen in 1971, the
un-sanctioned meetings with the Vietnamese, where he urged them to
"hang tough", as he assured them that home support for the war was

ebbing, his suspicious discharge date, and the fact that selected
(and I assume key) parts of his records have been deliberately not
released, is more than enough to cast doubt.

>
>No, that's no spin, Dave. That's denial, and you need to get past it.

As do you.

>>>> Can you prove that he's a "criminal?
>>>
>>>

>
>Listen to yourself -- you are willing to try and convict a Democrat on
>your own accord, but you downplay the actual -criminal conviction- of
>a Republican. And you tell me -I'm- being paritsan.....

The circumstances are a matter of record. What Ted Kennedy did (and
was never prosecuted for) shows just how much more serious a crime he
was guilty of, and released from due to the political influence of his
powerful family in the area. Nobody died when GWB was cited for DUI.

>
>You're a hoot, Dave.

Like I said, what you do for one, you do for all.

>>> (who, BTW, -wasn't- convicted). It is -you- that is grasping
>>>at straws in the wake of indisputable proof.
>>
>>Proof of what?

>said anything that even remotely suggested Bin Laden was "not really
>much of a threat". Yet you, in your unerring wisdom, follow Bush's
>lead in believing just the opposite. Time for you to wake up, Dave!

So you think that terrorism rises and falls on the breath of OBL? If
we capture or kill him, do you think it will all go away?

>> His
>>role has been marginalized. His capture now would only serve as a big
>>PR stunt. The real enemies are still out there, and OBL is only one.
>

>
>His capture or death would probably be the -worst- thing for the
>security of the US because he would then be a martyr, and retaliation
>would be coming at us from all sides. I'm betting that he probably
>-has- been either killed or captured and the information is being
>withheld just for that reason, which would explain Bush's apparent
>ineptitude when he made that remark.

I used to think the same thing. He had been conspicuously absent from
the scene after our attacks on Afghanistan, and the messages released
from Al Qaeda became audio only or made by another member of the
group. This led me to suspect that OBL was either dead or severely
wounded. Recently though, I have backed off from that thought, as new
tapes have been verified as authentic Bin Laden.

>>>Bush; either Iraq had WMDs or he lied about it.
>>
>>They had them.
>
>
>15 years ago, but not when Bush used it as the primary reason for the
>invasion.

You can't make that statement as a matter of fact.

>The administration even admitted as much. But you can't, and
>that's funny -- you can't even agree with your own party if it means
>you must admit that you were wrong!

No one in the party admitted any such thing. All they have done is
suspended the search for them. They're probably safe and sound in
Syria.

>>>Dave; either you violated federal laws with your illegal radio
>>>operation or you lied about it. So you are either a criminal or a
>>>liar. Which is it, Dave?
>>
>>I was a criminal, when I ran illegal equipment. That is no longer
>>true.
>
>
>So you're only a criminal -while- you are committing the crime? Ok, so
>if I hold up a Stop-n-Rob and they catch me the next day, I can plead
>innocent because they didn't catch me in the act?

If they can convict you of it based on evidence, then it goes on your
record. Otherwise, there's this little thing in the law called
innocent until proven guilty.

> Oh brother, -now- I
>know what's wrong with this country..... too many lame excuses!!!

And you've been making most of them.

>>>> Either way, he's a an opportunistic slimeball.

>think the liberals are in control.

Because they are(With a few notable exceptions). The liberal
journalists are the ones who were indoctrinated into this slant during
their college years and report the news with that slant. There have
been many books written on this exact subject. Maybe you should read
one. If, as you imply, the conservatives were in control, would they
be running story after story of negative press from Iraq? Wouldn't it
make more sense to downplay the loss of life stories and focus instead
on the positive actions? Your assertions do not fit the circumstances.

>
>> They're trying to do it again with
>>Iraq. The difference this time is that we have alternative news
>>sources that didn't exist at the time of Vietnam. We can communicate
>>directly with soldiers in Iraq. They can send us pictures of what's
>>going on. They can tell the whole truth, not just what the media
>>thinks will give them the biggest ratings or promote their agenda. We
>>also have blogs who are populated with people who are connected in
>>various useful ways, and who often have the inside track on many
>>events. It was the acts of one such blog which exposed "Rathergate"

>
>Our kids are getting killed day after day, by "terrorists" that exist
>only as a result of the invasion. Why? Because Bush thought, contrary
>to UN weapons inspectors, and under caution from the CIA that the
>intelligence is weak, that there were WMDs in Iraq.

That was not the only reason given.

>Well, I'm really
>sorry if the nearly 1400 dead servicemen and women and their families
>-did- buy that story, but I don't.

That's your flaw.

>This whole Iraq war has been a hoax
>from the start

Prove it.

>, and anybody like me who can recognize a wooden nickel
>when someone tries to hand them one should have their head examined,
>including yourself. My shame is that I fell for Bush's horseshit, but
>never again, and I'm certainly not going to buy any of your lame-ass
>excuses.

I'm sure you, like the rest of the democratic koolaid drinkers, would
feel much differently about the war and the continued loss of life,
had Kerry won, and continued the war.

> Tens of thousands of people are dead because of Bush, yet you
>defend him like he was your god.

No, those people are dead because of Islamic Fundamentalism, which is
a bigger threat to us than Communism ever was. Only you can't see it
yet.

>Well, if you believe in Bush that
>strongly then you send -your- kids to Iraq so the good one's don't
>have to die anymore.

That is such a party-line comment. I can just hear it oozing from
Teddy Kennedy's mouth.

>You whine about how the press is manipulating the facts of the war,
>but you refuse to look at the blood and the corpses of our dead kids.

War is hell. People die. Where were you when the many thousands of our
kids were dying in WWII? Oh that's right, you weren't alive then to
know what sacrifice for your country truly means.

>Yeah, the press is manipulating the war alright -- that's why people
>aren't as pissed off as me, and ex-Marine who has watched his friends
>and fellow Marines die for nothing more than to boost the careers of
>some deadbeat politicans.

Speculative conjecture based on little more than emotion.

>So who's in charge of the media, Dave? Republican-backed corporations
>that take the conservative hard-lines? or loud-mouthed Americans like
>me who usually get labeled as liberals?

With the exception of Fox, the major news media slants solidly left.
It doesn't matter who owns them. Just look at what they choose to
report and the context they paint it in.

>>>>And isn't it odd that Kerry, a swiftboat captain, saw more atrocities

>>Carter's pardoning of war protesters?
>
>
>It's called "inactive reserve" (aka, "standby reserve", "ready
>reserve"), as I explained in a previous post. I did the same thing: I
>was discharged from active duty in 1985 and was on inactive reserve
>for two more years. The length of his inactive status evidently lasted
>until 1978, which isn't unusual for an officer.

But a bit strange for a guy who sustained superficial wounds just to
get out of Vietnam, and then denounced both the war and the military.
Conspiring with the enemy while still on the military roles would be
considered treasonous. Yet, it was all made to go away when Carter
pardoned all the anti-war guys....

> Also, if you look up
>the referenced authority for his discharge you will see that it has
>nothing to do with the pardoning of war protesters; it's just the
>standard operating procedural rules for the military.

What, do you think it would say that right on the DD-214? A deal was
made. Just like the "deal" that got Bush into the NG in a day. That's
what happens in politics.

>All this information is, and always has been, available for you to
>check out on your own. Instead, YOU chose to follow the ignorant herd
>and believe the propoganda you were told instead of verifying the
>facts for yourself.

Because the "facts" are not always what you think they are. The paper
doesn't refuse ink, and just because something might be listed on a
DD-214, does not mean that other circumstances were considered or
ignored.

>>>Apparently, someone unfamiliar with the scope of the earlier form
>>>noticed that Kerry had several DD-214's and ASSUMED, based on the

>>>scope of the more current form, that either he was discharged more
>>>than once, his discharge was in error, the documents were forged, or

>>>it's ignorance because the facts are in the documents themselves and
>>>can be seen by anyone who is willing to look.
>>
>>Yes, you are correct about someone mistaking multiple DD-214'a for his
>>actual discharge date. But the fact that the entire records have not
>>been released, and that still raises more questions.
>
>
>What questions, Dave? My military records are not available to the
>public, so does that imply I'm some sort of communist rebel?

You aren't running for president.

>So Kerry
>was running for president. Well, his records (including the ones not
>released) are all under control of the Pentagon, and Rumsfeld is in
>control of the Pentagon.

Deflection. Kerry could have them all made available by filing a DoD
form 180.

> Not only that, but anyone who is elected to
>be president (or any other government office) -must- meet certain
>legal qualifications. This includes a check of any and all record
>available to see if there is anything that will disqualify him from
>the job. So even if there -is- anything worthy of your concern it
>certainly wasn't a concern of Rumsfeld, the CIA, the FBI, and every
>other service that would need to perform the necessary verifications
>(not to mention the security investigations -- even the president is
>subject to the need-to-know rule of secrecy).

So I guess Bush's DUI is a non-issue then.

>IOW, your suspicions are totally unjustified. Stay focused on the
>war-crime issue and maybe, someday, if you're lucky, someone might
>come forward with hard evidence to support Kerry's own claims.

Yea and someday pigs might fly.

> Until then you are wasting your time trying to find shapes in clouds.

There is a lot of information out there, much of which is cross
checkable. You may naively discard it as "propaganda" because you
don't want to consider the possible truth, but only an idiot stands
there with reams of information before him, and doesn't think that
some of it just might be true.

>>>> but they only tell part of the story.
>>>
>>>

>>>By golly you're right..... his service number and SSN are blacked out

>
>
>Yada, yada, yada. Blah, blah, blah. You can't say what's in the box if
>you don't know what's in the box.

And conversely, you can't claim that it's nothing either. Human nature
being what it is tends to follow that one doesn't hide something when
there's nothing damaging there. Disclosure puts all the cards on the
table.

> Unless you use your crystal ball.
>What does your crystal ball tell you, Dave?

It tells me you should change your socks.

> What deep, dark, sinister
>secret is Kerry hiding? Because if you don't know then stop with the
>innuendos -- you are providing nothing by repeating over and over
>about how "He's a bad guy because he's hiding something". Well so is
>Cheney. Why aren't you whining about Cheney?

Because Cheney wasn't parading around the stage of the democratic
convention pretending he was some sort of war hero. Kerry tried to run
on his past service in Vietnam. But someone should have told him that
he had too many skeletons in that closet, and those skeletons are what
cost him the election.

>
>What a hypocrite you are, Dave.

Me? Surely you jest.

And yours.

> But that's right, you don't like taxes, do
>you? In fact, you said that you prefer to keep what you earn. So how
>are you contributing to this military that you claim to "believe in"?

By paying taxes. If I had a choice I would want to pay far less. But I don't have that choice. But the military IS one of the things that I would pay for. Social welfare programs would be the first on my list to be cut.

Why would one assume that? Can you assume something else for once?

>But that's just a guess...

And a bad one. I don't see how intalling a plastic 8' conduit can be associated with power. Let me ask you a question.

If I run 9913 or LMR-400 inside a PVC conduit, increase my ability to run power? Is that type cable physically transformed into a high power cable, if I run it in a 1" pvc conduit?

Seriouly, if I were to go take a shit, someone on this group would associate it with me wanting running power.

FYI, I am going to run barefoot. By choice. By my choice. Not by choice and -pro or anti power people on this group. If you can't believe that, that is you problem. When I get setup, I will gladly pose pictures.

But I'd bet you were pissed. But how does one "lose" a job due to AA?
It isn't legal to lay off one person and hire another for the same
job.

> I had a pretty good resume and a fine recommendation. It
>wasn't long before I had another job. And it worked out for the best
>since the local HP plant turned sour a short time later. I have plenty
>of opportunities and I can afford to give up a few for a good cause.

It's not a good cause. It is building a bridge to make a career path
easier for some, while that bridge is built on the backs of more
deserving people, who are usually better qualified.

>>>So don't blame the government and don't blame people "of color". Blame

>>
>>Minority people share much of the responsibility for their own
>>situation. Many throw up their hands when things get tough and simply
>>blame it on the "white folks".
>
>
>You actually think that kind of projection is exclusive to minorities?

No, it is normally a symptom of people who live on the lower rungs of
the socio-economic scale. The problem is drawn across socio-economic
lines rather than racial ones. The difference is that an unmotivated
poor white guy is told "too bad", while an equally unmotivated poor

black guy is given special treatment under the perception that his predicament is not of his own doing, but rather the fault of perceived racial prejudice.

>Look in the mirror, Dave -- in many of your posts over the years you
>have clearly stated that you don't want to share the responsibilities
>of society, so you blame all the country's problems on the liberals.
>That's prejudice, Dave.

No that's called personal responsibility. I am responsible for MY contribution to society, no one else's. I don't want the government's help or hinderance in my pursuit of wealth and happiness. I don't believe that anyone should have it. You make your own life. If people are faced with a "do or die" scenario, there would be many less underachievers by necessity. And illegal immigrants would not be flocking here in as many droves if there were less "welfare" programs that pay them to do it.

>> While racism is still alive and well in
>>many places, it's a shadow of what it was 50 years ago.

>It's just hiding in the shadows.

No, it's really not as bad. I've seen a marked decline in the last 20 years. I used to hear people make racially insensitive comments all the time back then. I hardly hear it now. It also offends me more now.

>And in the airports since the Patriot
>Act went into effect. Racial profiling, despite Bush's excuse that it
>weeds out terrorists, is nothing more than racial discrimination based
>upon prejudice.

No, it is profiling based on statistical probability. How many terrorist acts have been carried out by 60 year old blonde females?

>BTW, ever hear of Mark Fuhrman? He lives in Idaho right across the
>state line from here, and just a few miles from where Richard Butler
>had his neo-Nazi compound which drew support from anonymous people all
>across the nation. But I suppose you're right, racism is pretty much
>dead, huh?

Oooohhh You found one example, so that must mean that racism is rampant through typical communities.

Yes, there are skin-head groups that preach white pride and make racially insensitive rhetoric. But they are a fringe and a minority group themselves.

>>> By cooperating with Affirmative Action you are
>>>shouldering the responsibilities that are shirked by racist employers,
>>>and for that you should be commended -- after all, nobody is forcing
>>>you to do business with Issaquah, are they?
>>

It'a amazing how many of these you can find. Yet I go to an occasional estate sale or garage sale, and have never seen even a broken CB.

Check this out:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48707&item=5747092908&rd=1&ssPageName=WDVW

Where do they find this shit? It's near mint. He might get $150 for this.

Oh, dear God, no! That's worse than the connector conspiracy[1] that we have now. Ask any computer network geek about broken RJ45s and trying to get those to stay in the wall. The stupid little plastic prong always breaks.

The mic on my radio burned out a few weeks ago out of nowhere, and Radio Shack has no replacement for the 5-pin DIN connector mike, which is ironic since they sell radios that require such a mike.

[1] http://ursine.ca/Connector_conspiracy The computer industry finally resolved the connector conspiracy with USB, it's time for radio to do something similar.

It's true that both sides have their respective agendas, but core conservative beliefs tend to lean toward those of personal responsibility, less government intrusion in our lives, and the maximization of capitalism. This is a great system for the Donald Trump types in the world with type "A" personalities, who are go-getters, and will make a buck any way they can. It's no so great for those who aren't motivated to do what needs to be done to get ahead in life.

Liberals are "the great protectors". They are the ones who want to use the government to do what individual charity already does, only extend it. The more you offer aid and comfort to people who are otherwise able bodied, the less incentive they have to work on their own. And the less they value what they achieve.

Heheh..Dave,. your linkage has slipped again. Here's a few more
N3CVJ-isms to keep you spinning and paying proper homage over the
weekend.
It's also of very interesting note you are the only one who hasn't been
forged in this group,,your timing of the forges and your "gay attacks"
on Frank and the group were not only coincidental, but impeccable.
Your voice is no longer one of integrity or even remote reason.
Off you go, now.

-
N3CVJ-isms:
"I really can't condemn illegal operation, since I've been involved in
it
as well. But I am really becoming disgusted with the degree and sheer
volume of operators that seemingly have the goods."

"Once one chooses to engage in the criminal mentality of breaking
federal law, they can no longer be trusted." N3CVJ

"I try not to come down hard on illegal radio operators, since I'd be
hypocritical in doing so" N3CVJ

"If the shoe fits..if you don't like being called a federal criminal
perhaps you should change your ways" (in regards to dx) N3CVJ

"I find it just a tad disgusting that poor,
unskilled, Hispanic people
can come to this country" N3CVJ

"I have ALWAYS used this account that you
see here." (voicenet) N3CVJ

"I've always accessed this group in the same manner" (supernews) N3CVJ

.....in addition to
Sprint (via Bedford County Computer Services in Roaring Sprig, Pa.),
Yipes! Qwest, usenetserver.com,ucis.vill.edu, cats.vill.edu, ptd.net

"Calls to the FCC fall on deaf ears, and I am into radio to enjoy
myself, not to create friction with various groups. Maybe my approach is
a bit of a cop-out, but personally, as long as they don't affect my
operation
then I have nothing to complain about. Life is too full of aggrevation
(sic) as it
is, I'm not going to look for it in my hobbies"
N3CVJ

"Perhaps not. But calls to the FCC are one way to fight back" N3CVJ

"Some of the excuses and reasons I've heard so far are feeble at best.
There is
really NO legitimate reason for ANY ham to need general coverage
transmit,
unless he planned on USING It" N3CVJ

"I can now access the worldlynx news server from other internet means."
(US West)
N3CVJ

"I have always had the ability to access the INTERNET through a T1
line, as well as my dialup account."
N3CV

"Canada must be a wonderful place. There the Cops are radio literate,
the
truckers are couteous, and intelligent, and people obey all facets of
the
law. And best of all, a 29 cent wire dipole will outperform a $100
"gain"
vertical. If it wasn't so dang cold, I'd love to move there ;)" N3CVJ

"I don't typically modify radios (unless they want to pay dearly for it)
N3CVJ

"I seem to find a disproportionate amount of females on ham radio.
That's why I like cb" N3CVJ

"I find truckers are the worst radio operators on the band" N3CVJ

"The biggest problem on CB today is ignorance" N3CVJ

"Roger beeps are illegal" N3CVJ

"You can't produce a rule saying they (roger beeps) are legal" N3CVJ

"You are a federal criminal. It (the dx rule) is federal law"
N3CVJ

"Most hams still respect the rules, and would
not be an accomplise (sic) to a criminal act"
N3CVJ

"My point is that hams are just as capable of being negligent of the
rules as CBers."
N3CVJ

>debate between creationism and evolution?

Why? That's an entirely different subject with limitless and
unverifiable possibilities. Unlike the subject we're currently
discussing. There are a finite amount of potential causes of cap
failure. Most of which can be reproduced.

> Or can you see that there
>are "other possibilities" that may not be obvious but they do exist?

Not in this particular case.

>Load them down with some ripple and **poof**.

But ripple is NOT A.C. It's pulsating D.C. At no point in the cycle
does the voltage polarity reverse (alternate).

>>>Did you ever think that maybe the cap wasn't large enough for the
>>>application?
>>
>>Perhaps. Then I guess the manufacturer has some 'splainin to do.
>
>
>That happens more times than I would like. GE and Motorola usually
>have well-engineered products; Alvin Amps and Back-Room Communications
>usually don't.

I usually like at least a 20% more capacity in a part than what the
circuit operates at. I'm a bit uncomfortable with a supply running at
850V with two 450V caps in series as filters. But It was very hard
back then to get caps with much higher ratings (that would still
physically fit).

>>> Also, electrolytics are not
>>>always fixed at ground potential, such as when they are used as a DC

>I have rarely seen the same blow up from excessive DC voltage. I
>-have- seen them blow up from excessive AC voltage (ripple). Is it
>possible that the cap which blew up was subjected to too much ripple
>caused by leakage in the other cap?

How? The ripple would still not be that great, and it would neither
exceed the voltage rating of th cap, nor reverse the polarity of it.

>>>>Not exactly true. It is the pulsating D.C. current component. There is
>>>>no A.C. after a bridge rectifier.
>>>
>>>
>>>Like I said, call it whatever you like.
>>
>>I like being accurate.

>Ok then. Any voltage has a DC component and an AC component.

>Pure AC has no DC component, and pure DC has no AC component.

Those two statements are contradictory.

>The term
>"ripple" is literally defined as the AC component of a DC current,
>usually from a power supply, and usually a harmonic of the input
>power.

No, ripple is the result of pulsating D.C. post the rectifier stage.
The frequency of the ripple depends on the type of rectifier and the
line frequency of the A.C. In the U.S., a half wave ripple frequency
is 60 hz. A full wave would be 120 hz.

>The term "ripple" is old and has been replaced by "pard", which
>includes all AC components (or fluctuations) including hum, noise and
>spikes.

That's because newer switching supplies create more noise, hash, and
spikes, then a simple linear supply would. Hence the need for a new
term, which encompasses a broader definition.

>Is that accurate enough for you?

I guess it'll do.

>>>> The cap can't be subjected to too much ripple if it's doing

>>ripple. That's their job.
>
>
>SOME caps are designed to handle ripple. Power supply filter caps are
>designed to REDUCE ripple; i.e, shut the AC component to ground.

No, they do not shunt A.C. to ground. The capacitor stores current
during the ripple peak, and then discharges it as the ripple falls.
The rate of charge/discharge (which is hopefully slower than 60 or 120
hz) is what "smooths" the ripple. When the load increases, the R/C
time constant of the circuit changes and the cap is forced to
discharge faster, which results in less filtering of the ripple and it
increases.

> When
>the load becomes large then so does the ripple, and if the cap has a
>high AC resistance then it will get hot very quickly.

How? There is no A.C.! Pulsating D.C. does not switch polarity.

>>>Again, not necessarily. The DC component may stay within norms but the
>>>AC component (ripple) will increase under load. That's just a fact of
>>>life. Haven't you ever studied the basics of power supplies?
>>

>Nice textbook explanation.

The truth usually is.

> But the increased ripple can be caused by a
>host of factors, not the least of which (and to the suprise of many,
>the most common) is the AC resistance of the output capacitor, -not-
>the R/C time constant of the cap with respect to the source and load
>impedances (which, BTW, are in parallel).

Of course the R/C is in parallel. The cap is across the load.

>A different scenario happens
>with high-voltage supplies because regulation is usually achieved with
>a swinging (saturating) choke, which permits more ripple to pass under
>increasing load in order to maintain the DC component.

That's a very poor regulator. The choke/cap is really just a low pass
filter, that designed to attenuate 60hz ripple.

>So when is your book coming out?

Since power supplies are so basic, and there is no new information
that I could tell that isn't already widely known, my effort would be
superfluous.

>>If a cap explodes due to an excessive load, then the evidence of the
>>failure which cause that excessive load should be evident. If not then
>>you can't conclude that the cap died due to ripple.
>
>
>The cause of failure is not always evident in the equipment.

No, it's not. But in a simple application of a HV power supply in a
tube amp, it's easy to eliminate practically every potential cause.

> Like when
>someone brings in an amp (audio, RF, whatever) that they overloaded,
>overdrove, hooked up wrong or whatever. The dope who blew up the amp
>usually isn't going to admit his mistake, he just wants to get it
>fixed and get the heck out of there so he can put the incident behind
>him.

Yes, but a good tech can usually tell what caused the problem.

> Happens all the time. But contrary to your self-admitted
>cynicism, some people ARE honest

Shame most of them aren't in politics.

>, and that's one way I can determine
>what's causing a specific type of failure. So there -is- evidence of
>the cause of the failure even though it may not be evident from an
>examination of the equipment.
>
>
>>You are right, in a sense, that you can't always tell what DID cause
>>the cap to blow, but you can determine what DID'NT cause it to fail.
>>It then becomes a simple process of elimination.
>
>
>The possibilities are limitless so any such conclusion would be based
>only on probability.

The possibilities are not limitless. There are a finite set of
conditions which a particular circuit can find itself in. Is it
probable that a 12V supply was exposed to 500V? Is it probable that a
rectified output of a supply reversed polarity? Absent of other
component failures, how many possibilities really exist?

>>It's like forensic science. We reconstruct an incident based on the
>>evidence in the aftermath.
>
>
>Dave, before you use the word "forensic" again, do yourself a favor
>and look it up in the dictionary.

Have you never heard of forensic criminalists, who gather evidence to
reconstruct a crime to prove innocence or guilt? Watch CSI sometime to
get familiar with them. Or, if you prefer a less dramatic example, the
Discovery channel has a show called "forensic files" which documents
actual criminal forensic cases. Court TV has similar shows.

The example I used was similar in method.

>>>>I've never seen a cap blow from ripple. Never.
>>>

>>>
>>>You probably have but didn't know it. You can create and measure a

I have a battery charger which is unfiltered (the battery acts as the
filter cap), which may serve the purpose nicely.

>>bulb normally lasts longer than a 100 watt bulb.
>
>
>Not in my house. I replace 40 watt bulbs just as often as 60 watt and
>100 watt bulbs.

Not me. I get almost twice the life from a 40 watt bulb than a 100
watt bulb.

>And again, the it's the temperature of the filament
>that determines it's brightness, which is a direct consequence of its
>current.

Right, and the resistance needs to be lowered for a brighter, higher
wattage bulb, given the same voltage. The temperature is higher, and
the MTBF is shorter.

> IOW, the current density through a cross-section of filament
>is the same regardless of it's thickness or length.

A 12V bulb will have a thicker filament than a 120V bulb for the same
given wattage. That's because the amount of current in a 12V bulb is
10 times higher than the same wattage bulb in a 120 V configuration.

>>>Age, yes, they do change to a greater or lesser degree. Usually

>>>>stands to reason that you place a higher probability on another
>>>>component failing.
>>>
>>>
>>>Again wrong, and for the same reason.
>>
>>Then what are you saying?
>
>
>You remind me of the sitcom boyfriends when they get dumped by their
>girlfriends who scream something like, "I never want to see you again
>for the rest of my life!", and the boyfriend responds with, "So what
>are you saying?"

Regardless of the other possibilities, if you disagree that a
particular component has a high probability of failure, then what you
are saying, in essence, is that you feel that it has a much lower
probability of failure Therefore, by extension, it can be assumed that
you then consider other components have a higher probability of
failure.

>>verify proper AMC action.
>
>
>I suppose that's why the manual says to overdrive the audio -before-
>setting the AMC, huh?

My manual says or implies nothing of the sort. It instructs you to set
VR6 with 5 mV for 50% modulation, and then set the generator to 200mV
and set 98% with VR7. It doesn't tell you to overdrive anything.
Nowhere does it call for raising it to 500mV as you initially claimed.

>>>>Often the only reason given in the procedures to increase the audio

Hello Steveo:

Yeah theres a bunch of real old farts in the Barstow Ca area that use these radios on ten meters. But because there are also big 20 meter ops, and may use more than the legal limit on 20, they slip off to the secret channel below 10 meters to discuss the tactics and such. Pretty funny!

I meet the old guys at a local restraunt on the outskirts of Barstow, pretty neat crowd. They all had the AR3500 radios, for both 10 and 11 meters.

These guys where good people, and always had a good time talking with other. A rough crowd at times but very entertaining. Especilly on 20 and 40 meters hehehhehehehe

Clean Telsat SSB-140 with stock mic, really fantastic receive and noise
blanker $100
Currently in service
Comstat 35 with stock mic $25.

The Comstat 35 has an audio squeel with the range boost on
(with *tuned* back of the set whip antenna)
Likely RF getting into the cheap HI-Z mic.
I also have a nice black D-104 with the preamp $50

Joe (Long Island)

Most are in bad-good condition. To get one in VG or near mint, would fetch upwards of $200. This guy having the box, will help.

Yes, it would. If, for no other reason, having two diametrically opposed political ideologies provides perspective. I doubt is there is a single person who is either 100% liberal or conservative. Most of us pick and choose certain parts of each "a la carte" to add to their own beliefs. The majority of those determines our overall slant.

Have you heard about this new hunting reality TV show that's seeking participants? It's called "Hunting for Bambi" and it's like Fear Factor meets Girls Gone Wild. 6 guys get to hunt 12 naked women in the woods with paintball guns. Sounds like it should be a new Olympic sport if you ask me! Definitely better than hunting deer. lol! Go to www.huntingforbambi.com if you're interested in signing up.

The PVC condiut is up. I ran a conduit so I can run the coax right to the basement, from the attic. I will make a run tomorrow to get coax and supplies. The Firestik arrived.

Also, I roughly measured the distance to the tree where I want to put a permanent antenna. The distance is huge, about 275 feet of total coax. I figured I can use LMR-400DB (direct burial). I estimate about 2 dB loss at that distance. How much power loss is that on a HR-2510, using a Imax-2000 with a GP kit, assuming a good SWR? I am not running power. Will that antenna offset that loss by itself?I really don't have a choice. It's not going on the house. Besides, the damn house is too low anyway. I can get way higher on the tree.

Vin:

Your loss will actually fall somewhere between 1.89 and 2dB.

2 db equates to roughly 23% power loss, assuming 1:1 SWR at the antenna. Since 1:1 isn't easily attained (you can't get it with a resonant dipole or a 1/4 wave whip without some sort of feed point matching, and then you lose some radiation efficiency), you can assume you're going to get some additional feed line (coax) losses (heating, mostly) because of the mismatch at the antenna. For that run I would highly suggest staying away from coax and see if you can find some 200 ohm twinlead. Output coax from the radio to the outside to a 4:1 balun to the twinlead to a 4:1 balun (in reverse), to about 20 feet of coax to the antenna. Losses will be MUCH lower than with coax.

The other option would be 450 ohm twinlead (ladderline) and a 9:1 balun at both ends. Ladderline is running about $0.19 +/- a foot, depending on where you're getting it. The cost for the baluns and the ladderline WILL be less than the run of LMR400.

The caveat here will be that you will need to keep the ladderline well away from ALL metal.. within about a foot of the ladderline.

For that long of a run, I would personally run a pair of 9:1 baluns and the 450 ohm ladderline. The cost and the losses will be lowest there.

The reason for the 25' of coax at the antenna end is to keep the ladderline from being unbalanced by the antenna.

Estimated losses for the 9:1's and 450 ohm... .6 db (and that's at the highest), depending on the quality of the baluns. Less than 5% power loss, and not quite so much effect due to poor SWR at the end.

Your dipole should see about a 1.3:1 - 1.5:1 SWR across the CB band. If it's possible to make a "V" antenna in the branches (inverted or not) the SWR could be lower, and you could definitely see some improvements over a vertical dipole.

You do know that filters work best when the target doesn't know what's filtered, right?

If I have the HR-2510 at 10 Watts DK, I am still putting out about 7.5 watts. If I turn up the DK to about 20 watts, I can still transmit about 15.5 watts. I guess that is not bad.

I guess the point is I can still get at least the power of a standard CB with an antenna directly overhead.

>The other option would be 450 ohm twinlead (ladderline) and a 9:1 balun

This will be a major problem. I have all my plumbing well within a foot, across the entire length of the house. All where I would bring the ladder line into the house. I cannot move the entry point without some serious digging and entering from the front of the house. There are numerous obstacles like the driveway and sidewalk. I will have to look into the 200 ohm twin lead.

>For that long of a run, I would personally run a pair of 9:1 baluns and

In the attic, I am using a 6 foot Firestik. It is the highest I can go up there. It is an electrical 5/8 wave, though physical 6 feet. I am using 8 pieces of 9 foot wires as a ground plane. Luckily, I have electricians in the family. This should work OK for now?

Lancer, does the term "electrical" not indicate the length of wire? He did not say physical.

Maybe the output of the radio is a reason? I have yet to see a CB with
balanced output.

Although cheap and nasty, the choke method works, without investing in the
cost of a tuner.

No, no...

You'd use coax to get out of the house, use the balun to switch to the
ladderline OUTSIDE the house, then switch back to coax thru the other
balun 20'-25' from the antenna.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

Here is my quote:

"It is an electrical 5/8 wave, though physical 6 feet."

Here is the Firestik website.

http://www.firestik.com/CatalogFrame.htm

3. Some "experts" may "claim" 5/8 wave mobile antennas are not possible because they would need to be 23 feet high. They are wrong! Physical length and ground wave performance are not the same. If you ever hear someone make that claim, ask them how a handheld CB can have a 1/4 wave antenna 8 inches long and mobile 1/4 wave antennas can be anywhere from 12-60 inches long in spite of the fact that a physical 1/4 wave is 108 inches.

hey not steve0.
good day to you
i ama NOTHING

I am not here to sell the farm
i am here to buy a farm.

put the fowl mouth on the end of a muffler
maybe a ford product

well this city needs 3 to 9 million people in less than 10 years
73 of 83 trades have already said so.

Th e mass migration will begin.

gold diamonds emeralds, oil , oil sands.
so i will get my place soon enugough

just suck my cock
oops gotta project i gotta do.

tool without a clue
good luck fella
tried to help
won't

>Vinnie S.

LOL! Looks like the same e-mail that firestick sent to me when I told
them they didn't have a 6 foot 5/8 wave antenna.

A 5/8 wave antenna a feedpoint impedance of about
150 - j600 ohms.

Now if you think that will match your CB, hey more power to you.
I have this bridge for sale... you know the rest...

You have a 6 foot antenna that is 1/4 wave electrical length..

They are good antennas, but they are not a 5/8 wave antenna...

1987. Re: Lardass' asskicking in person (NOW A MUSIC VIDEO !!!!)

I am not getting into a pissing contest with you. I am not an expert on antennas, hence I ask advice from people like Sideband, Chad, etc. People like you OTOH, seem to only one to do one thing. You like to one up somebody else. You offer no help. If you have a problem here, it's with Firestik, not me. I suggest you take it up with them.

>A 5/8 wave antenna a feedpoint impedance of about

SO what you are saying is their antennas do work on 27 MHz?

>You have a 6 foot antenna that is 1/4 wave electrical length..
>
>They are good antennas, but they are not a 5/8 wave antenna...

Um, I don't ever think I said that.

Hey, if you got advice, then give it, and I will appreciate it. If you want to mock me and flaunt your supposed knowledge, then go ahead. I could really give a shit if you are that petty. That is your problem.

Vinnie S.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

1999. What does a Palomar 300 Elite put out?

Newsgroup: rec.radio.cb
Date: 2005-01-30 16:06:24 UTC
From: TerraDactyl@shadowstorm.com
Message-ID: <41fd02e1.2619606@127.0.0.1>
Source record: 195637

For those that have one or have used one, what does a Palomar 300 Elite put out in honest RMS watts with a tone? There appears to be two versions of the amplifier . The version I am asking about is the one with two SD1446 transistors, and not the one with two MRF-455 transistors. I'm reluctant to believe anything a Dosey peak meter says.
I have been playing with one on the bench and the output is flakey. One moment the meter says 150 watts on sideband with a tone, and another minute is says about 80 watts with a tone. The broadband output transformer gets VERY hot on mine, and that is going in to a 1000 watt oil filled dummy load with 1.1 SWR. One of the legs on the 1000 pf capacitor soldered to the broadband output transformer did not appeared to be soldered well, so I re-soldered it. The amplifier is now showing about 80 watts consistently, and the output transformer is no longer getting so hot. I'm just wondering whether I fixed it or broke it. The two sd1446 transistors check good when I test them one leg at a time with a diode checker. I am using an average meter to measure the output.

>"starting a pissing contest"

Nope. I am curious as to why you find a "LOL" out of Firestik claiming that
their antennas are 5/8. That is what causes to to LOL? Your family get-togethers
must be a blast.

>>
>>>A 5/8 wave antenna a feedpoint impedance of about
>>>150 - j600 ohms.

>Geez, sorry Vinnie, I didn't mean to piss you off.

Don't flatter yourself. You will never piss me off.

>I wasn't mocking
>you.

Nope. You just find LOL humor in a Firestk claim. I think you mock yourself.

>I made a simple statement that a firestick is not an electrical
>5/8. Then instead of asking for an explanation, or why I said that.
>You take it personal, and go off the deep end.

Yeah, you made a simple statement where to LOL at an antenna claim, and then had
a bridge to sell me.

Why don't you just offer advice and be useful in society?

Vinnie S.

Unless it's a fixed, dedicated IP, that don't mean jack shit.
What if my cable company reassigns my IP?
Maybe I'm on dial up. In which case, the IP changes with each connection.
If you used 172.*.*.* then you'd block anyone from the entire IP range.
So bye bye aol users.
The IP block is meant to be used as a filter for domains, or robots.

That amp will put out around 250PEP. The output transformer was getting
hot because the output matching was poor. The cap you resoldered is
critical in the output matching network.

>
> They are good antennas, but they are not a 5/8 wave antenna...

That depends on where you place the loading coils, how many turns of X gage wire at Y pitch in Z linear space on a form of W diameter.

If there's 22.556 feet of wire on the 6 foot stick, then it's 5/8 wave, electrically, on 11M. How it's matched to the 50 ohm coax (not the radio) depends on where the turns are, etc, as stated above.

Oh, and a 1/4 wave antenna doesn't match to 50 ohms either... It's closer to 32 ohms (therefore the 1.5:1 match on a 1/4 whip).

FYI

2023. WANTED: Worthmore KW Switched Filter Section

Newsgroup: rec.radio.cb
Date: 2005-01-31 02:26:47 UTC
From: doc <kd4e@arrl.net>
Message-ID: <1107138407.671342.150920@c13g2000cwb.googlegroups.com>
Source record: 195661

I need the Switched Filter Section from a Worthmore KW amp.

If anyone has one that has been removed, preferably undamaged, I am
in need of the set of filters (mounted on the inside of the cover)
for a project.

Thanks! doc kd4e@arrl.net

2024. easy money?! please read!

Source record: 195662

ARE YOU IN NEED OF CASH? DON'T GO AND STEAL IT. TRY THIS. THIS REALLY CAN MAKE YOU EASY MONEY!! IT WORKS!!! BUT YOU HAVE TO FOLLOW THE LETTER FOR IT TO WORK!!!! THIS IS NOT A PYRAMID SCAM!! YOU TOO CAN BE RICH!!!!!

A little while back, I was browsing through newsgroup, just like you are now and came across an article similar to this that said you could make thousands dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah, right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to few people first, I thought about trying it. I figured what have I got to lose except 6 stamps and $6.00, right? Like most of us I was a little skeptical and a little worried about the legal aspects of it, so I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Then I invested the measly $6.00. Well GUESS WHAT? Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $30. By the end second week I had made a total over $425! In the third week I had over $1,500 and it's still growing. This is now my fourth week and I have made a total of just over $7,450 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works? Also, make sure you print a copy of this article NOW, so you can get the information off of it, as you need it.

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST", your name and mailing address, and your e-mail address, so I can send you an e-mail with all the newsgroup and newsletter that I posted with your information included. Once I have your name and mailing address, I will post your information to all newsgroup and newsletter all over the world. You have to do your part too of course. You will need to post the information in this letter including your information to at least 200 or more newsgroup or newsletter all over the world. If you do everything correctly, you will be rich in no time. GUARANTEED!!

Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope to prevent

thievery. Next, place one paper in each stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service by this.

THIS IS ABSOLUTELY LEGAL! Mail the 6 envelopes to the following addresses:

1. Ly Nguyen, 6933 Lewiston Way, #7, Sacramento, CA 95828

2. Hue Le, 581 Independence Drive, San Jose, CA 95111

3. Brandon Butler, 25 Clark Park Rd., Hooks, TX 75561

4. John Huynh, 491 Posada Way, #14, Chico, CA 95973

5. Cheran Shelton, 1184 Wilorraine Place, Rialto, CA 92376

6. John Green, 125 Virginia St, Brighton, IL 62012

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc) and add YOUR name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups, message board. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make!

DIRECTIONS HOW TO POST TO NEWSGROUPS, MESSAGE BOARD

You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) save your new notepad file as a .txt file. If you want to do your postings in different sittings, you'll always have this file to go back to.

Step 4: Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Just example you log on any search engine like Yahoo.com, google.com, altavista.com, excite.com then you search with this subject? Millionaire message board, money-making message board, employment message board, money-making discussions, money making forum, and business message board? Etc. You will find thousand & thousand message board. Click one by one then you will find the option post a new message.

Step 5: Visit these messages boards and post this article as a new message by highlighting the text of this letter and selecting paste

from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations? THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, and it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS OR MESSAGE BOARD YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200. That's it! You will begin receiving money from around the world within days! You may can rent a P.O. Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT. **

Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they only receive 5 replies, that just made me $3,125.00!!!

Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625.00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $6?? See if it really works?? I think so. PLAY FAIRLY AND HONESTLY AND THIS WILL WORK FOR YOU TOO. BEST WISHES TO YOUR FINANCIAL FUTURE.

If you are not serious about this Easy Making Money Strategy, please disregard this message. This Easy Making Money Strategy is primary for those who interested in changing their financial life style.

Remember to INCLUDE your e-mail address in the envelope, so I can e-mail you a confirmation letter with all the newsletter and newsgroup that I posted with your information on it. This is very important!! I'm an honest businessman, and I do what I said.

>electrically, on 11M. How it's matched to the 50 ohm coax (not the
>radio) depends on where the turns are, etc, as stated above.

No, its not an electrical 5/8 wave. A 5 foot antenna has about 8 ohms
-322j. Add a series inductor (firesticks 5/8 wave of wire) of 2 ohms
+322j. You now have a 10 ohm j0. You don't change the electrical
length, just cancel the reactance.

There little trick of adding more wire so that they may claim to have
a 5/8 wave antenna actually make the antenna less efficient.
They end up using more wire than a convential coil would use.
It does NOT make the element longer.
>
>Oh, and a 1/4 wave antenna doesn't match to 50 ohms either... It's
>closer to 32 ohms (therefore the 1.5:1 match on a 1/4 whip).

What do you call a decent match? 1.5 to 1 isn't?
A true 5/8 wave antenna will have an SWR of about 32 to 1.

2030. Re: I had a BALL at the bar today

Newsgroup: rec.radio.cb
Date: 2005-01-31 17:06:02 UTC
From: George Busch <WA3MOJ@aol.com>
Message-ID: <41fe657a@x-privat.org>
Source record: 195668
Cross-posted to: rec.radio.cb,alt.usenet.kooks,misc.transport.trucking

I just had sex with my cousin last night. However I did not know it was him until after he had climaxed.

I was at a local bookstore/video shop and had been cruising guys for awhile and had even sucked off a few other guys. I had just finished getting it on with a cute young Hispanic dude in one of the video booths and had walked out to the front of the bookstore when this white guy with a shaved head who looked to be in his late twenties or so walked in.

I wandered into the theatre that was showing a gay video and he came in from the back of the theatre and stood against the wall in the darkened theater. There were other guys sitting in the theater, so I exited and walked into the video booth area. I noticed that he was walking just a short distance behind me. So I went into the back hallway of booths and sat down in on with the door open. A minute later he walks by my booth and looks in and then passed and looked into the booth across the way from me. Then he turned back and looked at me again and I nodded for him to come into the dimly lit booth. He walked into the booth and closed the door behind him. I reached for his crotch and began to caress his package. He unbuttoned the top of his jeans and then I pulled down is zipper, out popped his rising cock. No words were exchanged.

I'm trying to document all the local commonly used channels on CB radio on my site to make it easier for people from different regions find people to talk or listen to when travelling. The channel plan as I understand it right now is posted at http://ursine.ca/CB and you can make your own changes to the chart by clicking the Edit tab at the top of the page.

Let me know what you think, feel free to make your own improvements to the page.

I took his rising cock into my left hand and brought my hungry lips to the tip of his cock. His cock slid down my hot throat and it quickly rose to its full length. I began by slowly savoring the feel of his 7" cock in my mouth and throat. Oh the joy of feeling that hardening cock in my mouth! I alternated between slowly sucking the tip of his cock to taking it all the way to the root and feeling it hit the back of my throat. His moans and whimpers of pleasure turned me on immensely. I kept sucking his cock and fondling his balls. Then I turned my attention to his suckable nut sac, taking turns with licking and sucking first one ball and then the other into my mouth, then taking both jewels into my mouth and humming on them.

2035. THOUSANDS THROUGH THE MAIL!!

Newsgroup: rec.radio.cb
Date: 2005-01-31 23:52:48 UTC
From: jared.frausto@gmail.com
Message-ID: <1107215568.919092.110640@f14g2000cwb.googlegroups.com>
Source record: 195673

Want to make some Money? Of Course!!

Basic Facts
A while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of CASH within weeks with only an initial investment of $6.00 plus stamps! So I thought, "Yeah, right, this must be a scam!" But like most of us I was curious and kept reading. It said that if you send $1.00 to each of the 6 names and addresses listed in the article, you could make thousands in a very short period of time. You then place your own name and address at the bottom of the list at #6, and post the article to at least 300 newsgroups. (There are about 32,000 of them out there and that's quite a large market pool). No catch, that was it. Even though the investment was a measly $6, I had three questions that needed to be answered before I could get involved in this sort of thing.

Pay Attention
1. IS THIS REALLY LEGAL?
I called a lawyer first. The lawyer was a little sceptical that I would actually make any CASH but he said it WAS LEGAL if I wanted to try it. I told him it sounded a lot like a chain letter but the details of the system (SEE BELOW) actually made it a legitimate legal business.

2. IS OK WITH THE POST OFFICE OR IS IT MAIL FRAUD?
I called them: 1_800_725_2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See 18, h sections1302 NS 1341 of Postal Lottery Laws). This clarifies the program of collecting names and addresses for a mailing list.

3. IS IT RIGHT?
Well, everyone who sends me a buck has a good chance of getting A LOT of CASH ... a much better chance than buying a lottery ticket!!!

So, having these questions answered, I invested EXACTLY $7.92 ... six $1.00 bills and six 32 cent postage stamps ... and boy am I glad I did!!! Within 7 days, I started getting CASH in the mail! I was shocked! I figured it would end soon and didn't give it another thought. But the CASH continued coming in. In my first week I made between $20 to $30. By the end of the
second week I had a made a total of $1,000.00. In the third week I had over $10,000.00 and it was still growing. This is now my fourth week and I have made a total of just over $42,000 and it's still coming in ..... It's certainly worth $6.00 and 6 stamps !!!

Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more CASH than you thought possible by doing something so easy!

Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the CASH come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a rip off; it is not indecent; it is not illegal; and it is virtually no risk it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the CASH made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1_800_725_2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

#1) Troy Crouse
385 Sunset Drive
Fredericton, NB
E3A 1J2, Canada

#2) J.E. Grey
245 Stone Bridge Ct.
Fredericton, NB
E3A 1J2, Canada

#3) R. Hanson
1214 Junor Ave.
Saskatoon, SK
S7L 7K1, Canada

#4) Leo Dapanas
PO Box 6453
Stockton, CA
95206

#5) Jeff Anderson
4833 N County Rd 11 C
Loveland, CO
80538

#6) Jared Frausto
113 Rheem Blvd.
Orinda, CA
94563

Are You Paying Attention? Good.
STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 300 newsgroups. (I think there are close to 32,000 groups) All you need is 300, but remember, the more you post, the more CASH you make! This is perfectly legal! If you have any doubts, refer to 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need CASH, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are a person of integrity, the program will continue and the CASH that so many others have received will come your way.
NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of CASH in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!

___DIRECTIONS _____ FOR HOW TO POST TO NEWSGROUPS

Step 1) You do not need to retype this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this letter, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on_line forums, message boards, chat sites, discussions.)

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE CASH YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 300

That's it! You will begin receiving CASH from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:
Out of 300 postings, say I receive only 7 replies (a very low example). So then I made $7.00 with my name at #6 on the letter. Now, each of the 7 persons who just sent me $1.00 make the MINIMUM 300 postings, each with my name at #5 and only 7 persons respond to each of the 7 original 7, that is another $49.00 for me, now those 49 each make 300 MINIMUM posts with my name at #4 and only 7 replies each, I will bring in an additional $343.00! Now, those 343 persons turn around and post the MINIMUM 300 with my name at #3 and only receive 7 replies each, I will make an additional $2401.00! OK, now here is the fun part, each of those 2401 persons post a MINIMUM 300 letters with my name at #2 and they each only receive 7 replies, that just made me $16,807.00!!! Those 16807 persons will all deliver this message to 300 newsgroups with my name at #1 and if still 7 persons per 300 Newsgroups react I will receive $117,649.00! With an original investment of only $6.00! And some stamps.

AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday? JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the CASH? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try?

Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.

Remember, play FAIRLY and HONESTLY and this will really work.

** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the CASH to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 6 $1.00 bills, people added him to their lists, and in 4_5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e_mail lists for future CASH.
Make sure you print this article out RIGHT NOW! Also, try to keep a list of everyone that sends you CASH and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the CASH!! GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH.

Please remember to declare your extra income. Thanks once again...

"People have asked me if this is really legal. Well, it is! You are using the Internet to advertise your business. What is that business? You are creating a mailing list of people who are interested in home based computer and online business and methods of generating income at home. Remember, people send you a small fee to be added to your mailing list. It is legal. What will you do with your list of thousands of names? That's up to you." So, build your mailing list, keep good accounts, declare the income and pay your taxes. By doing this you prove your business intentions. Keep an eye on the newsgroups and when the cash has stopped coming (that means your name is no longer on the list), you just take the latest posting at the newsgroups, send another $6.00 to the names stated on the list, make your corrections (put your name at #6) and start posting again.

NOTES:
*1. In some countries, the export of the country's exchange is illegal. But you can get the license to do this from the post office,

explaining the above statements (that you have an online business, etc. You may have to pay an extra tax, but that's OK, the amount of the incoming CASH is HUGE! And as I said, a few countries have that restriction .
*2. You may want to buy mailing and e_mail lists for future CASH. (Or Database or Spreadsheet software.)
*3. If you're really not sure or still think this can't be for real, please print a copy of this article and give it to someone who really needs the CASH, and see what happens.
*4. You will start getting responses within 1_2 weeks, it depends.

ALSO REMEMBER
SEND YOUR $1 OUT TO EVERYONE ON THE LIST, EVEN IF THEY ARE NOT FROM THE U.S.

2036. Need help with high SWR

Newsgroup: rec.radio.cb
Date: 2005-02-01 00:24:05 UTC
From: "Vinnie S." <none@coldmail.com>
Message-ID: <q5itv09ou1s1p5f4i4ctdna6iqnftq2h89@4ax.com>
Source record: 195674

A bunch of people have been helping me here with this. I got my setup running, but have a high SWR on the CB band. Here are the parameters:

My SWR is 1.5 on channel 1, and 3 on channel 40.

1. I have a a 6 foot Firestik in the attic. I am using 8 pieces of 10 gauge wire, all 102" long, as a ground plane connected to the mounting stud.

2. The mounting stud and ground plane wires are not connected to earth ground. There is no way I can get a ground rod into the frozen ground. Not at least for a few weeks.

3. I am using 50' of LMR-400 coax. No shorts measured.

4. I have a RF choke/balun of about 8 turns, 8 inches round, about 2 inches below the antenna and ground plane wires. I cannot get it any lower.

5. The radio is a HR-2510, and that is not grounded for the same reason as #2.

I did a frequency check to see where this antenna is tuned. It seems to be tuned for 26.500-26.800 MHz. The SWR is a flat 1.2 across that band. It starts to when I go below or above that band.

I wanted to know if there is anything I should do before I cut the wire on the Firestik. Would grounding the ground plane or the radio to a ground rod help?

And suggestions are appeciated.

Vinnie S.

This may seem overly simplistic or stupid, but try removing the plastic cap on the end of the antenna. It affected my SWR on one I had. I can't remember which way, but I do remember it made a difference.

Correct. That is what is on the Firestik website too. But it was so out of wack
on 27 MHz, I was wonder is I did something wrong. I wanted to see what people
had to say before I cut it.

Because of the close proximity of the roof structure inside the attic
you are adding more capacitance to the antenna than what would
normally be there.

In order to bring the antenna back into resonance you'll need to
counteract the increased capacitance by decreasing the inductance.

This is done by shortening the antenna.

I don't believe you'll ever be able to get your match as low as you
could in free air. This is because you'll get more induced antenna
currents whenever the antenna is located inside a house.

Hello, Richard

Yep, you are right. What a surprise I received one day when my ISP changed my DSL IP address! LOL. Normally, cable and DSL accounts are fixed - but not forever.

As to dial-up accounts, you are also correct in that they change *every* time you connect. Apparently some of the spammers love AOL as AOL isn't particularly responsive to complaints and it is hard to trace back a message - but who wants to pay that kind of money per month for America Off Line?

As to me, I am probably headed back to DSL as they offered me two years of all phone features (free unlimited long distance within the U.S., caller id, call waiting, call forwarding, call blocking, 3 way calling and a big list of other features) as well as 3000k DSL for $64.95 per month. Hmmmmmm .... kinda like that 'fixed' IP for that price and speed ;)

Best regards from Rochester, NY
Jim

I got it down to 1.5 on 40, and 1.3 on 1. I can probably get it down to 1.3 on 40, and that is it.

Hello Vinnie:

If that antenna doesn't work, maybe a out side stealth small gauge wire
vertical dipole will work great, if you have some tree's around.

Cap off like you said, brought id down to about 2. I clipped some wire for the rest. If I put the cap back on, I have to clip a little more. Firestik says they cut their antenna extra long, so when it tuned to 26.5-26.8, I figured it might work.

That Turner +3B I got from the attic seems to work real well. I got glowing reports. When I first wired it, I put the no-connections wires on pin 5. I didn't remember that pin 4 and 5 on the HR-2510 are channel up and down. So my channels were scrolling at light speed ! LOL. Fixed that real fast. I didn't remember because I never used the original mic.

Perhaps Punxsutawney Phil won't see his shadow this year. You can then
exit the cave and enjoy something other than artificial light. It may
even put an end to your winter depression.
On another note, a friend of mine sold all his stuff this weekend after
selling his home and purchasing a condo. He gave me a KLV amp that needs
a new cord. Do you still need some help to get heard down here?
According to Mason, you sure do.

2060. Re: What does a Palomar 300 Elite put out?

Newsgroup: rec.radio.cb
Date: 2005-02-01 15:18:58 UTC
From: iamnotgeorge@webtv.net
Message-ID: <25935-41FF9DE2-295@storefull-3253.bay.webtv.net>
Source record: 195698

From: TerraDactyl@shadowstorm.com (Terra Dactyl)
  For those that have one or have used one, what does a Palomar 300 Elite put out in honest RMS watts with a tone? There appears to be two versions of the amplifier . The version I am asking about is the one with two SD1446 transistors, and not the one with two MRF-455 transistors. I'm reluctant to believe anything a Dosey peak meter says.
    I have been playing with one on the bench and the output is flakey. One moment the meter says 150 watts on sideband with a tone, and another minute is says about 80 watts with a tone. The broadband output transformer gets VERY hot on mine, and that is going in to a 1000 watt oil filled dummy load with 1.1 SWR. One of the legs on the 1000 pf capacitor soldered to the broadband output transformer did not appeared to be soldered well, so I re-soldered it. The amplifier is now showing about 80 watts consistently, and the output transformer is no longer getting so hot. I'm just wondering whether I fixed it or broke it. The two sd1446 transistors check good when I test them one leg at a time with a diode checker. I am using an average meter to measure the output.
-TD

_
About 225 PEP. 250 would be pushing it to the MAX.

Good, how 'bout making it a nice long leave. Frank you and Steveo and
Twistie do your level best to destroy Dave. Dave is not posting/forging
anything.It's all you and Twistie playing with your good butty Steveo.
You know dam well you and twistie started all of the faggot
shit.......big surprise considering all you guys are founding faggots of
the medina gay cb club.
I guess Steveo promised to suck-off some of your followers and thats why
you and your blow-butties all snap at Dave. Dave is the one guy here
thats NOT doing all sorts of gay bullshit.
It's you Frank. You fancy yourself as some sort of "usenet intellect".
But you're nothing more than a sick, gay, little man who's life revolves
your computer boards and chat rooms. Fuck you and your family you no
good son of a bitch!
And Steveo....... FUCK YOU AND YOUR HOMO LOVER TWISTIE.......... You
filthy asshole!

–

HAhaha..too funny. N3CVJ was the only one not forged and the gay
bullshit and attacks on Frank came only after he manipulated you into
contradicting yourself,,,,repeatedly....again. Go soak your head, Dave.

Who do we know in Detroit, Leeland?

2082. FS: Yaesu FT-900CAT 1.8-30Mhz All mode Transceiver

Newsgroup: rec.radio.cb
Date: 2005-02-02 01:20:54 UTC
From: we6a@wt.net
Message-ID: <1107307254.935232.102340@z14g2000cwz.googlegroups.com>
Source record: 195721

Here is a Yaesu FT-900CAT 1.8-30Mhz All-Mode 100 watt Transceiver. It has the built-in automatic antenna tuner, Collins Mechanical SSB Filter, 500 hz CW Filter, Brand new microphone, brand new control head, and brand new remote kit. It has a built-in CW iambic keyer, watt/SWR meter, IF Shift, Notch Filter, and memories. There are some small scratches on the under part of the main RF unit and some very small scratchs on the top heat sink.

The radio works perfectly and if you use it remotely, it will look as new. Sell for $575 plus shipping.

2083. Cobra C75WXST questions

Newsgroup: rec.radio.cb
Date: 2005-02-02 01:42:47 UTC
From: Tom Cat <tomcatgbmi@aol.com>
Message-ID: <1107308567.631767.14850@f14g2000cwb.googlegroups.com>
Source record: 195722

hi

how do you hook up the antenna and power supply to a Cobra C75WXST?
do you hook them directly to the handset or what?

2084. using a chip-clip on PLL's

Newsgroup: rec.radio.cb
Date: 2005-02-02 02:28:25 UTC
From: sean <seaningram@tds.net>
Message-ID: <42003811$1_2@newspeer2.tds.net>
Source record: 195723

You know those chip clips that techs use on computer chips to test / troubleshoot the chips?

Why not do the same thing to PLL's before actually wiring the final connections when expanding channels?

It would work, use alligator clips or wire wrap the wires around the pins that match the designated pins on the PLL chip and then use some switches to test the switching of channels.

Try it out.

Better than wiring the whole thing up and making the wrong connection.

Say buh bye to aol usenet, loser.

And now, the end is near,
And so I face the final posting.
My friends, I'll say it clear;
I'll state my case of which I'm certain.

I've lived a life that's full -
I've travelled each and every newsgroup.
And more, much more than this,
I did it AOL's way.

Regrets? I've had a few,
But then again, too many to mention.
I did what I had to do
And saw it through without Exception Error.

I planned each newsgroup post -
Each careful word along the byway,
And more, much more than this,
I did it AOL's way.

Yes, there were times, I'm sure you knew,
When AOL bit off more than it could chew,
But through it all, when there was doubt,
AOL ate it up and spit it out.
I faced it all and I stood tall
And did it AOL's way.

I've loved, I've laughed and cried,
I've had my fill - my share of losing (connections).
But now, as tears subside,
I find it all so amusing.

To think I did all that,
And may I say, not in a shy way -
Oh no. Oh no, not me.
I did it AOL's way.

For what is an ISP? What has it got?
If not Newsgroups - Then it has naught.
To say the things he truly feels
And not the words of one who kneels.
The record shows I took the blows
And did it AOL's way.

Yes, it was AOL's way...

There is an interface box with a SO239 and power leads coming out, also an external speaker jack. Hide the box if you want, also comes with a mounting flange for the conection whip so you can "plug into the dash"

Chad

>"SandBagger"

N3CVJ

Yea, Dave is having dilemmas these days, personally attacking those with whom he disagrees. The pattern never changes. Dave talks shit, Dave gets corrected. Dave tries to change subject, Dave gets corrected. Dave gets hostile, Dave gets corrected. Dave accuses those who disagree with his lunatic rants as "taking sides". Dave gets corrected.
Dave calls names. Dave gets corrected, Dave goes back underground with his sock puppet, wounded ego in tow. Dave's ego joins his reputation.
I'm surprised you would bring such a thing forward, but hey,,,,,you go, girl!

Mission accomplished. You're still on the outside looking in and not
permitted to play.

>My ip isn't on that list ,

Perhaps not the one of which you are connected at this time. (shrug).
Means nothing.

> I have never went to that web site,

>it has

>nothing there that interests me.

Readily admitting that responding only to posts that are of no interest
to you, is the first step in recognizing your rather bizarre behavior.
Acceptance of such as other than normal is the second step, and change
is the final step in your necessary rebirthing process. Stick around, as
you've come a long way since hanging around those of us of whom you
admire and aspire to be like.

Physician, heal thyself! Only you are guessing. You continue to refer me
as "Twisty". I will clarify for your immediate gratification,
itoldyouiamnotiamnotgeorge, I am iamnotgeorge.

Flip that wrist
Flip that wrist
Flip that wrist so limp
mopey is a sissy boy
With the IQ of a chimp
too bad about you having to post from elsewhere, chump.

Delusional much? I've been posting from the same NSP for at least
5 years, fugly. Ain't shit you can do about it either.

Knuckles or gloves, or are you too skeered of me still?

Nope. Obsess about me much, Doug?

Now answer the questions:

1. How is the court ordered shrink working out for you?

2. How's the court ordered job hunt going?

3. How's the court ordered wage withholding going?

4. Have you made the rain report for jamming repeaters again, Doug?

5. Have you threatened to kick anyone elses ass, only to hav e them show
up at your section 8 slum and prove what a fucking coward yo u are, maggot?

Wink at me
And I'll slurp up your pee pee
I am duggie

I'll do gayboy things
If you want me to
I am duggie

They are yours
My mouth and anal hole
Hammies, you've got full control
I am duggie

Pull another string
And I'll suck your ding a ling
I am duggie

Snap your fingers
And I'll turn gay sex tricks for you
I am duggie

Your wish for some head is my command
I'm the biggest fag
On the CB band
I am duggie

I'm just a queen
A fag-assed little queen
Why are you hammies so mean?

You have control
I do what I'm told
I'll do just anything for you
I am duggie

I am duggie

Just pull down your zipper
And I'll deep throat your dong
I am duggie

Make me get butt fucked
Or make me your gay slut
I am duggie

Use me hard
I love those hard gay tricks

Im a big faggot
And I love to suck on dicks
I am duggie

I'm your sukkin, fukkin
Jizz eatin' little faggot
I'm dyin for some cock
I'll blow the Anti flock

Blow you
Rim you
Triiiiiiiick foooor youuuuu
I am N8WWM DUGGIE

Hi,

anyone know how i can get a hold of Malzev's wintransceiver software?
Winjack.exe
I cannot download it from Tripos for some reason.
http://members.tripod.com/~Malzev/cb-radio/winjack.htm returns an error when
trying to d/l the executable :(

Sorry I missed that.

But one county south of there (Wood County) the state troopers stopped an Ohio Supreme Court Justice (the only Democrat on that bench) while driving a government vehicle for weaving and hiccupping. After rendering her license and registration, she sped away. The troopers followed her, observed more weaving, and pulled her over again. She wanted special treatment because of her status in life.

Party girl refused the breathalyzer, but when she finally succumbed, she blew a point 23. Awesome! Maybe she'll do a recruiting poster for the US Navy.

2131. L37 and L38 values for Uniden Grant XL

Newsgroup: rec.radio.cb
Date: 2005-02-03 03:19:21 UTC
From: sean <seaningram@tds.net>
Message-ID: <4201957a$1_2@newspeer2.tds.net>
Source record: 195821

What are the (micro-Henrys) values for L37 and L38 on the Uniden Grant XL?
(PLL MB8719)

I have unsoldered and completely removed them both.

I am unable to locate it on the schematic.

(I have someone that can help me re-calibrate the radio after the
installation.)

What are the drawbacks /side-effects of transplanting Inductors from other
40 channel AM/SSB radios?

Tnx,
Sean
Amelia, Virginia

Toledo Amateur Radio Club
7234 Latcha Road
Perrysburg, OH 43551
Attn: Trustee John C. Lagger, AA8XS

RE: Warning Notice--Amateur Repeater W8RZM

Dear Mr. Lagger:

Our records indicate that you are the trustee for the above repeater system. Enclosed are recordings of violations on the repeater by N8WWM. The transmissions continued for a considerable time and there was no evidence of a control operator.

Since you are the trustee for the repeater, it is important for you to understand that you are responsible for its proper operation. The decision to operate a repeater is a totally voluntarily one. Repeaters are a convenience in the Amateur Radio Service, not a necessity. A repeater is a station just like any other station; and under Section 97.205 of the Commission's rules, all stations must have a licensee and control operator. Under Sections 97.103(a) and 97.105, control operators must ensure the immediate proper operation of a station, regardless of the type of station control. Furthermore, "automatic" control does not mean "unattended" operation. Unattended operation is not authorized under the rules.

The repeater licensee/trustee is responsible for all recurring violations and violations that are not inadvertent, just as a licensee is responsible for a base station HF station operation in the licensee's home. You must prevent recurring and deliberate violations on the repeater by locking rule violators out, using tones, warning users, limiting its operation, or taking whatever steps necessary commensurate with your responsibility as the licensee of the station. If you are unable to do so, then you must shut down your station.

If you are unwilling or unable to prevent violations on the W8RZM repeater, then your operator and station license will be subject to enforcement action by the Commission. Such action may include monetary forfeiture, operator license suspension or station license revocation.

<chuckle> :))

I was the only one not forged? Was Jim forged? How about Lancer? Keith
Hoseman? Vinnie? Kevin? Eric? Tnom? Others?

There are several regular members of this group who haven't been
forged. In fact, there are more that haven't been forged than have.
The only people who have been forged are the same people who have been
outspoken against Doug/George/ Etc.

The reason that I haven't been forged, is that I haven't been
outspoken against them, as you and some others have. They don't have a
beef with me.

Not one of these "forges" has either the same isp or IP address as me.
Only your ridiculous claim of my "having several ISP's" is the only
explanation you have to reconcile this glaring error.

But the truth is that you cannot prove your allegation. You are taking pot shots in the wind. And your ignorance remains glaringly apparent, and that only emboldens those who are forging to keep doing it, as they laugh at your expense.

You are the one who can't stay on topic. All the way back to the very
first discussion about CB rules, when you kept trying to deflect the
topic to USENET rules.

>Dave gets hostile, Dave gets corrected.

Hostile? When have I ever gotten hostile? This is entertainment for
me. I love watching puppets dance.

> Dave accuses those who disagree with his
>lunatic rants as "taking sides". Dave gets corrected.

You are taking sides. The wrong ones.

>Dave calls names. Dave gets corrected, Dave goes back underground with
>his sock puppet,

I have no sock puppets, and you can't prove otherwise. Unlike you, who
sees fit to change your name on a semi-regular basis.

You still suffer from aspects of anti-social and narcisistic
personality disorders. You see yourself as better than everyone else.
You are convinced that you represent the majority view and can't
comprehend that people would disagree with you. That's why you believe
that the many people who take you to task for your warped viewpoints
are really one person "forging". Your psyche does not allow you to
contemplate that you might just be wrong.

Damn, Dave. That is a great website. Great pic and history. I actually got my feet wet when I was 10, around 1977, right at the peak/end of the craze, when I was given channel 14 walkie talkie. I was hooked. Unfortunately, I didn't get my first CB until 1983, and py parents didn't support this hobby too well. I had to essentially get my own power kic, antenna, etc, by usin gthe bus ot my 10 speed bike. The only thing I regret was that I was off the band for 20 years, because I thought it was dead. You never saw CBs in store anymore.

The problem with that approach is that some of the pins are hard wired
to ground or +5V and need to be "freed" or cut loose and the proper
pull-up resistor installed so that the pin can be switched. The
channel selector switch itself may "interfere" with your modification.
If, for example, the switch applies a hard +5V and you try to ground
it, you just shorted out the supply.

Depending on the make of radio, some of the pins may need to be cut
loose to fully change state. It's not as simple as just dropping a
chip clip on top of the PLL if you want full capability.

Thank you. It is a labor of love for a hobby that has been my
companion for 35 years. I've tried to recount much of what was
happening back then in my home town. I'm lucky that I've kept a lot of
stuff from back then.

> Great pic and history. I actually got my
>feet wet when I was 10, around 1977, right at the peak/end of the craze, when I

That's sounds VERY familiar. Most of my friends (and me) started the
same way.

>Unfortunately, I didn't get my
>first CB until 1983, and py parents didn't support this hobby too well.

My mother wasn't too keen either. She especially didn't like outside
antennas. I had to work around this for a while.

> I had to
>essentially get my own power kic, antenna, etc, by usin gthe bus ot my 10 speed
>bike. The only thing I regret was that I was off the band for 20 years, because
>I thought it was dead. You never saw CBs in store anymore.

The CB band was at its hottest in the 70's. Then the high noise of the
sunspot cycle at the end of the 70's sort of chased a lot of the
casual users off the band. The 80's saw the rise of freebanding, and
export radios. CB was not as much a social "fad", but an actual radio
hobby for more serious radio types.

CB continued to grow up until the mid 90's when the internet and cell
phones started to nip into the popularity of CB. New technologies are
more "hip" and "cool" to young people, and you'll find far less people
wanting to get into CB nowadays. Most of the people on CB now have
been around for a while. Some (like you it seems) are "rediscovering"

a lost love, and there are a good many people who are into restoring "vintage" classic radios. I guess it's not much different than the hams who still run old Collins and Hammerlund radios, when there are far newer and better (and much more expensive) designs around. Much of it is nostalgia. Trying to re-live the past, with that warm glow and smell of tube radios.

The equipment is only one part. It was the people who truly made CB what it was for me. I'm still hopeful for a resurgence of old timers in my area.

Yep, comes with it, Not much in there, just power, ext speaker switching, filter network and box. that part is sold as a spare from Cobra so the handheld unit can be transferred between different vehicles.

Link:
http://www.cobra.com/index.php?page=shop/flypage&product_id=219&id=1

'Bout 28 bucks. I bought one off E-bay for cheaper when I was using one of these.

Good, how 'bout making it a nice long leave. Frank you and Steveo and
Twistie do your level best to destroy Dave. Dave is not posting/forging
anything.It's all you and Twistie playing with your good butty Steveo.
You know dam well you and twistie started all of the faggot
shit.......big surprise considering all you guys are founding faggots of
the medina gay cb club.
I guess Steveo promised to suck-off some of your followers and thats why
you and your blow-butties all snap at Dave. Dave is the one guy here
thats NOT doing all sorts of gay bullshit.
It's you Frank. You fancy yourself as some sort of "usenet intellect".
But you're nothing more than a sick, gay, little man who's life revolves
your computer boards and chat rooms. Fuck you and your family you no
good son of a bitch!
And Steveo....... FUCK YOU AND YOUR HOMO LOVER TWISTIE.......... You
filthy asshole!
_
HAhaha..too funny. N3CVJ was the only one not forged and the gay
bullshit and attacks on Frank came only after he manipulated you into
contradicting yourself,,,,repeatedly....again. Go soak your head, Dave.

>I was the only one not forged? Was Jim

>forged?

On many ooccasion, he was attacked by those you have defended.

>How about Lancer?

Same.

> Keith Hoseman?

You forged him last week and tried to make it seem like it was Dogie.
You're weak and just can't help yourself, Davie. Your problems dictate
your behavior and you can not change. Your intentional misspelling and
disrespect of Keith's last name illustrates not only your malice, but
holds perfectly with the posts you and n8wwm have made attacking Keith
and calling him "Judas" because he found out what Dogie and those who

defend him are about...lesions to ham radio.

>There are several regular members of this

>group who haven't been forged. In fact, there

>are more that haven't been forged than have.

>The only people who have been forged are

>the same people who have been outspoken

>against Doug/George/ Etc.

Right,,,like Keith,,and now your disdain is in control of your actions again and you are disrespecting him by altering the spelling of his name. The timing is impeccable, as you have held many exchanges with Keith in the past with no deviation of the spelling in his name. Extraordinary timing, actually, that your malice comes towards Keith came right on the heel of Dogie's malice toward Keith and your forges of him.

>The reason that I haven't been forged, is that I
>haven't been outspoken against them, as you

>and some others have. They don't have a beef
>with me.

I see....so you disagree with Dogie and Geogre when they deny the forgeries and blame Mopar for them. Consider everyone you named most certainly HAS been outspoken against the bullshit at one time or another. If you weren't diagnosed with such chronic disorders, you may comprehend such, but it appears that soma you are abusing has taken its toll. Get some help, Dave. The drug was meant to be a short term aid, not a long-time crutch as you have made it.

>Not one of these "forges" has either the same

>isp or IP address as me.

Your claims about your accesses have been shown to be bullshit, by more than one person.

>Only your ridiculous claim of my "having

>several ISP's" is the only explanation you have
>to reconcile this glaring error.

I thought I made an error once, but I was mistaken.

>But the truth is that you cannot prove your

>allegation.

As you have never proved any of yours. Pot, kettle, black. You are a hypocrite and thanks to these pages, those opinions who I do value have

come to recognize you as such.

>You are taking pot shots in the wind.

Actually, you introduced that behavior with your delusions of psychiatric qualifications based on what you refer "empirical observation", the same method that has you claiming roger beeps are illegal via the absence of a rule permitting them.

> And your ignorance remains glaringly

>apparent,

Tell us more about your skills and length of time in radio that has you claiming roger eeps are illegal. Since that subject has illustrated just how clueless and ignorant you are concerning radio law, it is much too painful for you to address.

> and that only emboldens those who are

>forging to keep doing it, as they laugh at your

>expense.

Keep checking those pockets for spare change while calling others poor. Actually, you have no choice in the matter and never did..

AmnotGeorgeBush) wrote:
Yea, Dave is having dilemmas these days, personally attacking those with
whom he disagrees.

>I only get personal when the opposition does

>so to me first.

That simply is not true and has been illustrated on multiple occasion.
In fact, you have initiated name calling and insults going back to your
infancy stages in this group. Whenever you disagree with someone, your
tone gets shitty, and then the insults come rapidly from your potty
mouth. You then attempt to defend and justify your ignorance with more
ignorance,,such as "he talks dx, and dx is a federal law, so breaking it
makes one a federal criminal". Such a statement illustrates your
profound insistence on remaining uneducated on judiciary and fiduciary
matters as pertaining to civil and criminal law, but not as well as your
invoked defense as to why you incorrectly insist roger beeps are
illegal.

_
  The pattern never changes. Dave talks shit,
Dave gets corrected.

>When?

Roger beeps,,,civil matters vs criminal matters.....accesses to
rec.radio.cb...off you go, now.

_
Dave tries to change subject, Dave gets corrected.

>You are the one who can't stay on topic.

Tell us your reason for calling innocent people "criminals" based on
nothing more than your invoked and self-professed powers of "empirical
observation"...the same method of which you utilize for saying roger
beeps are illegal..the same method you utilize rendering you unable to
distinguish whether penalties against a speeder going over 70 MPH
(federally mandated law) and a dxer are of a criminal nature or mere
civil infraction.

>All the way back to the very first discussion

>about CB rules, when you kept trying to

>deflect the topic to USENET rules.

Introduction of rules were not done by myself.Your taking issue with me bringing up usenet rules when you wish to remain only speaking of cb rules illustrates two things of your nature....A) You are a hypocrite who selectively chooses which rules to obey and B) you are a hypocrite who has done just that. On several occasion you have invoked other rules of society making contradictory statements of what you are saying now. In fact, you have claimed those who can not be trusted to follow the cb rules, can not be trusted to follow other rules of society. I merely illustrated that the same may hold true for your lost usenet accesses. In fact, I would enjoy nothing more
than to explore this avenue with you, Dave.
We can illustrate the terms of service agreements that come with several of the many services you have used to access this group and then compare the length of time spent with each until your service was terminated for failure to follow the rules set forth.

_
Dave gets hostile, Dave gets corrected.

>Hostile? When have I ever gotten hostile?

Under the influence of Soma, calling people names, accusing people of "taking sides" against you reeks of paranoid schitzophrenia.

> This is entertainment for me.

That's all good. Hell, as long as you find humor in your self-professed moronic claims, we can all enjoy you.

>I love watching puppets dance.

Especially when they are directed and goaded into making statements about roger beeps being illegal right on the heels of their comments totuing their skill and length of time in radio.

_
 Dave accuses those who disagree with his lunatic rants as "taking sides". Dave gets corrected.

>You are taking sides.

For once in your life, try and be accurate..I *am* the side.

>The wrong ones.

You have demonstrated a profound weakness for saying this of all you fear, admire, and for which you can not keep up.

_
Dave calls names. Dave gets corrected, Dave goes back underground with his sock puppet,

>I have no sock puppets,

You do.

>and you can't prove otherwise.

Hehe,,,you just did.

>Unlike you, who sees fit to change your name

>on a semi-regular basis.

You are thinking of your rec.radio.cb accesses, not mine.

>You still suffer from aspects of anti-social and

>narcisistic personality disorders.

This is where you soma-originated delusions take over. You can't even comprehend simple radio law for which you self-profess you are skillfully adept.....one certainly can not expect you to be proficient in any other areas you may profess.

> You see yourself as better than everyone

>else.

I certainly do not. In fact, my posts in the past have maintained the opposite of everything you try and sell, only, your track record has never been more dismal. you have had a terrible time this winter, Dave.

>You are convinced that you represent the

>majority view and can't comprehend that

>people would disagree with you.

Yep, I am convinced I am much more in tune with the "majority view" than what you self-maintain.

>That's why you believe that the many people

>who take you to task for your warped

>viewpoints are really one person "forging".

Let's analyze your newest false statement for a second, as this is yet another opportunity to illustrate your double-talk and two-facedness. The only "person" that is constipated
is you. Based on your own comments concerning your obsession with real identities, you are once again, all alone in your delusions that you take any one "to task."

> Your psyche does not allow you to

>contemplate that you might just be wrong.

Reflect on that statement concerning your pasted ignorance all over usenet that roger beeps are illegal because you failed to locate a rule by the fcc permitting their use.

>Dave

>N3CVJ

>"Sandbagger"

itoldyouiamnotiamnotgeorge, I am iamnotgeorge.

>So now you are attempting to deny that you

>are Twisty?

You are in no position to ask a question of another prior to answering
the question posed to yourself. Such behavior illustrates not only your
ire and illiteracy regarding proper communication, but your blatant
hypocrisy responsibe for your reputation as a lid.
Let us try again, ok Dave?
Have you figured out roger beeps are not illegal yet, Dave? Have you
mustered up the courage to face your own incompetence and answer those
painful questions that knock the hell out of your twisted logic? You
maintain a dxer is a federal criminal and the only criteria you offer
for such ignorance is the dxer is "breaking a rule enacted by the feds."
A speeder going faster than 70 MPH is also breaking a federal rule and
the act has a real possibility to maim, kil, or injure. Do you also
maintain the speeder is a "federal criminal" Dave? Take you time now,
and do address this subject when it isn;t so difficult. Perhaps when you
drop the soma abuse...

>You can change you name, but you can't

>change your style.

And that style would be recgonized by your self-professed skills arrived
via your length of time in radio and "empirical observation" skills
responsible for you bringing us cries of "roger beeps are illegal."

>Good luck......

Sean, I was just thinking you should try and get another scrap unit, and try to use both to get one working. The problem you are going to have is not the cost of components. It's the minimum order bullshit, and handling charges. You might need $10 of components, and be nailed for $30. RFparts is one of those.

True.
I wouldn't even think about sending it in, cause like you said that parts are much easier to come by and that I could try looking for a scrap unit to get one of them going instead of dealing with shipping charges.

I just wasn't sure on how to measure those inductors that have those slugs cause there are 4 pins in a square formation at the bottom.

There's a Frost Fest this month at the Richmond Showplace in Henrico County, VA and I'm gonna see what I can find.

Tnx.

Hey, I put the newsreader.com sig file back at the bottom of my posts. If
it doesn't say http://NewsReader.Com 30 GB/Month at the bottom, it is
someone like dogie forging me.

If he forges http://NewsReader.Com 30 GB/Month, he will have to deal
with Curt and upstream trouble.

Sorry to draw such a jackass to my every post.

You need to direct that to the idioso who took them OUT before I even went
to the flea market.

You did NOT read my post whatsoever!

Go BACK and READ!
Where does it say that I performed a mod and screwed up the radio?

NOWHERE!

If you don't have any useful information in relation to this post or to
rec.radio.cb, then you better go play your childish games on another
newsgroup before I report you to your ISP.
And you better be more creative than using a non-valid email address.

Potty mouth? When have I ever used indecent language? Please be
specific.

> You then attempt to defend and justify your ignorance with more
>ignorance,,such as "he talks dx, and dx is a federal law, so breaking it
>makes one a federal criminal".

That is a basic logical progression. One that you seem damned and
determined to tear apart, but you cannot.

Talking DX on the CB and on illegal channels is against federal law.
That is a fact.

Breaking federal law makes one guilty of engaging in criminal
behavior.

If one is caught, he will be convicted of the same, and will wear the
brand officially.

The fact that someone hasn't been caught yet does not diminish the
criminal nature of that which he is engaged in.

The mindset "It's only illegal if you're are caught" is a
justification technique used by anti-social people to somehow minimize
or soften the severity of what they do. It's an excuse used by
slackers.

>ï¿½ï¿½The pattern never changes. Dave talks shit,
>Dave gets corrected.

>>When?

>Roger beeps,,,civil matters vs criminal matters.....accesses to
>rec.radio.cb...off you go, now.

None of which you have proven. You can't cite a rule which specifically allows Roger Beeps. You can't come up with any examples of law which disproves the logic of my assertion. And lastly, you can not prove that I have had any access to this group through any means other than what I have told you.

In other words, you are a miserable failure in each and every case you've tried to make.

>Dave tries to change subject, Dave gets corrected.

>>You are the one who can't stay on topic.

>Tell us your reason for calling innocent people "criminals" based on
>nothing more than your invoked and self-professed powers of "empirical
>observation".

If you are breaking the law, you are engaging in criminal behavior. The fact that you haven't been caught yet is irrelevant.

If a station is observed talking DX on 27.555, it's a sure bet that they're illegal. It's not rocket science. Most people understand this, and deal with it. But not you. You are the only one in denial, trying to hide behind legal loopholes which may or may not exist, and semantic spin in order to cloud the fact that what you do is illegal, and come with fines and penalties which make the offense severe enough to be called "criminal". You don't get a $10,000 fine or months in jail for speeding, so that comparison is invalid.

>..the same method of which you utilize for saying roger
>beeps are illegal.

Show me the rule that says otherwise.

>.the same method you utilize rendering you unable to
>distinguish whether penalties against a speeder going over 70 MPH
>(federally mandated law) and a dxer are of a criminal nature or mere
>civil infraction.

You keep bringing up this 70 MPH thing. I have never made that comparison. You have me confused with someone else. I'm talking about specific federal radio communications law and nothing else.

>>All the way back to the very first discussion
>>about CB rules, when you kept trying to
>>deflect the topic to USENET rules.

>Introduction of rules were not done by myself.

Deflection of them certainly were.

>Your taking issue with me
>bringing up usenet rules when you wish to remain only speaking of cb
>rules illustrates two things of your nature.

Yes, that I want to remain on topic. Something you can't do.

> I merely
>illustrated that the same may hold true for your lost usenet accesses.
>In fact, I would enjoy nothing more
>than to explore this avenue with you, Dave.
>We can illustrate the terms of service agreements that come with several
>of the many services you have used to access this group and then compare
>the length of time spent with each until your service was terminated for
>failure to follow the rules set forth.

I have never lost a single internet access. Your speculation to the
opposite is a glaring example of your inability to see the forest for
the trees.

In no TOS agreement that I see is there a rule that says that a user
can't post their opinion, or an educated observation, which is all
that I've ever done. That is why my ISP's have always been there. My
last ISP, I had for around 7 years (Google archives will prove that).
My current one (Which I got to take advantage of cable modem speed),
has been intact for the last 2 years or so.

There have been no others, and you can't prove otherwise. So, like you
are prone to tell me when I bring up items like the CB'er who got
busted by the locals in Norristown, since you can't prove it, it must
be a lie. So calling me a liar when you do the same is hypocritical.

_
>Dave gets hostile, Dave gets corrected.
>
>>Hostile? When have I ever gotten hostile?
>
>Under the influence of Soma, calling people names, accusing people of
>"taking sides" against you reeks of paranoid schitzophrenia.

What the hell is Soma anyway?

Not people, only you. You *are* a sociopath whether you want to
believe me or not. The symptoms are there for anyone to read right in
the DSM-IV. They fit your on-line persona to a "T".

That you interpret these accurate observations as "hostile" is further
testimony to your persecution complex, which you can add to the
growing list of psychiatric disorders which plague you.

But take heart. The world isn't out to get you. You aren't important
enough.

>> This is entertainment for me.

>That's all good. Hell, as long as you find humor in your self-professed
>moronic claims, we can all enjoy you.

It's more fun winding you up and watching you spew out a predicable
string of overused terminology. If I could have a dollar for every
time you've used the term "communication's deficit", I could buy a
bigger boat, and hire you to be my bait boy. But you have to promise
not to eat too much of it.

>>I love watching puppets dance.

>>You are taking sides.
>
>
>For once in your life, try and be accurate..I *am* the side.

You aren't that important. Your narcissism notwithstanding.

>>The wrong ones.

>You have demonstrated a profound weakness for saying this of all you
>fear, admire, and for which you can not keep up.

More narcissism? You really are a live case study in the making.

>Dave calls names. Dave gets corrected, Dave goes back underground with
>his sock puppet,
>
>>I have no sock puppets,
>
>
>You do.

Then prove it. But I won't hold my breath because you can't. And those
who are spamming the group will continue to hound you, because there
is nothing you can do about it. You are (To borrow another of your
worn out expressions) impotent.

>>and you can't prove otherwise.
>
>
>Hehe,,,you just did.

More double talk.

>>Unlike you, who sees fit to change your name
>>on a semi-regular basis.

>You are thinking of your rec.radio.cb accesses, not mine.

I have always posted under my name. How I get here is irrelevant. I
always post using the same news server.

>>You are convinced that you represent the
>>majority view and can't comprehend that
>>people would disagree with you.

>Yep, I am convinced I am much more in tune with the "majority view" than
>what you self-maintain.

More narcissism.

Try to tell a nut that he's nuts and he'll swear you're crazy.......

>>That's why you believe that the many people
>>who take you to task for your warped
>>viewpoints are really one person "forging".

>Let's analyze your newest false statement for a second, as this is yet
>another opportunity to illustrate your double-talk and two-facedness.
>The only "person" that is constipated
>is you.

Based on what evidence? Your already demonstrated convoluted thought
processes?

> Based on your own comments concerning your obsession with real
>identities, you are once again, all alone in your delusions that you
>take any one "to task."

I have done nothing to find out anyone's identity. You have me
confused with Frank, and Leland.

In fact, for someone who claims not to care about a person's identity,
you sure went to a bit of trouble (even if you missed the mark a bit)
to learn that my wife's name is "Kimberly T. Hall". (chuckle), and
tried to claim that she's a teacher.

>> Your psyche does not allow you to
>>contemplate that you might just be wrong.

>Reflect on that statement concerning your pasted ignorance all over
>usenet that roger beeps are illegal because you failed to locate a rule
>by the fcc permitting their use.

You failed as well, or you would post it. There fact is that there
isn't a rule that permits it. At the very best, it's a "gray" area,
neither specifically allowed or prohibited. But there are rules which
do address other "amusement or entertainment" devices. Depending on
how you view noise toys like roger beeps, you can make a case either
way.

I am willing to modify my position on this situation once a definitive
rule or judgement, from a person in an official capacity to make them,
is presented.

Your word alone is not sufficient. You aren't in a position of doing
either.

Are the inductors themselves missing or damaged, or are you simply
missing the core slugs?

If all you need are the slugs, you should be able to get replacements
from any junk parts bin radio. The permeability of the slugs are not
that critical in this case, so they should work.

>Cool. wtf are the yankees gonna spend on payroll this season!? :)

Close to 200 million. The funny thing is the Sox fans. They have the 2nd highest payroll. They bitch on how unfair it is. Yet they spend 40 million more then the 3rd highest payroll team, and they really bought their championship. If anybody should be bitching, it should be people like you, who root for the medium market teams that want to spend money, but don't get any revenue sharing because their payroll is not at the very bottom.

2180. OT: Maybe important

Newsgroup: rec.radio.cb
Date: 2005-02-04 13:43:25 UTC
From: Frank Gilliland <w&#65533;renut@NOSPAM&#65533;cehouse.net>
Message-ID: <ivs60155eaakutbid0sut0g3v39gafe22b@4ax.com>
Source record: 195770

This morning I found the following scene in the alley behind the house
next door. It appeared between 9pm (02/03/04) and 2am (02/04/04):

www.icehouse.net/wirenut/000_0327.jpg
www.icehouse.net/wirenut/000_0328.jpg
www.icehouse.net/wirenut/000_0329.jpg
www.icehouse.net/wirenut/000_0330.jpg
www.icehouse.net/wirenut/000_0331.jpg
www.icehouse.net/wirenut/000_0332.jpg
www.icehouse.net/wirenut/000_0333.jpg
www.icehouse.net/wirenut/000_0334.jpg
www.icehouse.net/wirenut/000_0335.jpg
www.icehouse.net/wirenut/000_0336.jpg

The shoe in the last pic is me. Everything in the pics is how I found
it. According to the Spokane Police Dept, this is no more than a case
of illegal dumping of garbage. Now I'm no crime scene analyst, but
does anybody disagree with this conclusion besides me? (BTW, after the
police left I tossed everything in a bag. If anyone wants more details
then email me -- not including pervs.)

Physician, heal thyself! Only you are guessing. You continue to refer me
as "Twisty". I will clarify for your immediate gratification,
itoldyouiamnotiamnotgeorge, I am iamnotgeorge.

>So now you are attempting to deny that you

>are Twisty?

Much in the same manner you claim other hammies agree with you that
"roger beeps are illegal", but you clam up whenever asked to cite one.
Hallucinating, conjuring up, or lying and claiming support for yourself
when it doesn't exist shows just how desperate you truly are. It also
serves as s shining example of

>You can change you name, but you can't

>change your style.

You can cite all the imagined support you want to lend a false image to
your damaged rep, but you act like a little girl experiencing
menstruation for the first time when your hallucinations are questioned.

>Good luck......

Luck is something one who suffers delusionial hallucinations needs, not
his caregiver.
You claimed otehr hammies agreed with you that roger beeps are illlegal.
I maintain there is no other hammie that ignorant of his hobby and asked
just who it is you claim agrees with your gut-wrenching comedy.....and
it had a rather unnerving effect on your posting habits.

That's the same radio as the Midland 79-290. Do a search for that instead.
They're not too expensive either, around $179 bucks or so.

AmnotGeorgeBush) wrote:
>I was the only one not forged? Was Jim

>forged?

On many ooccasion, he was attacked by those you have defended.

>When?

>How about Lancer?

Same.

>Again, when? Show examples.

>Keith Hoseman?

You forged him last week and tried to make it seem like it was Dogie.

>Liar. Prove it was me or keep your trap shut.

Same is said to you concerning your claims, making you the proverbial
purveyor of hypocrisy.
The burden of proof is always on the claimant or accuser, and you adhere
to such when another makes a claim that upsets you greatly. When it is
yourself making a claim, you adhere to a separate set of rules for
yourself and reverse your values by telling others to prove your claims
wrong.Off you go, now,
You're weak and just can't help yourself, Davie. Your problems dictate
your behavior and you can not change.

>Your various psychological afflictions dictate

>you antisocial behavior and that'll never

>change.

I, and every other normal person in the world, including those in the
psychiatric field (of which you hold more delusions concerning your
qualifications) understand that when you invent little playmates to
soothe your ego and damaged psyche, they are real only unto yourself.
That you feel these imagined hammies agree with you that "roger beeps
are illegal" serve only to keep you from cracking, but when you begin
insisting in public usenet forums that these imagined playmates of yours
are beginning to agree with your episodes, someone needs to send you the
wake-up call and let you know your behavior is just a tad off the wall.

>Most mental help professionals agree that a

>true sociopath is un treatable.

In other words, you have no hope of stopping these hallucinations only you can see and hear.

_
Your intentional misspelling and
disrespect of Keith's last name illustrates not only your malice, but holds perfectly with the posts you and n8wwm have made attacking Keith and calling him "Judas" because he found out what Dogie and those who defend him are about...lesions to ham radio.

>A perfect example of your psychological

>delusions.

What was that hammie's call sign that you said agreed with you that roger beeps are illegal, Dave? Oh that's right, you are suffering delusions and hallucinations and projecting on overflow mode.

>An innocent typo gets spun into some sort of

>conspiratorial plot.

You are capable of no such feat. It is nothing of the sort,,,just you disrespecting Keith because he hurt your pal Dogie's feelings. In fact, it makes perfect sense when each time Dogie was confronted, you acted his attorney is considered. You have an uncanny motherly-like protective bond for Dogie and no one really cares why. You should seek some help for your persecution complex, as you always feel the world and society is deteriorating or conspiring against you.

>There are several regular members of this

>group who haven't been forged. In fact, there

>are more that haven't been forged than have.

>The only people who have been forged are

>the same people who have been outspoken

>against Doug/George/ Etc.

Right,,,like Keith,,and now your disdain is in control of your actions again and you are disrespecting him by altering the spelling of his name.

>At least he has the guts to use it.......

Speakiing of "guts",,he wasn't the one that threatened me and said he was coming to my town in a few weeks to look me up to "give me my chance" (whatever that meant),,,that was you. Don't you remember that Dave? It was then I illustrated what a coward you are by giving you every opportunity to cach the check your mouth wrote but yellow ass

couldn't cash. If you need to see the thread where your emotions took over and led to the world seeing you fall apart and degrade yourself further, say the word.

_
The timing is impeccable, as you have held many exchanges with Keith in the past with no deviation of the spelling in his name.

>I've never had to spell his name in the past.

You didn't have to spell it this time either, but you-just-can't-help-yourself, Dave..it's not rocket science.

>The "reply" function does that for me.

Except, of course, in this particular case when the love of your life, (dogie) whom you have defended against all, decides he has a problem with Keith.
Extraordinary timing, actually, that your malice comes towards Keith came right on the heel of Dogie's malice toward Keith and your forges of him.

>I've forged no one.

Prove it.

>You can't prove otherwise.

Empirical observation and the probability factor says you are guilty, and you can point to not one hammie that backs you up on your roger beep claim, even though you claimed it to be so. Case in point,,,you make claims all the time and prove none, yet have no problem reducing yourself to the begging of proof from others.
As you were, Dave.

_
I see....so you disagree with Dogie and Geogre when they deny the forgeries and blame Mopar for them.

>I don't know, nor profess to know who the

>forgers are.

You're not that bright, Dave. You just said you aren't forged because you don't speak out or argue with "them"...
Such a statement is concise and an absolute and leaves no room for doubt.
If you profess to not who they are, it is impossible for you to say what you may or not speak of when exchanging words with "them".
Yet, you claimed you knew exactly why you aren't forged, setting forth you do not speak against "them". Doublespeak and it is impossible for both claims to be 100% true. This leaves only the probability factor.
Watching you hallucinate, demanding proof of other's claims, then telling others to prove you wrong when you make the claim, is all one

needs, Dave.

> Frankly, I'm just not that interested.

Try adn remain focused then. Do you have a call sign for this imaginary
hammie that only you can see agreeing with you?

>The more guys like you make silly

>accusations, the more the forges will continue.

Again, for such a statement to have any validity at all, your knowledge
or hand in the situation must also be absolute.
You have always telepgraphed your guilt Dave,,,you
just-can't-help-yourself.

>You can't do anything about it, as evidenced

>by their continual presence.

I can certainly turn you out.

>Besides, I though you blamed me for the

>forgeries? So who's doing it? It is me? Doug?

>George? Aaron Voobner? Leland? Frank?

>The truth is you don't have a clue.

I not only have every clue, I have proof positive and I imagine some
day, it may indeed come in handy.

_
Consider everyone you named most
certainly HAS been outspoken against the bullshit at one time or
another.

>Not to the degree and laced in the vitriolic

>personal attacks that you have mounted.

Personal attacks originate with you, Dave, The entire group sees that,
Dave. You tried blaming me in the past, now that Frank has educated you,
you turned your personal attacks on him. No news here, Dave, Archives
show you calling names as far back as your first month's entrance to
this group. If your memory is being retarded due to the imagined
playmates you now engage, I will be more than happy to illustrate the
threads where you are reduced to emotional outbursts and name callings
all because you (gasp) disagreed with a poster in usenet.

>Not one of these "forges" has either the same

>isp or IP address as me.

Your claims about your accesses have been shown to be bullshit, by more than one person.

>Who?

Frank, most recently.

>When? How? Prove it.

Haha,,I can see you now,,,spraying your monitor with "pwove it pwove it" over and over.

>But the truth is that you cannot prove your

>allegation.

As you have never proved any of yours.

>Irrelevant. deflection of the issue does not

>make it go away.

Which is why you are unable to distance yourself from making the claim that other hammies agree with you and support your statement that "roger beeps are illegal". You are lying or hallucinating. Either way, you need assistance.
No one but you feels that way. You are alone.

_
Tell us more about your skills and length of time in radio that has you claiming roger eeps are illegal.

>I'd rather discuss your psychological

>anomalies

We can discuss whatever you wish, Davie, but only after you answer the questions posed to you, first, After all, that is how proper communication works and with the help of this group, someday, such may be ingrained upon your bitter self.

>and how they compel you to lie about other

>people and disrupt an otherwise civil

>newsgroup.

Gee Dave, only you have defended Dogie and called his actions civil. But I want you to know I very much take pride in the fact that you refer to my posts as disrupting your world. As always, you telegraph your feelings, but remain challenged and face an inner struggle when you attempt to place your feelings into words. The mere fact that your gray matter interprets my posts as "disruptive" illustrates how out of control your emotions actually are. You're like a damaged tuning fork that gives a sad sound when thumped.

>You remain the newsgroup punch clown.

Clowns take a back seat to those who scream in public about their imaginary playmates, Dave. Have these imagined playmates of yours been with you since childhod or were they just conjured recently to make it look like you were not alone in your incredibly ignorant statement that roger beeps are illegal? Yea,,that's exactly what happened.

>Dave

Exactly, so provide the proof that I am forging other people or that I
have "multiple ISP's".

>I, and every other normal person in the world

You are in no position to know what other people think, nor are you
qualified to determine what is or is not "normal". In fact, your
behavior to date is a textbook example of abnormal behavior. The fact
that you continually claim to know what "the majority" thinks is just
another example of your narcissistic tendencies and your inner craving
for peer approval.

>What was that hammie's call sign that you said agreed with you that
>roger beeps are illegal, Dave?

Who said it was a ham? Certainly not me.

>>An innocent typo gets spun into some sort of
>>conspiratorial plot.

>You are capable of no such feat.

No, but you are, and have (once again).

>You should seek some help
>for your persecution complex, as you always feel the world and society
>is deteriorating or conspiring against you.

You can't even be original. At least if you're going to keep up the
appearance of a debate, at least have the intellectual fortitude to
think up your own comments and not recycle what I just threw at you on
the last go-around.

>Speakiing of "guts",,he wasn't the one that threatened me.....

Threat? What threat? Oh I forgot, you view every encounter through
the lens of paranoia..

I did offer to have a face-to face with you, which you conveniently
weaseled out of.

> ....and said he
>was coming to my town in a few weeks to look me up to "give me my

>over and led to the world seeing you fall apart and degrade yourself
>further, say the word.

You're delusional (no surprise there). You refused to meet and wanted
me to give you my credit card number before you would consider going
any further.

We could have met in any number of public places but you refused to
deal. The truth is you don't want to risk the loss of even one part of
your anonymity. I, on the other hand, have nothing to hide.

If I wanted to do "something" less than honorable, I could have come
to you without your knowing and found out what I wanted to. But that's
not what I wanted.

>Except, of course, in this particular case when the love of your life,
>(dogie) whom you have defended against all, decides he has a problem
>with Keith.

I have never exchanged anything with Doug. I don't even know him,
other that what you purport is being posted by him under an anonymous
guise (hmm, that sounds familiar)......

>Extraordinary timing, actually, that your malice comes towards Keith
>came right on the heel of Dogie's malice toward Keith and your forges of
>him.

I made a mistake spelling Keith's name, and that's malice? You really
are wound up tighter than an 8 day clock.

>>I've forged no one.

>Prove it.

>Empirical observation and the probability factor says you are guilty,

Based on what evidence? In other words, you have nothing. If I'm
guilty, go ahead and have my ISP pulled. Go ahead, I dare you.

>I see....so you disagree with Dogie and Geogre when they deny the
>forgeries and blame Mopar for them.

>>I don't know, nor profess to know who the
>>forgers are.

>You're not that bright, Dave. You just said you aren't forged because
>you don't speak out or argue with "them"...

Them meaning those who spam the newsgroup.

>Such a statement is concise and an absolute and leaves no room for
>doubt.

There are few absolutes in this world. There are always alternative
explanations. What you are engaging in is called "Bifurcation ".

>If you profess to not who they are, it is impossible for you to say what
>you may or not speak of when exchanging words with "them".

You are employing circular reasoning again. Try to stay focussed.

>Yet, you claimed you knew exactly why you aren't forged, setting forth
>you do not speak against "them".

Human nature (something you know little about evidently) has
historically shown that those who feel wronged will lash out at those
who have wronged them. It's no surprise then that the biggest
complainers of the forgers, are the ones being forged.

> Doublespeak and it is impossible for
>both claims to be 100% true. This leaves only the probability factor.

You'd better study some more of Frank's logic, because you're
confusing yourself again.

>>The more guys like you make silly
>>accusations, the more the forges will continue.
>
>Again, for such a statement to have any validity at all, your knowledge
>or hand in the situation must also be absolute.

I know human nature. I've also been on CB radio for 35 years and
behavior like this was common there as well. As long as someone gets a
reaction, the more they will continue to yank your chain. Only you're
too self absorbed and self aggrandizing to see that.

>>You can't do anything about it, as evidenced
>>by their continual presence.

>I can certainly turn you out.

But that would be (another) lie.

>>Besides, I though you blamed me for the
>>forgeries? So who's doing it? It is me? Doug?
>>George? Aaron Voobner? Leland? Frank?
>>The truth is you don't have a clue.

>I not only have every clue, I have proof positive and I imagine some
>day, it may indeed come in handy.

You have nothing, or you would post it. Since I know the truth, I also
know you have no proof. It's just another in a long string of your
lies.

So go ahead, make my day. Have my ISP pulled. I'm waiting.
ï¿½ï¿½
>>Not to the degree and laced in the vitriolic
>>personal attacks that you have mounted.

>Personal attacks originate with you, Dave, The entire group sees that,

Talking for others again? You just can't get beyond that can you? You aren't that important.

>Dave. You tried blaming me in the past, now that Frank has educated you,
>you turned your personal attacks on him.

He started that when he couldn't deal with the fact that his reasons for supporting his political ideologies were shown to be based on little more than subjective bias. His frustration led to snide comments. I merely responded in kind.

>No news here, Dave, Archives
>show you calling names as far back as your first month's entrance to
>this group.

Long before you even knew what USENET was.....

> If your memory is being retarded due to the imagined

Despite your archaic definition of AC, the point is still valid; Those
large AC caps ("motor run" caps, to be specific) are frequently used
by audiophiles as DC power supply caps in SE tube amps because they
have a very low AC resistance, much lower than electrolytic caps.
Power supply caps are selected for their AC resistance, the capacity
in uF being only one of -several- factors figuring into the equation.

<snip>

A highly inductive load can drive the caps backwards via flyback. I've
never seen it happen myself but I know it's possible.

Maybe I have done more work on tubes than you. Maybe not. Maybe my
bench has seen more receivers while your's has seen more sweep-tube
amps. Maybe not. I merely suggested a possibility.

>>Based on the fact that I've never experienced what you described, and

>>caused by leakage in the other cap?
>
>How? The ripple would still not be that great, and it would neither
>exceed the voltage rating of th cap, nor reverse the polarity of it.

Well, if the AC resistance of the leaky cap dropped because of the
leak, then a greater AC voltage would be developed across the good
cap. This in turn would cause a greater AC current in the good cap,
and therefore more heating. So maybe the cap blew because of the extra
heat in combination with the higher DC stresses. I can see how -that-
could happen.

>>>>>Not exactly true. It is the pulsating D.C. current component. There is

>>Ok then. Any voltage has a DC component and an AC component.
>
>>Pure AC has no DC component, and pure DC has no AC component.
>
>Those two statements are contradictory.

Not at all. Your definition that AC must be a zero-crossing current
was repealed along with prohibition. The problem was that there were
getting to be too many terms for variations of direct current, like
'varying direct current' (vdc), 'pulsating direct current' (pdc),
'interrupted direct current'.....etc. So the concept has since been
simplified to say that any current has an AC component and a DC
component.

>>The term

That's what I said. If the input power is 60 Hz then 120 Hz would be a
harmonic, right?

>>The term "ripple" is old and has been replaced by "pard", which

>time constant of the circuit changes and the cap is forced to
>discharge faster, which results in less filtering of the ripple and it
>increases.

A capacitor blocks DC and passes AC; at least that's the simplified
version of it's function. So if you have a cap connected between a DC
source and ground then the DC is blocked while any AC is passed to
ground. How well the capacitor passes AC to ground depends upon it's
AC resistance. What you describe above is essentially the same thing,
but it's overcomplicated and full of holes because you never learned
the basics.

>> When
>>the load becomes large then so does the ripple, and if the cap has a

I hate to break this to you but your tech school did a piss-poor job
if the curriculum started with the study and construction of complex
circuits before covering the basics.

>>>An unregulated power supply will decrease voltage as load increases.

>>the most common) is the AC resistance of the output capacitor, -not-
>>the R/C time constant of the cap with respect to the source and load
>>impedances (which, BTW, are in parallel).
>
>Of course the R/C is in parallel. The cap is across the load.

The cap is in parallel with -both- the source and load impedances; and
while the load impedance may be linear, that's rarely the case for the
source impedance. Also, the capacitance of an electrolytic isn't a
constant; it's non-linear with respect to the voltage (a factor of
it's AC resistance, and another reason why audiophiles prefer motor
caps over electrolytics). Both these nonlinearities end up converting
your overly-simplistic R/C time constant analysis into an integral
function. The issue is further complicated because of the equivalent
series resistance of the capacitor (which, BTW, is a factor of it's AC
resistance, and is also non-linear).

The concepts involved here don't need to be nearly as complicated as
you make them out to be, yet you try to describe the complexities with
over-simplified theory. It's like you are trying to describe baseball
with dumbed-down Newtonian analysis. You still think you can write a
course on the subject? I don't think so.

>>A different scenario happens
>>with high-voltage supplies because regulation is usually achieved with

>That's a very poor regulator. The choke/cap is really just a low pass
>filter, that designed to attenuate 60hz ripple.

That's the static interpretation. But a swinging choke is a component
with dynamic (i.e, nonlinear) characteristics and makes a pretty good
regulator, which is why they have been used so extensively over the
past hundred years, and why they are still in production today.

>>So when is your book coming out?
>

>Since power supplies are so basic, and there is no new information

>>only on probability.
>
>The possibilities are not limitless. There are a finite set of
>conditions which a particular circuit can find itself in. Is it
>probable that a 12V supply was exposed to 500V?

Depends on the circuit.

> Is it probable that a
>rectified output of a supply reversed polarity?

I never said it was.

> Absent of other
>component failures, how many possibilities really exist?

Many, simply because the cause of a failure isn't limited to internal
influences. But even if you limit the scope to the equipment, the
failure of other components is not always obvious. And here's a
perfect example:

The first Peavey 1.3K I ever worked on came into the shop with a blown
bank of power transistors (not uncommon with Peavey amps) and a bad
OP-amp. The obvious conclusion is that the OP-amp locked up and drove
the bank into overload (the amp also has a triac clamp but it rarely
works -- it just nukes a trace on the board and lets the bank blow).
Anyway, that wasn't the case at all. I replaced damn near everything

in that amp and it would still lock up. To make an already long story short... it turns out that Peavey, in their economical wisdom, used a dual-diode as bias seperation for opposite banks of power transistors without noting it in their literature, and one of those diodes had shorted. The component appeared to be perfectly functional, showing a forward voltage drop characteristic of a typical silicon diode, but it was supposed to be -twice- that drop.

So there are -many- possibilities that may or may -not- be obvious.

Go for it! Don't forget to use several different caps, measuring both AC and DC volts across the cap, as well as the time it takes until

failure. Post the results.

>>
>>
>>A light bulb's resistance changes with temperature, but who said a
>>resistor -must- be linear? The textbooks?
>
>The change in temperature is in direct proportion to the applied
>voltage.

Wrong. The resistance is directly proportional to the temperature,
hence the term "temperature coefficient". A light bulb can even be
used as a thermistor for an electronic thermometer. IOW, you can feed
a bulb's filament with a fixed voltage and a constant current will
flow (after the temperature stablizes). Cool the filament and the
current will increase (light bulbs make pretty good wind-chill
detectors). Heat the filament and the current will decrease (good for
determining the temperature of a flame). All happen -irrespective- of
voltage.

Again, you need to go back and learn the basics.

<snip>
>> IOW, the current density through a cross-section of filament
>>is the same regardless of it's thickness or length.
>

>10 times higher than the same wattage bulb in a 120 V configuration.

True, but the cross-sectional current density must be the same in
order to reach the same temperature where it emits the same spectrum.
So why would a thicker filament last longer?

<snip>

Feel free to name some engineers who use the term "drying out" to
describe capacitor failure. Even better, try referencing it in some
authoritative literature. If it's a common term then it should be well
published, right? (Actually, it -is- a common term with engineers but
only in reference to batteries.)

>
>Regardless of the other possibilities, if you disagree that a
>particular component has a high probability of failure, then what you
>are saying, in essence, is that you feel that it has a much lower
>probability of failure

You are constructing a syllogism from a conditional statement by
asserting the second premise, but you assume that second premise
-must- be the only other possibility. It is not. Using your own
subjective assessment of probability, the blank line in the statement

"the problem is _____________ caused by capacitors"

can be filled by any one of a long list of possible descriptors, only
a few of which are listed here:

A. always
B. almost always
C. often
D. sometimes
E. infrequently
F. almost never
G. never

The syllogism that you constructed is thus:

P1: Not B (my statement).
P2: If not B then F.
C: Therefore F.

Although the conclusion is perfectly valid, you ASSUMED that F is the
only possible alternative to B. The conclusion, therefore, is neither
true nor false; it can have no more truth than your assumed premise.
Just because I don't live at the North Pole doesn't mean I -must- live
at the South Pole. Or, for a better example, if you were to say that
the sky is white, and I said it is -not- white, that doesn't mean I'm
saying it's black. It could be blue, red, gray, etc. The colors of the
sky are limited to black and white only in your fantasy realm where,
coincidently, people must be either conservative or liberal.

> Therefore, by extension, it can be assumed that
>you then consider other components have a higher probability of
>failure.

Key word: "assumed". You assumed wrong, as is usually the case
whenever people ASSume things.

>>>>>More chest thumping? What you've done at HP has no bearing on what

All of the above in both applications. So how are they different?

<snip>
>>>Hmm.... My test procedure for that rig used 5mV to set 50% modulation,
>>>with VR6
>>
>>Step 7, and it's 0.5 mV.

>
>It's 5mV in my book.

I don't know what book you have (probably Sams) but mine is the service manual provided by Radio Shaft. I can scan the page if you want. If your book is in error that might explain your need to bypass the LPF. Higher drive at mid-modulation will push the audio into compression earlier, which would easily account for your audio sounding "mushy and compressed", just as you described. My radio sounds just fine without the modification, so it's very likely that -your- book is in error. Not only that, I'm suprised that a person of your self-proclaimed experience would not have suspected the error earlier -- after all, your own description of the audio quality is indicative of overmodulation. Yet you didn't bother to find a more authoritative reference, or compare the calibration specification to that of similar radios (I did, and 50% modulation at 0.5mV is common for Uniden radios that come with the same mic). You could have also compared the cal-spec the radio's rated mic sensitivity. But no, you decided -not- to look for the primary cause of the problem, assumed that the error was in the design and proceeded to chop the filter.

Dave, it's clear that in -both- electronics and politics you have a real problem accepting any possibilities outside the realm of your own prejudice.

>>> and 200 mV to set the 100% limiter threshold with VR7.
>>
>>
>>Step 8, set VR7 for 95 to 98% mod.

>
>What you "told" me wasn't of any real info about the radio itself.

I told you some -very- real info about the radio -- you just didn't
know how important that info is, or how it demonstrates that you
aren't as good with electronics as you think you are.

>>Thanks anyway, but I already used too much time pulling out the mods
>>and restoring it to stock condition -- except for the faceplate. Got a
>>spare?
>
>No I don't. Most of my spare faceplates belong to the bonepile radios,
>most of which are crappy little AM mobiles.

Heard that. Did you see the pic of my "bonepile" that I posted last
fall? I must have a couple dozen of those cheap, little Cobras buried
in the pile, not to mention a half-dozen or so mini-Midlands (which
weren't too awfully bad little radios, just not worth fixing). I
should go through the pile someday, make a list and post it for anyone
looking for parts.

What -you- are engaging in is called "hypocrisy". There are an
infinite number of "absolutes" in this world, the most common being
'change'. And it is 'change' which leads to the fact, as you admit
above, that "there are always alternative explanations". Yet when it
comes to your tech skills you pull a Kerry-esque flip-flop by
proclaiming that -your- interpretation of is the -only- possibility.

<snip>
>> Doublespeak and it is impossible for
>>both claims to be 100% true. This leaves only the probability factor.
>
>You'd better study some more of Frank's logic, because you're
>confusing yourself again.

-YOU- better study some logic because he has a very legitimate
argument, and this time it's not a fallacy. Once again, this is an
inductive argument based on a number of facts that are mostly
irrelevant when taken individually, but collectively they draw a
picture with you in the middle. And while Twisty does tend to jump to
conclusions rather quickly, I have noticed the pattern myself and
agree with his assessment.

>>>The more guys like you make silly
>>>accusations, the more the forges will continue.

Right, Dave. People are either conservatives or liberals. Yeah, we've
heard it from you a jillion times.

<snip>
>>Dave. You tried blaming me in the past, now that Frank has educated you,
>>you turned your personal attacks on him.

>
>He started that when he couldn't deal with the fact that his reasons
>for supporting his political ideologies were shown to be based on
>little more than subjective bias.

My frustration comes when speaking to someone (you) who is obviously
intelligent, yet tosses aside logic and reason when it conflicts with
a belief system based on blind faith.

> His frustration led to snide
>comments. I merely responded in kind.

Wrong: you began our interchange with "Paranoia is not becoming of you
Frank." And that "responded in kind" excuse is the same one you gave
(in the very same post) to defend Bush's 527 smear campaigns against
Kerry. I don't think that's what Jesus meant when he encouraged his
followers to "turn the other cheek", and it's certainly not in the
book of Christain ethics to justify improper behavior by claiming that
the other guy started it first -- that's an excuse used by little
children, bad lawyers and drunks. Or have -conservative- Christains
rewritten the Bible to conform to their own contemporary values?

"Eye of the needle", Dave. And -you- cast the first stone.

<snip>
>>Frank, most recently.
>
>When? Provide the thread. Frank has not blamed me for anything. He
>and I may be at the opposite end of the political spectrum, but he's
>not an idiot, and wouldn't make such a charge.

On the contrary, the values you have gleefully demonstrated during our
discussions have proven that you are a person who believes the end
justifies the means, which locks you into the category of probable
sock-puppeteers.

> Then again, he did call
>you Dave McCampbell..... Only you know how accurate that was.

I called Twisty many things in order to demonstrate the ridiculous
nature of his accusation that I was five different hams (one of which
was Leland, for reasons I can't even fathom). Anyway, it was necessary
to discredit Twisty's name-game because N7VCF was getting a shitload
of harassment. It worked, and the harassment subsided after my own
"counter-accusation" that he was Dave McCampbell.

And for the record, I -still- don't know who Twisty really is and I
-still- don't care.

It would be much better to build a jumper board, move the chip to the
jumper board, install a socket in the radio and plug the jumper board
into the socket. No traces need to be cut, and the board can be easily
removed and replaced with the chip.

How do you think we could improve this ? Does America need better marketing ? Or could it be that our universal unpopularity has something to do with the way we conduct ourselves in international affairs ?

Personally speaking, I believe it is all down to the marketing...

>Talking DX on the CB and on illegal channels

>is against federal law. That is a fact.

(And yet it's so easy and fun. I do it all the time..bust me, Dave.)

>I have no problem with anyone who does it.

Sure you do. You take the non-hammie approach, the non-elmer approach,,the anti-amateur creed approach. You ignorantly and erroneously call people criminals for dxing merely beacuse you are unable to distinguish between a civil and criminal nature.

Firstly, the only criteria you cited as your reason for calling one a "federal criminal", was "it was a rule enacted by the feds, so breaking it is a federal crime and makes one a federal criminal". The manner in whcih you arrived at this decision, was referred by yourself as "progressive logic". This too, was decimated as you were reminded that the 70 mph speed limit also met your criteria. Changing your values in mid-argument, you now invoke that the penalty one receives is now your new criteria.

Heck, even when you were educated by other hammies on here regarding your ignorance claiming "roger beeps are illegal" you chose not to learn.
Off you go again, Dave.

>That's the really funny part about this whole

>thing. Twist will sit here and spin and

>obfuscate and make all sort of excuses to

>deny that what he (and you I guess) does is

>illegal.

Only you are having problems of this nature, Dave. You have always claimed you see posts by me that said this and said that, but, once again, you are the only person to suffer such hallucinations and see things that do not exist...the same as the imaginary amateurs you conjured in order to lend your damaged psyche an illusion of support.,,,because you have none, and it apparently is to much for you to handle. For some reason, it warps you.

> But the law is clear on this.

Everyone is clear on the law but you. You have no clue about the law, Dave. You illustrate it with your position on roger beeps and you solidified it when you claimed you used forensics in your argument. You were to look up the term and learn its definition prior to using it in the futire so as not to embarrass yourself again.

>If you want to take you chances, hey, go for it!

>Just don't pretend what you do is somehow

>"permitted".

Only you are suffering such delusions and hallucinations and playmates that don't exist Dave. No one else is having these difficulties. Youare alone in your suffering.

Can't wait to see the programs the feds are gonna cut to pay for the war and the tax cuts. Bush just realized the bill is coming due and it really has to be paid. Betcha the red states will be screaming the loudest when they have no salt for the roads or when their potholes are the size of small craters and they have to wait in line all day to take care of single task in any federal building, including the post office. Add to that the crime increase that will be a direct result of the domino effect following inflation and the right can bitch about how the liberals screwed the country during the 8 Bush years for many generations to come.

>honorable, I could have come to you without

>your knowing and found out what I wanted to.

>But that's not what I wanted.

Alright,,let's illustrate your lies again for the masses,,,
Faced with no other manner in which to run, you dropped the matter
after this last exchange on Oct 4th, 2004.
You were going on about with excuses, and after realizing that you had a
very real chance to quench *your* stated desire to meet me, you dropped
the topic.

_
>which then gives you a convenient excuse to

>say that you weren't around when I came

>looking.

I have that covered, too. A pic of the day's paper at the dockmaster's
office where his clock (way up high) is very visible for all to see.
You have no excuse.

_
That ended your quest on the matter, but gee Dave, that's not the manner
in which you tell it.
Hey my man, have a great weekend,,the mullet is almost all done and
smoked and I'm heading north bound US 301 to J-town. Good luck to your
Iggles,,,they're gonna get their heads ripped off.

Have one sitting in my closet in "as-new" condition for almost the past ten years. Bought it new around '92 used it on the base for two years and then packed it away. Overall a very nice radio, extremely stable, average output of the 100W model was actually closer to 75W. Had a tremendous receiver, excellent sensitivity and never a problem with splash from adjacent frequencies.

2211. Help on SSB failure

Newsgroup: rec.radio.cb
Date: 2005-02-05 04:49:44 UTC
From: "Vinnie S." <none@coldmail.com>
Message-ID: <osj801dirju8kc7sdum976heond0uqho1v@4ax.com>
Source record: 195901

I am talking to a local on 38 LSB. I am cutting out after about 2-3 seconds of talking. He says I am fine for about 2-3 seconds, and then just go dead. Not happening on AM. I switched power mics, with the same result. Also happend on USB. Then I went and put the radio in the car, and the problem went away. The local said it's my power supply not having enough juice. But it's 12 amp constant, 14 amp surge. It's a PyramidPS-14KX. Again, I am running barefoot with a HR-2510. Is it the power supply? Should I add more caps for filtering?

Can anyone help?

Vinnie S.

I think it comes down to the way Americans present themselves to the world,
and not anything marketing can fix.

You still need a bigger Power supply, The Pyramid brand has a tendency to advertise more than what they actually put out. I had the same problem. Invest in a nice 20 Amp Astron, or tripp-lite power supply and that will take care of things for you. You can always get a good deal on one used if you look. Qrz.com classifieds, Qth.com classifieds, etc. Good luck!

Hi Group!

I have a 100 Bilinear, (pic attached) that I need a schematic for. I have seen the same amp with different names on it, bimbo 100 bilinear, powerline 100, sct-100 but cant find a schmatic.

Can anyone help?

Try finding a small (inexpensive) 13.8V Car battery, and hooking it in
parallel (+ to + and - to -) with your power supply.. The battery will
pick up the slack the power supply can't provide, and the supply will
charge the battery when you're not talking.. Neat solution...

One caveat, though.. once the battery is at full charge, you'll need to
either turn off the power supply, or turn something on (a radio, etc) to
provide SOME load to the power supply so the batter doesn't get overcharged.

I run all my HAM base station gear like this...

-SSB

I am still trying to narrow it down. This might be an intermittent problem. I
was talking SSB during the day, and this didn't occur. Could it be an RF
feedback problem? I just installed an 8 foot ground rod, and will run the wire
tonight. Would this dissipate some of the RF?

Hello Floyd:

If you look in the Motorola RF Transistor Manual, you will see the basic
two transistor RF Linear Amplifier design.

I am sure it woun't be to far from the diagram.

http://www.rfparts.com look under books

Hello Reg:

I saw one in perfect condation at the TRW Swap Meet last Saturday, with the new Eimac 3-500ZG Tubes, and new meters installed on the front for grid curent, Plate Voltage, and Plate Current.

I am sure they where real proud of this amp. Kind of neat seeing a old amp restored and kept on hummin!

If its still there next TRW, there I'll give em your e-mail address.

There's a LESSON here you hams and radio freaks.
What happened to this baseball collector can happen to a
radio collector also....and I know SEVERAL xyl's who'd
just LOVE an opportunity to trash or sell off all of her
hubby's "ham radio junk" just to have him pay her more attention..... ;)

---- cut ---

Ex-Wife Auctions Man's $200,000 Baseball Collection
From the News Section of: http://www.voyeurweb.com/main/Main.html

TUSCON, Arizona -- A woman whose husband spent $200,000
on baseball memorabilia took revenge - by divorcing him and selling
it on eBay.

The husband, 42, told his wife, 45, they couldn't
afford kids or a house, and even took money from
her bank account to add (baseball items) to his collection.

The divorce judge ruled she can have the rare baseball
cards and caps, and she is auctioning them online,
according to news media reports.

The couple had been married for 17 years.
When asked about the auction, the wife
said: "I'm giggling."

-- Holy Strike Out, Voyeurwebbers! It sounds like this guy got
caught looking at an inside fastball and never even swung at
it, hehehe! Meanwhile, his wife managed to knock one out
of the ball park. It wasn't just a grand slam, either, it was a
200-grand slam, hehehe! There's also an important lesson
in this story, Voyeurwebbers: ***If you're hobby becomes
your life ... it's definitely time to get a new hobby***. -- Igor

Hello, Twist

The beginning of this was with Ronald Raygun and star wars. The cuts for the rich were largely paid by cuts to aid the poor. Unfortunately, Bush has created a deficit that is not going to be fixed by stopping all aid to education, health care, or anything else.

I visited the U.K. website. Seems like I am entitled to a work permit in England as my grandfather was Scottish. Everyone here loves to point out the expense of living there and the high taxes. Wow! 5 or 6 bucks a gallon for gasoline.

Well, the income tax is likely lower for most folks over there. 10% for the first several thousand pounds sterling. Then 20% up to something like 40,000 pounds sterling. Then 40% thereafter. So, it isn't all that bad for working stiffs. Lower than here, actually.

Now the costs are somewhat higher with rents something like 12 pounds sterling per day at a hotel (hmm ... perhaps $25.00 .... sounds sort of cheap). Of course, efficiency appartments and flats do cost more. Quite a bit more.

Of course, one has to consider what they earn.

Want to take a guess as to what a nurse makes over there? A nurse specialist (which, I assume, is equivalent to a nurse practioner over here) does make more. I suspect a nurse practioner over here makes something like $30.00 per hour or $60,000 per years. Over there, they make 65,000 pounds sterling. That is over $130,000 per year!

On the website, it appears the low end of things is something like 15 pounds sterling per hour ($30.00), entry level.

Ever wonder what happened since the 1960s and 70s where the wife could stay at home and a skilled tradesman could make a decent living for his wife and kids?

Of course, the Repooblican answer is to send jobs to China where they make 30 cents per hour and claim they are raising our standard of living by getting us cheap goods. Hmmmm ...

Oh, did I mention that England apparently can run their country on taxes similar to ours - *plus* have free health care?

What is wrong with this picture? We just don't do enough for the rich. Perhaps we should give Michael Jackson a free "get out of jail" card should he need it. He's wealthy and he's entitled. Along with the scum bags that wiped out pension plans (and Bush is about to wipe out Social Security). Don't kid yourself. One country that "privatized" their system found out. One guy who went with that private thing found that all along the way, wealthy folks get cuts of that pension for "managing" it. The management team got 30 percent of the take. The end result is that this guy ends up with half of the pension others got without the privitization. Plus, his pension is a 20 year annuity. If he lives beyond that, he's out in the street and no one cares.

Since nothing appears to stick to our teflon don ... I mean president, I'm sure no one will remember the idiot(s) who brought ruination to our country.

One other thing - Bush is *not* a uniter and never intended to be.

Best regards from Rochester, NY
Jim

Yeah, I'm single and that's one of the many reasons why. Marriage is for suckers IMHO. It used to mean somethng many, many years ago but womens mind set have changed to much it isn't worth it now. I've seen FAR too many marriages go down the toilet for my money.

A guy walks into a bar, sits down. Tells the batrender "A round of
drinks on me!"

After getting hs drink, the fellow next to him asks "What's the
occasion Pal?"

"I'm getting married tomorrow! Now I'll be able to get laid any time I
want!!"

The other fellow says "Funny, but that was the reason I got divorced!"

My wife never had to work for my hobby. Before we married we
discussed it. I had been a ham for years before we met. I told her
that I was an Amateur Radio Operator for years before we met and I
would be one long after she's gone. If she couldn't accept that, she
would have to move on. Likewise, I never tried to discourage or
change things about my wife. Those things a person likes and
dislikes, or their hobbies, etc, are part of what makes them the

persons they are. I believe that if we take those things from a person, there will be a hole in their life and they will no longer be the person we met and fell in love with. Of course, it is different if that person changes hobbies, etc. on their own, but it is not good to take it from them.

To include in their budget, support for each other's hobbies is not a bad thing, but to break their budget over any one hobby is not a good thing. My wife never went hungry because I bought a radio.

lol...

Well then, I predict the Colt's coach will soon have an undefeated season,
with another team, ending with a SB win over the Redskins.

Count it! ;-)

2263. Good News! -- Jesus Christ Went To The Cross So You Can Go To Heaven

Newsgroup: rec.radio.cb
Date: 2005-02-06 19:38:25 UTC
From: Good_News_For_You_All@yahoo.com
Message-ID: <1107718705.638714.81220@z14g2000cwz.googlegroups.com>
Source record: 195853

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Have a great day!

Here is a weird one.

When I went to measure PEP on the meter, my SSB seem to be modulating, almost like it was holding a carrier. Even if I turn the mic all the way down, and don't talk, it appears to me measure a full peak my the power meter, and also the radio meter. What is weirder is it appears to be channels 35 and higher on SSB. The lower channels seem to be normal on SSB. They show power only when you are talking.

TITLE: "Jesus Jr. - The Country Western Christ"
ARTIST: The Cab City Combo

(What can be said about a bunch of old puds that
continue to mock classic rock and roll and anything
else that occurs to them? Are they WHAT AMERICA
NEEDS NOW? Are they THE NEXT BIG THING?
Or are they fooling themselves and just wasting everybody's
time. You decide!)

Free MP3 download of this song IS HERE!
--> http://music.download.com/cabcitycombo/3600-9022_32-100151557.html

Lyrics

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! He takes his dad's advice
Jesus Jr! The Country Western Christ

Well he was born in Tennessee
Not somewhere out in Galilee
His dad got his at Calvary
And his mom works at the grocery

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! His grandma Mary's joy
Father, Son and the Holy good old boy

Well Junior takes his name in vain
When folks abuse the passing lane
And at his favorite bar on Main
The only thing he'll raise is cain

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! At least he's not a jew
10-4 Satan, his rig is passin you

Now if his wheels get stuck in mud
He'll part that shoulder like the flood
And when he drives on Easter, bud
His left-hand signal's dripping blood...

Jesus Jr! His grandpa is the Lord
Jesus Jr! got mudguards on his big white ford
Jesus Jr! He takes his dad's advice
Jesus Jr! The Country Western Christ
Jesus Jr! The Country Western Christ

You are certainly an exception and up to about 20 years ago marriages usually worked. But you folks know as well as I do how many shit the bed in the past 20 years. You all know PLENTY of them.

I hope it lasts 20 more.

Thanks. I understand your attitude. Don't give up though. It really is cool when you find the right one. If you do get lucky, make sure you /she or somebody can cook. The first thing to f--k up a home is bad food!! ;)

Subject: FW: MRE Dinner Date
Importance: Low

This was from a grunt whose date unwittingly asked him to cook for her.
Anyone who has had to eat MREs--or for we graybeards, C-Rats--for months
during deployments will appreciate this.

> ----------
> by Frank Rodgers

You found out the secret!

How the hell else are you going to last a long time with someone if they are not your friend. Besides being friends the only other thing required is that you both share the expectations of the marriage like kids, money and who does what.

It was terrible, wasn't it? That being said, the two teams were a pretty good match. 2 decent SB's in a row. Does this mean the world will soon come to an end? ;-)

2 observations.

McNabb was extremely tight. Seemed nervous all game. Bad scouting on the eagles part. Dionne Branch was a terror, and they did nothing to stop him. Also, The Eagles couldn't stop a screen. But that clock managment was pathetic.

Yeah, but the only reason clock management came into play is the fact that NE thought they had it in the bag and let their defenses down somewhat. I see it as the rest of the country, and Philly got owned. Of course, they did put up fight, but were clearly out of their league.

Well, I am not a Philly fan. But they were 14-14 at the end of 3. And that was with poor play from McNabb. I think clock management was a factor. I think they could have won. But NE was clearly more experienced, and it showed.

Wait a minute and read this
----- make money with 6 dollars ,easy money no bull I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT!?... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, WHY it works... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a rip-off; it is not indecent; it is legal and it is 99% no risk - it really works! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal. Mail the 6 envelopes to the following addresses:
#1)Kevin Prentice 13445229 St.Springfield Gardens Laurelton, NY 11413 USA

#2) Mercia Alencar- Rua Itacoatiara, Q.F Casa 11 Parque Amazonas São Luis - Maranhão - Brasil CEP: 65030-740

#3)Luis Pimentel 9678 Fontainbleau Blvd. #105 Miami, Fl 33172 USA

#4) Patty Cabrales 1412 1/2 Fairfax Aue. Los Angeles,CA 90019 USA

#5) Shane Dunston 14845 gandesa rd. La Mirada, CA 90638 USA

#6) Peggy Barsch - C/Tomas Morales, nº83, portal2 5B- 35004 Las Palmas- SPAIN

STEP 2: Now take the #1 name off the list that you see above, move the other names up 1 place (#2 becomes #1, #3 becomes #2, etc...) and add YOUR name and address as number 6 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to24,000 groups) All you need is 200, but remember, the more you post, the more money you make! You won't get very much unless you post like crazy. This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) so, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an

opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! -----DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS-----
Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this newsletter, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.
Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message selector. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if

it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will really work Back to top

I have read elsewhere that Pyramid power supplies are adversely affected by RF. They don't have filtering to keep RF from following the power wires back to the regulator. However, I think there may be a problem with the radio. Has it been used long on this P.S. or is it a new setup? Can you borrow a different P.S. from a friend to verify the problem?

1. I'm 26, a radio nut, and single.
2. I do have female friends who 'spin out' out my hobby.
3. I don't watch TV or listen to domestic radio
4. I agree with the majority of posts that say one accepts thier wife/gf's hobby and they accept yours
5. If this guy lost all his baseball (perhaps he should play cricket) stuff and it came to this he never really had a true relationship with his wife.
6. It's a sad world today, where most guys my age in VK, make sure they have assets listed with lawyers in thier own right before they ever move in with a girl, hence the reason that all-without exception-my mates still live at home with thier parents.
7. He obviously never read the Amateur's Code "never place hobby above work, family and other commitments"

Inaudible RF feedback through the mic? Bad balanced modulator? I would look
for bad grounds and cold solder joints inside the radio. Just out of
curiosity, does that radio have a mic sensitivity VR on SSB and has it been
turned up?

>heard it from you a jillion times.

I never made such a claim. There is a virtually infinite degree of
relativity between those two points. People may "lean" one way or
another with varying degrees.

But to the point, like I told Twisty, one of my hobbies is the study
of human behavior, more specifically, how people behave under
predictable conditions. Twisty seems to feel that if one lacks a
professional degree in the associated field, they can't possibly know
anything about it. Tell that to the many entrepreneurs who made
fortunes in business without any professional schooling. While I
can't legally practice any form of psychology, I do know quite a bit
about it.

>>>Dave. You tried blaming me in the past, now that Frank has educated you,

>intelligent, yet tosses aside logic and reason when it conflicts with
>a belief system based on blind faith.

Frank, you still don't get it. You chastise me for, as you put it, throwing logic to the wind when it comes to politics, yet you are doing the exact same thing in the defense of YOUR belief system. Politics transcends logic. Logic can only account for certain nuts and bolts issues, but cannot address core values or beliefs.

There's a reason why that old saying about never arguing religion or politics is there.

I am a conservative and I believe in the core values of that ideology. I believe in a strong military, and a philosophy of "peace through strong deterrence".

You may believe in a different set of values, and there's nothing wrong with that. But don't call my beliefs "wrong", because they are just that, beliefs. History will tell us who was "right".

>> His frustration led to snide
>>comments. I merely responded in kind.
>
>
>Wrong: you began our interchange with "Paranoia is not becoming of you
>Frank." And that "responded in kind" excuse is the same one you gave
>(in the very same post) to defend Bush's 527 smear campaigns against
>Kerry.

If you are a statistical man, you would know that there were FAR more democratic 527's than there were republican. Moveon.org is one of the biggest smear organizations around and there were many more.

And for the record, the swift boat guys were not connected with the Bush campaign, any more than Moveon.org was connected to Kerry.

> I don't think that's what Jesus meant when he encouraged his

>
>
><snip>
>>>Frank, most recently.
>>
>>When? Provide the thread. Frank has not blamed me for anything. He
>>and I may be at the opposite end of the political spectrum, but he's
>>not an idiot, and wouldn't make such a charge.
>
>
>On the contrary, the values you have gleefully demonstrated during our
>discussions have proven that you are a person who believes the end

>justifies the means, which locks you into the category of probable
>sock-puppeteers.

What? Whether the ends justify the means is dependant on the particular circumstance. See Frank, that's exactly what I mean, when I say that there are few universal absolutes. I believe in measuring responses based on the circumstance or relative to the situation.

On the other hand, it is not my style to pollute the newsgroup with the foul disgusting spam that has generally been associated with the "sock puppeteers". That's childish, immature, and counter productive. I prefer direct open debate. That's why I don't hide behind an anonymous "cartoon character".

It's hard to win people over to the pro-legal side when your fellow "defenders" break all sorts of rules and etiquette while trying to make their point.

And more to the point, the fact that you might "believe" that I am partaking in this sock puppet stuff, that is hardly proof that I am.

There are many possibilities as to who the sock puppeteers are. They could be regulars here. Or they could be people we've never seen before just looking to pit one against the other for little more than kicks and grins. But unless you can find a piece of proof that can positively identify who they are, any accusations that anyone makes is pure speculation.

>> Then again, he did call
>>you Dave McCampbell..... Only you know how accurate that was.
>
>
>I called Twisty many things in order to demonstrate the ridiculous
>nature of his accusation that I was five different hams (one of which
>was Leland, for reasons I can't even fathom).

But Frank, Twisty is a bona-fide mental case. No amount of logic and reverse psychology will work on him. You should know that. He does what he does for the attention that it brings him.

> Anyway, it was necessary
>to discredit Twisty's name-game because N7VCF was getting a shitload
>of harassment. It worked, and the harassment subsided after my own
>"counter-accusation" that he was Dave McCampbell.

But unless the "Dave McCampbell" accusation was true, what's the incentive for him to quit? A false accusation would only make him laugh at your inability to find what it is you seek, and would only serve to empower him further. That's human psychology 101.

Or should I now accuse you (and him) of sock puppeting so that you will stop believing that I am? According to your logic, that should work.....

>And for the record, I -still- don't know who Twisty really is and I
>-still- don't care.

Posting history would tend indicate otherwise.

GOOD MORNING!

I just finished a wonderful breakfast!
My boyfriend Twistie "CAME" up here and after we had a wonderful night of wild gay sex, he got up extra early and crapped in my 'ole lady's best china. I picked out the corn and sucked the shit off then I ate each turd! It was GRREEEEAAAATTTTT !!

Well it only makes sense. Why live with someone you don't like. Theres got to be some passion. Even when their your friend it's hard work, raising kids and everything else.

No, I'm claiming blow-hards like you and doug have been flapping your
pie holes about it for years, using it for an excuse to post some of
the most vile crap rec.radio.cb has ever seen.

I'm still doing my thing after all these years, without even so much
as a warning from the man. Put up or shut up.

What a freak. You stayed up all night posting this shit.

Now answer the questions:

1. How is the court ordered shrink working out for you?

2. How's the court ordered job hunt going?

3. How's the court ordered wage withholding going?

4. Have you made the rain report for jamming repeaters again, Doug?

5. Have you threatened to kick anyone elses ass, only to have them show
up at your section 8 slum and prove what a fucking coward you are, maggot?

http://n8wwm.4t.com/

Go lay down by your bowl, Adair.

And I suppose the "elmer", "ham" approach is to openly condone illegal
activity?

>You ignorantly and
>erroneously call people criminals for dxing merely beacuse you are
>unable to distinguish between a civil and criminal nature.

Call it "shock value". Too many people break the law, and then
trivialize it, in order to appease their conscience.

You are a perfect example of this by relentlessly arguing the
semantics of the situation, as if it really matters on the grand scale
who you have to pay the fine to. The point is that you are breaking
federal law.

You live in denial.

>Firstly, the only criteria you cited as your
>reason for calling one a "federal criminal", was "it was a rule enacted
>by the feds, so breaking it is a federal crime and makes one a federal
>criminal".

The FCC rules clearly provide both civil and criminal penalties for
rule violations depending on the circumstances involved. The potential
is there for criminal penalties. I never said that in 100% of the
case, this will happen and, in fact, I acknowledged that you stand a
good chance of never being caught. But despite the fact that you have
never been caught does not negate the truth of your commission of
illegal actions in violation of federal law.

> The manner in whcih you arrived at this decision, was
>referred by yourself as "progressive logic". This too, was decimated as
>you were reminded that the 70 mph speed limit also met your criteria.
>Changing your values in mid-argument, you now invoke that the penalty
>one receives is now your new criteria.

Once again, the 70 MPH speed limit thing was not mine. I never brought that up. In fact I was unaware that there was a federally mandated 70 MPH speed limit. The last I heard the 55 MPH limit was dropped and a few states (Montana I believe was one) actually had no speed limit on some highways. The increase in accident rate then forced them to impose a state mandated limit.

But assuming you are correct and that there is a federally mandated 70 MPH speed limit, it's not the same thing as the FCC rules. For one thing there are no "federal speed police" who will cite you for a violation of a federal law. Speeding laws are enforced on a state or local level, and are treated as summary offenses.

Radio law (The communications act of 1934 et al.) grants the FCC the power to enforce these laws on a federal level, and can certainly impose criminal fines and jail time for the most flagrant rule violators. People who have refused to allow FCC agents to inspect their stations, those who have refused to respond to NAL's, those who continued to operate illegally after being warned, know all too well what those stiff penalties incur.

>Heck, even when you were educated by other hammies on here regarding
>your ignorance claiming "roger beeps are illegal" you chose not to
>learn.

I am putting this issue to rest one can for all. I have written to the FCC for a definitive ruling on this subject. If they tell me it's ok, I'll eat my crow and tip my hat in your direction and it'll be the last time I'll bring up that subject.

>>That's the really funny part about this whole
>>thing. Twist will sit here and spin and
>>obfuscate and make all sort of excuses to
>>deny that what he (and you I guess) does is
>>illegal.

>> But the law is clear on this.

Yes, you clearly disregard it.

> You have no clue about the law,
>Dave. You illustrate it with your position on roger beeps and you
>solidified it when you claimed you used forensics in your argument.

I never claimed that I used "forensics" in my argument. I stated once that my process was similar to the process used by forensic criminalists when they do their job. That's a whole different context.

> You
>were to look up the term and learn its definition prior to using it in
>the futire so as not to embarrass yourself again.

There is nothing wrong with the context in which I used the term.

Chris, I just attached a 6 gauge ground wire to a 8 foot ground rod. The
distance is faily short, probably less than 20 feet. Radio seems fine on AM.
Plus a couple of hams on the CB, have said thet I definitely need a power
supply.

Actually not that much higher. 24-21. The iggles actually covered the
points.

>..but Iggles have no chance,,,they're cursed.

I've always believed in what I call the "Philadelphia Choke Syndrome".
The profession sports teams there sometimes manage to make the
playoffs, but then choke in the end with a few notable exceptions.

They are no more "my" locals than the people in Miami are "your"
locals. But I was surprised that as losers, the townies were fairly
orderly and subdued.

I never needed to "catch up", but when we're discussing a particular
failure mode in one application, and you bring up a different
application as a justification for a differing point, that does
nothing but cloud the point.

Yes, that is certainly possible. But not in the equipment that I've
worked on. There is no inductive components past the power supply
filter caps, with the exception of a small 10 uH RF blocking choke.
Hardly enough to generate enough "kick back" to reverse polarity.

>bench has seen more receivers while your's has seen more sweep-tube
>amps. Maybe not. I merely suggested a possibility.

I can accept that. My bench has probably seen the most 12V mobile
radios, with amplifiers a distant second. But the equipment which has
seen the most capacitor failures due to outgassing or explosion has
been the tube amps. In the solid state equipment, cap failures are
less obvious and usually not total. On older radios (25+ years) the
main cap failure mode is excessive deviation from original value. You
don't like the term "drying out", but whatever process is responsible
for this phenomenon is quite prevalent.

>>>Based on the fact that I've never experienced what you described, and

>cap. This in turn would cause a greater AC current in the good cap,
>and therefore more heating. So maybe the cap blew because of the extra
>heat in combination with the higher DC stresses. I can see how -that-
>could happen.

That's exactly what I told you a few posts back. Only I didn't use the
term A.C.. A leaky cap decreases D.C. resistance, which decreases A.C.
resistance as well. Nice of you to finally get my point.

Wait, you're trying to play with my head aren't you? Trying to make me
change my tune? That only works when the "tune" is sufficiently
different.

>>>Ok then. Any voltage has a DC component and an AC component.
>>
>>>Pure AC has no DC component, and pure DC has no AC component.
>>

>'interrupted direct current'.....etc. So the concept has since been
>simplified to say that any current has an AC component and a DC
>component.

You stated: "Any voltage has a DC component and an AC component. "

Then you stated: "Pure AC has no DC component, and pure DC has no AC
component."

Yet you cannot see how these two statements contradict each other?

If you change the first statement to: "Certain voltages have a DC
component and an AC component. ", then the two statements would not
conflict.

For the record, I agree with your second statement.

>>>The term
>>>"ripple" is literally defined as the AC component of a DC current,

>
>
>That's what I said. If the input power is 60 Hz then 120 Hz would be a
>harmonic, right?

Technically, it's not a harmonic, it is the result of the full wave
rectification process. But there would be harmonics of 120 hz, but at
a substantially reduced level.

>>>The term "ripple" is old and has been replaced by "pard", which

>>discharge faster, which results in less filtering of the ripple and it
>>increases.
>
>
>A capacitor blocks DC and passes AC; at least that's the simplified
>version of it's function.

Yes, that's the fundamental definition. But that does not describe
what is happening when a high capacity cap is used as a power supply
filter.

>So if you have a cap connected between a DC
>source and ground then the DC is blocked while any AC is passed to
>ground.

That depends on the reactance of the capacitor and the frequency of
the A.C.. In a power supply a large electrolytic cap acts much like a
battery, by providing a short duration storage for peak voltage in
order to "smooth" out the momentary loss of voltage between ripple
peaks. The higher the current draw of the supply, the more capacitance
you need to filter it effectively.

>>> When
>>>the load becomes large then so does the ripple, and if the cap has a
>>>high AC resistance then it will get hot very quickly.
>>
>>How? There is no A.C.! Pulsating D.C. does not switch polarity.

>Update your lexicon and then read it again.

There is still no A.C. If a voltage "swings" or "ripples" between +9V
and +10V, it is still keeping the cap charged in the proper polarity.
If the voltage swings negative, then you will have a problem, unless
the cap is a non-polarized electrolytic, like the type commonly found
in audio crossover circuits and other places.

>>>Just about everyone who has ever used a soldering iron thinks they can
>>>write a course on power supplies.
>>
>>Well considering that they were the very first thing that I studied
>>and built in tech school, it's pretty much basic stuff.
>
>
>I hate to break this to you but your tech school did a piss-poor job
>if the curriculum started with the study and construction of complex
>circuits before covering the basics.

That's HOW we studied the basics. How better to study Ohm's and Kirchoff's law, and basic D.C. and A.C. fundamentals than to use a basic building block, found in all electronic devices? What could be more basic than a power supply?

My tech school was a "hands-on" style of teaching. They could have bored everyone to tears by writing all sorts of math formulas on a chalk board and demonstrating how things were supposed to work. But it was much more rewarding and easier to relate to the circuits if we could actually see it work in real life.

>>> But the increased ripple can be caused by a
>>>host of factors, not the least of which (and to the suprise of many,
>>>the most common) is the AC resistance of the output capacitor, -not-
>>>the R/C time constant of the cap with respect to the source and load
>>>impedances (which, BTW, are in parallel).
>>
>>Of course the R/C is in parallel. The cap is across the load.

>The cap is in parallel with -both- the source and load impedances; and
>while the load impedance may be linear, that's rarely the case for the
>source impedance.

But resistances and impedances in parallel tend to act like resistors in parallel, and the results are similar. The source impedance, in the case of a power supply is what is contained in the rectifiers. The transformer is pretty much isolated at this point.

>Also, the capacitance of an electrolytic isn't a
>constant; it's non-linear with respect to the voltage (a factor of
>it's AC resistance, and another reason why audiophiles prefer motor
>caps over electrolytics).

Well of course! Look at any R/C time constance charge/discharge cycle and it's not a straight line. As the cap reaches 70% of it's capacity, the charge rate slows.

> Both these nonlinearities end up converting
>your overly-simplistic R/C time constant analysis into an integral
>function.

Call it what you will. My "overly simplistic" analysis covers the conditions of what is actually happening.

> The issue is further complicated because of the equivalent
>series resistance of the capacitor (which, BTW, is a factor of it's AC
>resistance, and is also non-linear).
>
>The concepts involved here don't need to be nearly as complicated as
>you make them out to be, yet you try to describe the complexities with
>over-simplified theory.

That sounds like double talk. How can a simple concept be described in overly simplistic complexities?

> It's like you are trying to describe baseball
>with dumbed-down Newtonian analysis. You still think you can write a
>course on the subject? I don't think so.

It's time to remind you of Occam's razor. I tend to use simple terms
when they fit. There's no need to be any more complicated than
necessary. My explanations were just that. I could have gone to the
trouble of mathematically explaining the whole deal, but that would be
far more effort than this thread deserves.

The complexities have been introduced by you in an effort to discredit
my explanations. While you can't deny them, you can inflate their
complexity and then accuse me of not explaining it thoroughly enough.

>>>A different scenario happens
>>>with high-voltage supplies because regulation is usually achieved with

>without noting it in their literature, and one of those diodes had
>shorted. The component appeared to be perfectly functional, showing a
>forward voltage drop characteristic of a typical silicon diode, but it
>was supposed to be -twice- that drop.

Ah, so instead of a 1.2V drop, it was only showing .6V? A change in
bias can certain cause a problem like that. But your example does not
negate my statement. You found that another component failed, which
resulted in a chain reaction failure. The cause of the failure was
found. But if you can't pin down the cause of failure to any other
component, you are left to consider that either the bad component
failed on its own, or it was subjected to a momentary stress beyond
its limits through some external event.

>So there are -many- possibilities that may or may -not- be obvious.

I respectfully disagree. There ARE other possibilities yes, but I
disagree that there are "many". A simple process of elimination will
whittle that number down to a few highly probable possibilities.

That's true of any fixed resistor. A constant current will flow at any
given fixed voltage.

> Cool the filament and the
>current will increase (light bulbs make pretty good wind-chill
>detectors). Heat the filament and the current will decrease (good for
>determining the temperature of a flame). All happen -irrespective- of
>voltage.

That's called an optical pyrometer, and I used to make them many moons
ago, when I worked at a company called Leeds and Northrup. A filament
will "glow" at a certain lightwave frequency at a given temperature.
You adjust the filament to "blend in" to the background flame or heat
source, and you can determine the temperature.

What you have are 3 factors (Voltage, current and resistance). When
you hold voltage constant, you can measure a change in temperature as
a change in current. But what if you increase the voltage? Will the
bulb not increase current and therefore temperature?

>>> IOW, the current density through a cross-section of filament
>>>is the same regardless of it's thickness or length.
>>
>>A 12V bulb will have a thicker filament than a 120V bulb for the same

I entered the term "capacitors drying out" into google and came up
with 63 links to the term used in a similar context to what I've
promoted here. I didn't have the time to read them all, but be my
guest if you are so inclined.

I accept your apology.

>only possible alternative to B.

What you described is commonly called the Affirming a Disjunct logical fallacy. Under the conditions you've described, this would be the case. But it does not apply to my example. You stated that you do not agree that a particular component has a high probability of failure, so the converse to that is that you believe it has a lower probability of failure. There are no other possibilities in this case. The syllogism stands as valid.

> The conclusion, therefore, is neither
>true nor false; it can have no more truth than your assumed premise.
>Just because I don't live at the North Pole doesn't mean I -must- live

Show me where I ever stated that people are either conservative or liberal.

>> Therefore, by extension, it can be assumed that
>>you then consider other components have a higher probability of
>>failure.
>
>
>Key word: "assumed". You assumed wrong, as is usually the case
>whenever people ASSume things.

What other possibilities are there? Other components either have a:

A. Higher probability of failure.
B. Lower probability of failure.
C. The same probability of failure.

>the LPF.

.5 mV won't even tickle the modulation in most radios. Certainly not
enough to make 100%.

BTW, there is no "need" to bypass the LPF. It's just that the radio
sounds better IMHO that way. The LPF overly restricts the audio
bandwidth and kills fidelity. If you like sounding like you're talking
into a paper cup, then fine. I admit that I'm somewhat of an audio
purist. I like smooth "broadcast quality" audio. That's my personal
preference. YMMV.

> Higher drive at mid-modulation will push the audio into
>compression earlier, which would easily account for your audio
>sounding "mushy and compressed", just as you described.

Yes it would. But that's not the reason in my case. What was that you
tried to say before about acknowledging other possibilities?

> My radio
>sounds just fine without the modification, so it's very likely that
>-your- book is in error.

There is no error in my book. It correlates with other radio alignment procedures.

Perhaps your book is in error. You assume that because it came from Radio Crap, it's infallible.

My procedure is similar to what other radios also prescribe. After all, there isn't much difference in the output that a given stock microphone presents.
The fact that your radio "sounds fine" is a matter of some subjectivity. I didn't say that the radios (Radio shack, Cobra and President versions of this chassis) that I've worked on sounded "bad", only that I felt that they sounded "better" with a modified LPF. Again, a matter of personal preference.

> Not only that, I'm suprised that a person of
>your self-proclaimed experience would not have suspected the error
>earlier -- after all, your own description of the audio quality is
>indicative of overmodulation.

Not at all. 5 mV is hardly too much audio drive. Both the mike preamp compression circuits and the modulation AMC were working properly. The compressed sound was due to lousy audio bandwidth, coupled to a microphone (A D-104) which didn't mate well with the audio bandpass characteristic that this radio with the LPF presented.

> Yet you didn't bother to find a more
>authoritative reference, or compare the calibration specification to
>that of similar radios (I did, and 50% modulation at 0.5mV is common
>for Uniden radios that come with the same mic).

Funny, I took a quick look through a bunch of different test procedures for various radios. Audio input ranged from 5 mV (Considering the gain of that mike preamp circuit, that's not surprising), to 10, 20, 50, 70 and 100 mV, to set the AMC. In NONE of them was there ever a call for anything less than that.

>You could have also
>compared the cal-spec the radio's rated mic sensitivity. But no, you
>decided -not- to look for the primary cause of the problem, assumed
>that the error was in the design and proceeded to chop the filter.

Again, read my lips, there was NO "problem". This was a personal taste modification made to improve the overall audio fidelity. I assumed nothing, however you are doing more than enough assuming for both of us.

>Dave, it's clear that in -both- electronics and politics you have a
>real problem accepting any possibilities outside the realm of your own
>prejudice.

No, what's clear is that you take a scenario, make many speculative
assumptions about the reasons for it, and then come to a conclusion
that's based on those erroneous assumptions. It's no wonder you are so
easily brainwashed by left-wing propaganda.

Like I said, there is nothing *valuable* you could tell me in a
hundred lifetimes, about that radio that I don't know, or haven't
experienced in one form or another. What you just recently learned, I
was doing 25 years ago. I've literally worked on over a hundred
versions of that radio. I used to sit there and play "what if" on my
own radio just for fun when I was bored and had nothing else to do.

I've designed controlled carrier modifications for it, FM receive and
transmit, 10 meter conversions, Digital readout frequency selection,
photocell LED and meter light dimmer circuits, wideband transmit and
receive, and a host of other things that I've long forgotten about.
Like I said, that chassis (in its various forms) has been one of my
all time favorites for the sheer ease at which the radio modified and
the overall capability of it.

>>>Thanks anyway, but I already used too much time pulling out the mods
>>>and restoring it to stock condition -- except for the faceplate. Got a

I saw it. Your "bonepile" is a bit larger than mine. I've been slowly
trashing the real junk, as I've pretty much "retired" from the CB-tech
scene. It's just not worth the time any more, as I've got far too much
on my plate these days. Being a parent takes up a lot of time.

I need a little more information. Do the radio lights actually dim
when this happens? I does seem to sound like a power supply issue, but
you should be able to talk farther from the mike (Which allows the
radio to not peak as highly) and if it's a simple supply problem, at
some point the radio will work ok if it isn't putting out full power.

The 2510 should not draw more than about 5 or 6 amps, depending on
whether the radio is totally stock, or whether the ALC has been
cranked open (Which will allow a 45 to 50 watts peak SSB output).

Pyramid supplies are not rated as one of the best (Although I have a
30 amp, and it seems to do alright), but I would think you are well
within the rating of it with your radio.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Have a great day!

>cranked open (Which will allow a 45 to 50 watts peak SSB output).

I have not modded this radio. I am waiting on a dummy load. I do have a
question. How high can I DK it and how how can I turn up the ALC, without
overdriving the final?

Vinnie S.

Got no problem with Yanks. Speak to them all the time on IRLP. It's your international policies that have you unrespected, not marketing.

Note: I serve in Signals, my Dad served in Vietnam and my Grandfather in WW2.

Do have a Hugh problem with your government though. Here's why.

You go to Iraq to 'liberate' people from a brutal dictator who torch people then do the same yourself. If you want credibility, every soldier found torturing Iraqi's should receive the death penalty. Any Aussie troop who did this would receive Life Imprisonment.

The Yankee Govt comes on TV and says 'where going to Iraq to bring democracy', then does the same thing Saddam did, torched innocent Iraqi's. Not good.

In effect, the US turned up in Iraq and did themselves what they where claiming they where there to stop.

You train your soldiers in the most stupid way I've ever seen. Eg. I saw on CNN the training of US troops and the training officers words "This is an Iraqi, what are you going do..what are you going do to him?" You've already built hatred amongst your troops before you leave.

Yes, we here Down Under did participate, but have we been found torching Iraqi's or mankind dumb arse comments like "It's fun to shoot Arabs" No.

Our troops (being in the Signal Corp myself) are trained about compassion and killing if massacre to protect your own life, or that of your comrades, that's why us Aussie's during Vietnam disobeyed instructions from dumb arse Yankee commanders. We went to your bases, got our supplies and fucked of quick. If the Viet Cong where looking for you, just told them where your base was as they watched US chopper after chopper fly in. It was an unwritten rule for Aussie's in Vietnam to "go to US troops, get supplied up and fuck off asap", before the Viet Cong attack.

Why did US troops walk along the top of rice paddies, smoking ciggies and make themselves so easily visible to the enemy. Us Aussies crawled through the rice fields, might take longer but you'll at least live..for now...

It was, after all our SAS who pinpointed targets for the US, weeks before the Iraq War was even announced. But Aussie troops (being smarter at war than the US or UK) simply took the weapons off the Iraqis and told them to take a hike, we didn't even keep them as POWs, therefore we couldn't make the mistakes the US did, nor could they claim that we did this or that.

The US is playing right into the terrorists hands, just like it made it so easy for the Viet Cong to kill you all before.

Now, Osama can use that footage of your people torturing Arabs and say 'look what the US really think of you!" If anything the US has helped the terrorists, not hindered them. Idiots.

I thought America was going to avoid suburban combat. So why are you now going house-to-house.

Sorry guys, but driving equipment from one end of the country to the other is not 'winning the war' as your President stated. IF that was WW2, that means that war was won once a few troops landed on the Normandy beaches. I don't think so.

Any of the POWs you have (both in Iraq, Afghan & Cuba) who weren't terrorists before sure as hell will be now!

It's the Vietnam War all over again. When (not if) we will see the last US troops being evacuated from Iraq as the 'insurgents' take over from a city building by chopper. (I'm sure many of you know the image I'm referring to from Vietnam)

And that's why so,, many people hate Yanks with a passion. I don't hate Yanks, but I hate your government and the way the US military operates, it's caused more allied deaths than anything else, terrosits included, since 1901.

I do however acknowledge that when it comes to equipment and supplies the US is second to none. When Darwin was raided in 1942 by Japs, the British weren't interested in helping us, but the US arrived and built in a matter of hours a series of hidden runways so our and your planes could come up behind Jap zeros by surprise. This worked. There is no way the Aussie army could have built those runways or re-tuned Spitfires in the time the US troops did. If only you could combine these skills with the morality and training of ANZACs and you'd have the best, and highly respected, army in the world, and would not be hated so much.

All in all, the US needs to think about how it trains its troops, currently they leave with a 'let's kill Iraqi's attititude' when you need to leave with a 'let's only kill those we have to' attitude.

Why do you think the #1 condition of us assisting you in Iraq was that (for the first time in our history) we would be under Australian, not US or UK command?

Simple, the UK had thousands of us killed-Gallipoli-WW1
The Yanks had more of us killed-Vietnam.

Australians today are only under the command of our commanders, as your commanders have seen us killed, time and time again. Ever notice how, whether it be East Timor, Iraq or tsunami affected areas that our Army doesn't change how it operates. We repair what we destroy as we go, don't take POWs, and do not get taught a hatred of the enemy before we leave. We are trained to protect ourselves, our assets, base etc, but never,, never in

my training have I been trained in the way your soldiers are. And you wonder why you now have a disaster on your hands?

Very wise words, from someone who understands human interaction. Too
often one person or the other in a couple thinks they can "reform" the
other person's bad habits. This only leads to misery and an eventual
breakup. When you sign up to the "for better or worse" deal, that
means you take the whole package, not just the parts you like. My wife

had to deal with my radios, and I had to deal with her smoking (Which fortunately she gave up when she was pregnant). That's is the nature of compromise. You compromise because underneath those surface differences, there is a greater bond of affection which should transcend those surface differences. But it should be everything in moderation. If important things in life are being postponed to address a specific hobby, then it's time for a little introspection.

Hmmm.... I suspect that this is not a simple insufficient current
"power supply" issue. The power supply may be related, but there's
something else in the mix that we don't know about yet.

>>I does seem to sound like a power supply issue, but

>question. How high can I DK it and how how can I turn up the ALC, without
>overdriving the final?

Is this the older version of the 2510 with the MRF-477 final in it?

If so, the radio is capable of between 45 and 50 watts of peak SSB
power (with the ALC cranked open). For best power with some protection
from distortion, you can safely run it up to between 35 and 40 watts.
It's also capable of about the same peak power on AM, which means that
you should not set the carrier power above 12 watts, if you want to

maintain enough headroom for 100% modulation.

Be careful though, the MRF 477 transistor is no longer manufactured, and there is no direct replacement for it. So if you blow it, your choices become limited. You might be able to locate someone who may still have old stock of the '477 (at a premium price), or you can retrofit another device, which can be done, but usually at a loss of peak power out.

Wasn't me in the first place, little oral boy. However, I did laugh
like hell when I saw the post. Sounds like somebody has you down pat.

Say, when ya coming over to take some more pictures? I wanna hang out
the "mopeydopey sucks poodle wong" sign just for you.

I have posted no such "crap". I make my case by the logic of the
points alone. I have no allegiance to Doug, nor do I condone the spam
that has been attributed to him.

>I'm still doing my thing after all these years, without even so much
>as a warning from the man. Put up or shut up.

So that makes it ok?

I would imagine that throughout history, people have "gotten away"
with all sorts of crimes. Law enforcement is not infallible. But, does

that excuse or diminish what they did?

If you subscribe to the theory that it's only illegal if you're caught, then I guess you have no grounds to bitch if someone swipes something valuable from your home or car, and no one catches them. After all, it's fair game until they're caught right?

Personally, I don't believe that DX'ing is a big deal. There are far worse infractions being committed. As long as other people are not being denied equal access to the airwaves, or there is no harmful interference being generated to other licensed services, then I really don't have a problem with it.

But I do get annoyed when certain people portray the attitude that they're somehow "entitled" to break the law, as if it's some sort of badge of honor.

Simple. Before the time of Christ the Jews used burnt offerings for atonement for sins. it's all covered in the books of Genesis, Exodus and Leviticus, Numbers and Deuteronomy. After a while though, the whole thing became routine and a tradition and more of a ritual, and meant nothing to them...(The Children of Isreal) and this is why Christ was sent, to be become the perfect atonement for our sins and give us access to the Father.

and No, I am not the one posting the stuff, but I thought I'd answer.

See Romans 3:10, 3:23, 10:9-10 and 10:13
